A firmware update has been made available to improve camera capabilities and to add functionality.

- For information about functions that have been added or modified, refer to the pages for "Firmware Update".
About Operating Instructions

This document, "Operating Instructions <Complete Guide>", includes detailed explanations of all the functions and operations of the camera.

❖ How to Use the <Complete Guide> (HTML)

Display on a PC
Example: Display in English
About Operating Instructions

Display on a smartphone
Example: Display in English

(A) Search field
Enter the term to search for and press [ ].
By entering multiple search terms separated by spaces, you can find pages that include all of the search terms you entered.
No distinction is made between upper and lower case or between single- and double-byte characters.

(B) ‘Contents’
Description pages open when you press headings.
Use [ ]/[] to open and collapse the ‘Contents’.

(C) Breadcrumbs
Indicates the location of the page that is currently open.
Press [ ] to return to the front page.

(D) ‘Back to Top’ button

(E) ‘Show Previous Page’ button/‘Show Next Page’ button
(F) ‘Show Contents’ button/’Close Contents’ button
When displaying on a smartphone, press [ ] to display the ‘Contents’.
Press [ ] to exit ‘Contents’.

❖ Symbols Used in This Document
Black icons show conditions in which these can be used, and gray icons show conditions in which these cannot be used.

Example:

Pictures/Videos

Recording mode

Operating symbols
About Operating Instructions

- Other symbols, such as icons shown on the camera screen, are also used in explanations.
- This document describes the procedure for selecting menu items as follows:
  Example: Set the [Picture Quality] of the [Photo] ([Image Quality]) menu

  ![Icon] ➔ [ ] ➔ [ ] ➔ [Picture Quality] ➔ Select [STD.]

- Images and illustrations used in this document are for explaining the functions.
- Description in this document is based on the interchangeable lens (H-ES12060).

1. Introduction

- Before Use: 19
- Standard Accessories: 22
- Lenses That Can Be Used: 24
- Memory Cards That Can Be Used: 25
- Names of Parts: 28
1. Introduction – Before Use

Before Use

- **Firmware of Your Camera/Lens**

Firmware updates may be provided in order to improve camera capabilities or to add functionality. Make sure that the firmware of the camera/lens you purchased is the latest version. We recommend using the latest firmware version.

  • To check the firmware version of the camera/lens, attach the lens to the camera and select [Firmware Version] in the [Setup] ([Others]) menu. You can also update the firmware in [Firmware Version].
  • For the latest information on the firmware or to download/update the firmware, visit the following support site:
    https://panasonic.jp/support/global/cs/dsc/
    (English only)

- **Handling of the Camera**

  When using the camera, take care not to drop it, bump it, or apply undue force. These may cause malfunction or damage to the camera and lens.

  If sand, dust, or liquid gets on the monitor, wipe it off with a dry soft cloth.
  – Touch operations may be incorrectly recognized.

  When using in low temperatures (−10 °C to 0 °C (14 °F to 32 °F))
  – Before use, attach a Panasonic lens with a minimum recommended operating temperature of −10 °C (14 °F).

  Do not place a hand inside the camera mount.
  This may cause a failure or damage because the sensor is a precision device.

  If you shake the camera while turning the camera off, a sensor may operate or a rattling sound may be heard. This is caused by the image stabilizer mechanism in the body. It is not a malfunction.
1. Introduction – Before Use

- **Splash Resistant**

  Splash Resistant is a term used to describe an extra level of protection this camera offers against exposure to a minimal amount of moisture, water or dust. Splash Resistant does not guarantee that damage will not occur if this camera is subjected to direct contact with water.

  In order to minimize the possibility of damage please be sure the following precautions are taken:
  - Splash Resistant works in conjunction with the lenses that were specifically designed to support this feature.
  - Securely close the doors, socket caps, contact points cover, etc.
  - When the lens or cap is removed or a door is open, do not allow sand, dust, and moisture to enter inside.
  - If liquid gets on the camera, wipe it off with a dry soft cloth.

- **Condensation (When the Lens, the Viewfinder or Monitor is Fogged Up)**

  • Condensation occurs when there are temperature or humidity differences. Take care as this may lead to soiling, mold, and malfunctions in the lens, viewfinder, and monitor.
  • If condensation occurs, turn off the camera and leave it for approx. 2 hours. The fog will disappear naturally when the temperature of the camera becomes close to the ambient temperature.

- **Be Sure to Perform Trial Recording in Advance**

  Perform trial recording in advance of an important event (wedding, etc.) to check that recording can be performed normally.

- **No Compensation Regarding Recording**

  Please note that compensation cannot be provided in the event that recording could not be performed due to a problem with the camera or a card.
1. Introduction – Before Use

❖ **Be Careful with Regard to Copyrights**

Under copyright law, you may not use the images and audio you have recorded for other than personal enjoyment without the permission of the copyright holder. Be careful because there are cases where restrictions apply to recording even for the purpose of personal enjoyment.

❖ **Also Read “Cautions for Use”** (→ **Cautions for Use: 750**)
1. Introduction – Standard Accessories

**Standard Accessories**

Check that all the accessories are supplied before using the camera.

- The accessories and their shape will differ depending on the country or area where the camera was purchased.
  For details on the accessories, refer to "Operating Instructions <Quick Start Guide>" (supplied).

- **Digital camera body**
  (This is referred to as camera in this document.)

- **Battery pack**
  (This is referred to as battery pack or battery in this document.)
  - Charge the battery before use.

- **Battery charger**
  (This is referred to as battery charger or charger in this document.)

- **AC adaptor**
  - This is used for charging and power supply.

- **USB connection cable**

- **Cable holder**

- **Shoulder strap**

- **Body cap**

- **Eye cup**

- **Hot shoe cover**

- **Cover for the battery grip connector**

- **Flash synchro socket cap**

*1 This is attached to the camera at the time of purchase.
1. Introduction – Standard Accessories

Items Supplied with DC-GH5M2L (Lens Kit Product)

• Interchangeable lens*2:
  H-ES12060 “LEICA DG VARIO-ELMARIT 12–60mm/F2.8–4.0 ASPH./POWER O.I.S.”
  – This lens is dust and splash resistant.
  – The recommended operating temperature is from −10 °C to 40 °C (14 °F to 104 °F).
• Lens hood
• Lens cap*3
• Lens rear cap*3

Items Supplied with DC-GH5M2M (Lens Kit Product)

• Interchangeable lens*2:
  H-FS12060 “LUMIX G VARIO 12–60mm/F3.5–5.6 ASPH./POWER O.I.S.”
  – This lens is dust and splash resistant.
  – The recommended operating temperature is from 0 °C to 40 °C (32 °F to 104 °F).
• Lens hood
• Lens cap*3
• Lens rear cap*3

*2 This is referred to as lens in these operating instructions.
*3 This is attached to the lens at the time of purchase.

• The memory card is optional.
• Consult the dealer or Panasonic if you lose the supplied accessories. (You can purchase the accessories separately.)
• Please dispose of all packaging appropriately.
• Keep small parts in a safe place out of the reach of children.
Lenses That Can Be Used

This unit can use the dedicated lenses compatible with the Micro Four Thirds™ System lens mount specification (Micro Four Thirds mount).

You can also use the Leica M Mount interchangeable lens by attaching the M Mount Adaptor (DMW-MA2M: optional).

❖ About the lens and functions

Depending on the lens used, certain functions, such as Auto Focus, Image Stabilizer, and zoom functions, may be disabled or operate differently.

• Refer to catalogs/websites for most current information regarding supported lenses.
  https://panasonic.jp/support/global/cs/dsc/
  (English only)

• The focal length noted on the Micro Four Thirds lens is equivalent to double when converted to the 35 mm film camera. (It will be equivalent to 100 mm lens when a 50 mm lens is used.)
1. Introduction – Memory Cards That Can Be Used

Memory Cards That Can Be Used

You can use the following memory cards with this camera. (As of May 2021)

<table>
<thead>
<tr>
<th>SD memory card/SDHC memory card/SDXC memory card (Maximum 256 GB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• SD memory card, SDHC memory card, and SDXC memory card are referred to by the generic name of card in this document.</td>
</tr>
<tr>
<td>• This camera supports cards compliant with UHS Speed Class 3 of the UHS-I/ UHS-II standard and Video Speed Class 90 of the UHS-II standard.</td>
</tr>
</tbody>
</table>

• For the latest information on memory cards with confirmed operation, check the following support site:
  https://panasonic.jp/support/global/cs/dsc/
  (English only)
When using the following functions, use cards that have the correct SD Speed Class, UHS Speed Class, and Video Speed Class.
- Speed classes are standards to guarantee the minimum speed necessary for continuous writing.

1. Introduction – Memory Cards That Can Be Used

- You can prevent the writing and deleting of data by setting the write-protect switch (A) on the card to "LOCK".
- The data stored on a card may be damaged due to electromagnetic waves, static electricity or a failure of the camera or card. We recommend backing up important data.
- Keep the memory card out of reach of children to prevent swallowing.

2. Getting Started

- Attaching a Shoulder Strap: 41
- Charging the Battery: 43
- Inserting Cards (Optional): 59
- Attaching a Lens: 63
- Adjusting the Monitor Direction and Angle: 69
- Setting the Clock (When Turning On for the First Time): 70
2. Getting Started – Attaching a Shoulder Strap

Attaching a Shoulder Strap

Attach a shoulder strap to the camera with the following procedure to prevent it from dropping.

1. 
2. 
2. Getting Started – Attaching a Shoulder Strap

- Pull the shoulder strap and check that it will not come out.
- Attach the opposite end of the shoulder strap with the same procedure.
- Use the shoulder strap around your shoulder.
  - Do not wrap the strap around your neck. It may result in injury or accident.
- Do not leave the shoulder strap where an infant can reach it.
  - It may result in an accident by mistakenly wrapping around the neck.
Charging the Battery

You can charge the battery either using the supplied charger, or in the camera body.
You can also turn on the camera and supply power from an electrical outlet.
• The battery that can be used with the camera is DMW-BLK22/DMW-BLF19. (As of May 2021)
  – You can also use DMW-BLF19 (optional), but since it has a smaller battery capacity than DMW-BLK22 (supplied/optional), it is recommended to use DMW-BLK22 (supplied/optional).

• The battery is not charged at the time of purchase. Charge the battery before use.
Charging with the Charger

Charging time: Approx. 230 min

• Use the supplied charger and AC adaptor.
• The indicated charging time is for when the battery has been discharged completely. The charging time may vary depending on how the battery has been used.
  The charging time for the battery in hot/cold environments or a battery that has not been used for a long time may be longer than normal.

• Use the products supplied with the camera for charging.
• Use the charger indoors.
2. Getting Started – Charging the Battery

1. Connect the charger and the AC adaptor with the USB connection cable.
   • Check the direction of the terminals and plug in/out straight holding onto the plug.
   (Inserting at an angle can deform the terminal and cause malfunction.)

2. Connect the AC adaptor to an electrical outlet.

3. Insert the battery.
   • The [CHARGE] light (A) blinks and charging begins.

• Do not use any other USB connection cables except the supplied one.
  This may cause malfunction.
• Do not use any other AC adaptors except the supplied one.
  This may cause malfunction.
2. Getting Started – Charging the Battery

[CHARGE] Light Indications

<table>
<thead>
<tr>
<th>Charging status</th>
<th>0 % to 49 %</th>
<th>50 % to 79 %</th>
<th>80 % to 99 %</th>
<th>100 %</th>

<tbody>
<tr>
<td>[CHARGE] light</td>
<td>(A) Blinking</td>
<td>(B) (A)</td>
<td>(B) (A)</td>
<td>(C)</td>
</tr>
</tbody>
</table>

(A) Blinking
(B) On
(C) Off

- When the battery is inserted while the charger is not connected to the power source, the charging lights turn on for a certain period to allow you to confirm the battery level.

- After charging, disconnect the power source connection and remove the battery.
- If the [50%] light is blinking quickly, then charging is not occurring.
  - The temperature of the battery or surroundings is either too high or too low. Try charging at an ambient temperature between 10 °C and 30 °C (50 °F and 86 °F).
  - The terminals of the charger or the battery are dirty. Remove the connection to the power source, and wipe with a dry cloth.
2. Getting Started – Charging the Battery

### Battery Insertion

- Always use genuine Panasonic batteries (DMW-BLK22/DMW-BLF19).
  - DMW-BLF19 (optional) has a smaller battery capacity than DMW-BLK22.
- If you use other batteries, we cannot guarantee the quality of this product.

- Check that this unit is turned off.

1. Check that the lever (A) is holding the battery in place.
2. Getting Started – Charging the Battery

✓ Removing the Battery

1. Set the camera on/off switch to [OFF].
2. Open the battery door.
   • Check that the card access light turned off and then open the battery door.
     (Card Access Indications: 60)
3. Push the lever (A) in the direction of the arrow and then remove the battery.

- Ensure that no foreign objects are adhering to the inner side (rubber seal) of the battery door.
- Remove the battery after use.
  (The battery will drain if left inserted in the camera for a long period of time.)
- The battery becomes warm after use, during charging, and immediately after charging.
  The camera also becomes warm during use. This is not a malfunction.
- Be careful when removing the battery as the battery will jump out.
2. Getting Started – Charging the Battery

**Inserting a Battery into the Camera for Charging**

**Charging time: Approx. 220 min**

- Using the camera body and the supplied AC adaptor.
- The indicated charging time is for when the battery has been discharged completely.
- The charging time may vary depending on how the battery has been used.
- The charging time for the battery in hot/cold environments or a battery that has not been used for a long time may be longer than normal.

- **Use the products supplied with the camera for charging.**
- **The battery in the Battery Grip (DMW-BGGH5:optional) cannot be charged.**
2. Getting Started – Charging the Battery

1. Set the camera on/off switch to [OFF].
2. Insert the battery into the camera.
3. Connect the camera USB port and the AC adaptor using the USB connection cable.
   - Check the direction of the terminals and plug in/out straight holding onto the plug.
     (Inserting at an angle can deform the terminal and cause malfunction.)
4. Connect the AC adaptor to an electrical outlet.
   - The charging light (A) blinks red and charging begins.

❖ Charging light Indications
(A) Charging light (red)
On: Charging in progress
Off: Charging complete
Flashing: Charging error
### 2. Getting Started – Charging the Battery

- You can also charge the battery by connecting a USB device (PC, etc.) and the camera with the USB connection cable. In that case, charging may take a while.
- Do not use any other USB connection cables except the supplied USB connection cables. This may cause malfunction.
- Do not use any other AC adaptors except the supplied one. This may cause malfunction.
- After charging, disconnect the connection to the power source.
- While the charging light is blinking red, charging is not possible.
  - The temperature of the battery or surroundings is either too high or too low. Try charging at an ambient temperature between 10 °C and 30 °C (50 °F and 86 °F).
  - The terminals of the battery are dirty. Remove the battery and wipe off the dirt with a dry cloth.
- Even when the camera on/off switch is set to [OFF] thus turning the camera off, it consumes power. When the camera will not be used for a long time, remove the power plug from the electrical outlet in order to save power.
2. Getting Started – Charging the Battery

❖ Power Supply
When a battery is inserted in the camera then charged with the AC adaptor (supplied), and the camera is turned on, you can record while supplying power.
• [ ] is displayed in the screen while power is being supplied.

- You can also supply power by using a USB connection cable to connect the camera and a USB device (PC, etc.).
- The battery cannot be charged while power is being supplied.
- Turn off the camera before connecting or disconnecting the AC adaptor.
- Remaining charge in the battery may decrease depending on usage conditions. When the battery level is depleted, the camera will turn off.
- If the temperature of the camera rises, [ ] may be displayed, recording may stop, and some functions may become unavailable temporarily. Wait until the camera cools down.
- Depending on the power supply capabilities of the connected device, it may not be possible to supply power.
Using the Camera While Supplying It with Power (Supplying Power/Charging)

Since this camera and the items supplied with the battery charger (DMW-BTC15: optional) are compatible with USB PD (USB Power Delivery), you can charge while the camera is being supplied with power. Connect the USB connection cable, AC adapter and AC cable of the battery charger (DMW-BTC15: optional) to the camera.

Charging time: Approx. 170 min

- Use the camera body and the AC adaptor supplied with the battery charger (DMW-BTC15: optional). The camera is turned off.
- The indicated charging time is for when the battery has been discharged completely. The charging time may vary depending on how the battery has been used. The charging time for the battery in hot/cold environments or a battery that has not been used for a long time may be longer than normal.

(A) USB connection cable
(B) AC adaptor
(C) AC cable
2. Getting Started – Charging the Battery

- Insert the battery into the camera.
- Connect using the USB connection cable of the battery charger (DMW-BTC15: optional).
- When the camera is on, charging will take longer than when the camera is off.
- Even when connecting with devices that support USB PD, you may not be able to charge while using the camera.
- If connecting with devices (PC, etc.) that do not support USB PD and turning the camera on, then this will supply power only.
- Turn off the camera before plugging or unplugging the power plug.
- Remaining charge in the battery may decrease depending on usage conditions. When the battery level is depleted, the camera will turn off.
- Depending on the power supply capabilities of the connected device, it may not be possible to supply power.
### 2. Getting Started – Charging the Battery

- (C) Using the battery in the Battery Grip

*The battery level indicated on the screen is approximate.*
2. Getting Started – Charging the Battery

• To ensure that safe products are used, we recommend that a genuine Panasonic battery pack is used. There is a possibility that other battery packs may lead to fire or explosion. Please be advised that we are not liable for any accident or failure occurring as a result of use of a counterfeit battery pack.
• Do not leave any metal items (such as clips) near the contact areas of the power plug. Otherwise, a fire and/or electric shocks may be caused by short-circuiting or the resulting heat generated.
• Do not use the AC adaptor or USB connection cables on other devices. This may cause a malfunction.
• Do not use USB extension cables or USB conversion adaptors.
• The battery can be charged even when it still has some charge left, but it is not recommended that the battery charge be frequently topped up while the battery is fully charged. (Since characteristic swelling may occur.)
• If there is a power outage or other problem with the electrical outlet, then charging may not complete successfully. Reconnect the power plug.
• Do not connect to keyboard or printer USB ports, or to USB hubs.
• If the connected PC enters sleep status, then charging/power supply may stop.
• If the battery indication does not go to \[\text{[ ]}\] even when charging is complete, the battery may be deteriorating. Try not to use that battery.
2. Getting Started – Charging the Battery

**[Power Save Mode]**

This is a function to automatically turn the camera to sleep (power save) status or turn off the viewfinder/monitor if no operation is performed for a set time. Reduces battery consumption.

 tanımlanmıştır. Reduces battery consumption.

> [ ][ ] [ ] Select [Power Save Mode]

Inserting Cards (Optional)

- Formatting Cards (Initialization): 62

This camera supports the double card slot function. When two cards are used, relay recording, backup recording, and allocation recording are available.

1. Match the orientation of the cards as shown in the figure and then insert them firmly until they click.
2. Getting Started – Inserting Cards (Optional)

• You can set the way to record to card slots 1 and 2:
  
  [ ] ➾ [ ] ➾ [Double Card Slot Function] ➾ [Double Card Slot Function]: 118

אשר:

Card Access Indications

The card access light (C) turns on while the card is being accessed.

• Do not perform the following operations during access. The camera may operate incorrectly or the card and recorded images may be damaged.
  – Turn off the camera.
  – Remove the battery or card or disconnect the power plug.
  – Subject the camera to vibration, impacts, or static electricity.
Removing a Card

1. Open the card door.
2. Push the card until it clicks and then pull the card out straight.

- The card may be warm just after the camera has been used.
2. Getting Started – Inserting Cards (Optional)

**Formatting Cards (Initialization)**

Format the cards with the camera before use in order to ensure optimal card performance.

- When a card is formatted, all of the data stored in the card is erased and cannot be restored. Save a backup of necessary data before formatting the card.

💡 ➤ [()] ➤ [()] ➤ Select [Card Format]

Settings: [Card Slot 1]/[Card Slot 2]

- Do not turn off the camera or perform another operation during formatting.
- Take care not to turn off the camera while formatting is in progress.
- If the card has been formatted with a PC or other device, format it again with the camera.
- You can format the card while keeping the camera settings information stored on the card:

  [()] ➤ [()] ➤ [Save/Restore Camera Setting] ➤ [Keep Settings While Format] ➤ [Save/Restore Camera Setting]: 505
Attaching a Lens

- **Attaching a Lens Hood: 66**

  - Check that the camera on/off switch is set to [OFF].
  - Change the lens in a location where there is not a lot of dirt and dust. If dirt or dust gets on the lens (⇒ *Dirt on the Image Sensor: 752*)
  - Change the lens while the lens cap is attached.

1

2
2. Getting Started – Attaching a Lens

When you have attached a lens that does not have a communication function with this camera, after turning on the camera, a message asking for confirmation of the lens information is displayed. You can register the focal length for the lens when you select [Yes]. (⇨[Lens Information]: 249)

• Insert the lens straight in.
  Inserting this at an angle to attach it may damage the camera lens mount.
2. Getting Started – Attaching a Lens

❖ Removing a Lens

1. While pressing the lens release button (B), rotate the lens in the direction of the arrow until it stops and then remove it.

- After removing the lens, be sure to attach the body cap and the lens rear cap.
Attaching a Lens Hood

For recording against strong backlight, a lens hood can reduce the inclusion of unwanted light in images and drop in contrast resulting from the irregular reflection of light that occurs within the lens. It allows you to take more beautiful pictures by cutting out excess light.

When attaching the lens hood (flower shape) supplied with the interchangeable lens (H-ES12060/H-FS12060)

Hold the lens hood by placing your fingers as shown in the figure.

- Do not hold the lens hood in such a way that it will become bent.
1. Align mark (A) (⊙) on the lens hood with the mark on the tip of the lens.

2. Rotate the lens hood in the direction of the arrow to align mark (B) (○) on the lens hood with the mark on the tip of the lens.

* Attach the lens hood by rotating it until it clicks.
2. Getting Started – Attaching a Lens

- Removing the Lens Hood (H-ES12060)

1. While pressing the lens hood button (C), rotate the lens hood in the direction of the arrow and then remove it.

- When carrying the camera

  • The lens hood can be attached in the reverse direction.

  Example: H-ES12060

1. Align mark (B) ( ) on the lens hood with the mark on the tip of the lens.
2. Attach the lens hood by rotating it in the direction of the arrow until it clicks.
2. Getting Started – Adjusting the Monitor Direction and Angle

Adjusting the Monitor Direction and Angle

At the time of purchase, the monitor is stowed in the camera body.

- The angles of adjustment are guides only.
- Do not apply an excessive force to the monitor. This may cause damage or malfunction.
- When not using the camera, close the monitor with the monitor surface facing in.
Setting the Clock (When Turning On for the First Time)

Clock Set: 70

When you turn the camera on for the first time, a screen to set the time zone and clock appears. Be sure to set these settings before use to ensure images are recorded with the correct date and time information.

Clock Set

1. Set the camera on/off switch to [ON].
   - When the camera is turned on, the status indicator lights up.
   - If the language select screen is not displayed, proceed to Step 4.

2. When [Please set the language] appears, press or .

3. Set the language.
   - Press ▲▼ to select the language and then press or .

4. When [Please set the time zone] appears, press or .
5 Set the time zone.
   • Press ▲▼ to select the time zone and then press 🕒 or 🕒.
   • If you are using Daylight Savings [●], press ▲. (The time will move forward by 1 hour.)
     To return to the normal time, press ▲ again.

(A) Time difference from GMT (Greenwich Mean Time)

6 When [Please set the clock] appears, press 🕒 or 🕒.
2. Getting Started – Setting the Clock (When Turning On for the First Time)

7 Set the clock.

▲▼: Select an item (year, month, day, hour, minute, or second).

To set the display order (B) and time display format (C)

Press ▲▼ to select the time zone [Style] and then press ▼ or ▲, the screen for setting the display order and time display format appears.
2. Getting Started – Setting the Clock (When Turning On for the First Time)

8 Confirm your selection.
   • Press  or  .

9 When [The clock setting has been completed.] appears, press  or  .

- If the camera is used without setting the clock, it will be set to "0:00:00 1/1/2021".
- Clock settings are maintained for approx. 3 months using the built-in clock battery even without the battery.
  (Leave the fully-charged battery in the camera for approx. 24 hours to charge the built-in battery.)
- [Time Zone] and [Clock Set] can be changed from the menu:
  – [ ] → [ ] → [Time Zone] (→ [Time Zone]: 594)
  – [ ] → [ ] → [Clock Set]
3. Basic Operations

- Intelligent Auto Mode: 101
- Recording Using Touch Functions: 108
Basic Recording Operations

- How to Hold the Camera: 75
- Recording: 77
- Selecting the Recording Mode: 79

How to Hold the Camera

To minimize camera shake, hold the camera so that it will not move during recording.

Hold the camera with both hands, keep your arms still at your side, and stand with your feet shoulder width apart.

- Hold the camera firmly by wrapping your right hand around the camera grip.
- Support the lens from below with your left hand.
- Do not cover the AF assist light (A) or microphone (B) with your fingers or other objects.

(A) (B)
3. Basic Operations – Basic Recording Operations

• **Vertical Orientation Detection Function**

This function detects when pictures were recorded with the camera held vertically orientated.

With the default settings, pictures are automatically played back vertically oriented.

• If you set [Rotate Disp.] to [OFF], pictures will be played back without being rotated.
  (⇒ [Rotate Disp.]: 600)

• When the camera is tilted significantly up or down, the vertical orientation detection function may not work correctly.

• You can set whether or not to record the camera’s vertical orientation information during video recording.
  [ ] ⇒ [ ] ⇒ [Vertical Position Info (Video)] (⇒ [Vertical Position Info (Video)]: 582)
3. Basic Operations – Basic Recording Operations

Recording

1 Adjust the focus.

- Press the shutter button halfway (press it gently).
- The aperture value (A) and shutter speed (B) are displayed. (When the correct exposure cannot be obtained, the indications blink in red.)
- Once the subject is in focus, the focus icon (C) lights. (When the subject is not in focus, the indication blinks.)
- You can also perform the same operation by pressing [AF ON].
2 **Start recording.**

- Press the shutter button fully (press it further).
- When recording videos, press the video rec. button. (⇒ 10. **Recording Videos**: 324)

- Recorded pictures can be displayed automatically by setting [Auto Review] of the [Custom] ([Monitor / Display (Photo)]) menu. You can also change the picture display duration to your preferred setting. (⇒ [Auto Review]: 564)
- With the default settings, you cannot take a picture until the subject is brought into focus.
  If you set [Focus/Shutter Priority] in the [Custom] ([Focus/Shutter]) menu to [BALANCE] or [RELEASE], you will be able to take a picture even when the subject is not in focus. (⇒ [Focus/Shutter Priority]: 553)
3. Basic Operations – Basic Recording Operations

Selecting the Recording Mode

1 Press the mode dial lock button (1) to release the lock.
   • The dial is locked if the mode dial lock button is depressed. Each press locks/unlocks the dial.

2 Rotate the mode dial (2) and adjust the recording mode.

Camera Setting Operations

When changing the camera settings, operate the camera using the following operation parts.

(A) Front dial  
(B) Rear dial  
(C) Control dial  
(D) [MENU/SET] button  
(E) Cursor buttons  
(F) Joystick  
(G) Touch screen
3. Basic Operations – Camera Setting Operations

- **Front Dial/Rear Dial**

  Rotate:
  Selects an item or numeric value.

- **Control Dial**

  Rotate:
  Selects an item or numeric value.
3. Basic Operations — Camera Setting Operations

❖ **Cursor Buttons**

![Cursor Buttons Image]

**Press:**
Selects an item or numeric value.

❖ **[MENU/SET] Button**

**Press:**
Confirms a setting.
• Displays the menu during recording and playback.
3. Basic Operations – Camera Setting Operations

❖ Joystick

The joystick can be operated in 4 directions by tilting it up, down, left and right and by pressing the center part.

(A) **Tilt:** Selects an item or numeric value, or moves a position.

- Place your finger on the center of the joystick before tilting. The joystick may not work as expected when the sides are pressed.

(B) **Press:** Confirms a setting.

- You can register [Operation Lock] to the Fn button to disable the operations of operating parts:

  [ ] ➔ [ ] ➔ [Fn Button Set] ➔ [Setting in REC mode] ➔ [Operation Lock]

  (⇒Fn Buttons: 471)
3. Basic Operations – Camera Setting Operations

Touch Screen
Operations can be performed by touching the icons, slide bars, menus, and other items displayed on the screen.

(A) Touch
Operation of touching and then lifting your finger from the touch screen.

(B) Drag
Operation of moving a finger while it touches the touch screen.

(C) Pinch (widen/narrow)
Operations of widening the distance between two fingers (pinch out) and narrowing the distance between two fingers (pinch in) while they are touching the touch screen.

- If you will use a commercially available monitor protection sheet, observe the precautions for the sheet.
  (Visibility and operability may be impaired depending on the type of monitor protection sheet.)
- Touch operations can be disabled:
  [ ] [ ] [Touch Settings] (Touch Settings: 559)
Monitor/Viewfinder Display Settings

- Setting the Viewfinder: 85
- Switching Between the Monitor and Viewfinder: 86
- Switching the Display Information: 88

Setting the Viewfinder

- Adjusting the Viewfinder Diopter

1. Rotate the diopter adjustment dial while looking through the viewfinder.
   - Adjust until you can clearly see the text on the viewfinder.
Switching Between the Monitor and Viewfinder

With the default settings, automatic viewfinder/monitor switching is set. When you look through the viewfinder, the eye sensor (A) works and the camera switches from monitor display to viewfinder display. You can switch to viewfinder display or monitor display with [LVF] button (B).

1. **Press [LVF].**

(C) Automatic viewfinder/monitor switching

(D) Viewfinder display

(E) Monitor display
3. Basic Operations – Monitor/Viewfinder Display Settings

• The eye sensor may not work correctly due to the shape of eyeglasses, the way the camera is held, or bright light shining around the eyepiece.
• During video playback or slide show, automatic viewfinder/monitor switching does not work.
• To focus when looking through the viewfinder:
  [ ] ➔ [ ] ➔ [Eye Sensor AF] (Eye Sensor AF: 557)
• The sensitivity of the eye sensor can be changed:
  [ ] ➔ [ ] ➔ [Eye Sensor] (Eye Sensor: 587)
3. Basic Operations – Monitor/Viewfinder Display Settings

Switching the Display Information

1. Press [DISP.].
   - The display information is switched.

(I) Without information
(J) Display without blinking highlights\(^2\)

\(^1\) Pressing ▲▼ switches the display information. ([Detailed information display: 731])

\(^2\) This is a screen without blinking highlights display that is shown when [Blinking Highlights] of the [Custom] ([Monitor / Display (Photo)]) is set to [ON]. In other than this screen, overexposed parts of the screen will blink. ([Blinking Highlights: 571])
Quick Menu

This menu enables you to quickly set functions that are frequently used during recording without calling up the menu screen. You can also change the Quick menu display method and the items to display.

1. **Display the Quick menu.**
   - Press [Q].

2. **Select a menu item.**
   - Press ▲▼◄►.
   - Selection is also possible by rotating ◀.
   - Selection is also possible by touching a menu item.
3. Basic Operations — Quick Menu

3 Select a setting item.
- Rotate 
- Selection is also possible by touching a setting item.

4 Close the Quick menu.
- Press the shutter button halfway.
- You can also close the menu by pressing [Q].

- Some items cannot be set depending on the recording mode or camera settings.
- The Quick menu can be customized:
  [ ] [ ] [Q.MENU Settings] (Quick Menu Customization: 490)
3. Basic Operations – Control Panel

Control Panel

This screen allows you to view the current recording settings on the monitor. You can also touch the screen to change the settings. In the [CREATIVE VIDEO] mode (Creative Video mode), the display changes to one especially for video. (Control Panel (Creative Video mode): 725)

1. **Display the control panel.**
   - Press [DISP.] several times.

2. **Touch the items.**
   - The setting screens for each of the items are displayed.

3. **Change the setting.**
   - Example) Changing the AF mode
     - Touch the setting item.
   - Refer to the pages explaining each item for information on how to change the settings.
3. Basic Operations – Control Panel

4 Touch [Set].
Steps 2 to 4 can also be changed using the following operations.

1 Press ▲▼◄► to select an item.
   • Selection is also possible by rotating ⬇️ or ⬆️.
2 Rotate 🔄 to change the settings values.

• Some items cannot be set depending on the recording mode or camera settings.
Menu Operation Methods

- **Menu operation**: 95
- **[Reset]**: 100

In this camera, the menu is used for setting a wide variety of functions and performing camera customizations. Menu operations can be performed using the cursors, joystick, dial, or by touch.

### Menu operation

**Configuration and operation parts of the menu**

The menu can be operated by pressing ➔ to move between menu screens. Use the operation parts indicated below to operate the main tab, the sub tab, the page tab, and menu items without moving to the corresponding menu levels.

- You can also operate by touching the icons, menu items, and setting items.

![Menu diagram](image)

(A) Main tab ([Q] button)
(B) Sub tab ( )
(C) Menu item ( )
(D) Page tab ( )
(E) Setting item
1. Display the menu.
   - Press .

![Menu Screen]

2. Select a main tab.
   - Press  to select a main tab and then press .
   - You can also perform the same operation by rotating  to select the main tab and then pressing  or  .

![Main Tab Menu]

---

3. Basic Operations – Menu Operation Methods
3. Basic Operations – Menu Operation Methods

3 Select a sub tab.
   ● Press ▲▼ to select a sub tab and then press ►.
   ● You can also perform the same operation by rotating ◀ to select the sub tab and then pressing ◀ or ◀.

   - If there are page tabs (F), then after the page tabs have finished switching, the next sub tab is switched to.

4 Select a menu item.
   ● Press ▲▼ to select a menu item and then press ►.
   ● You can also perform the same operation by rotating ◀ to select the menu item and then pressing ◀ or ◀.
3. Basic Operations — Menu Operation Methods

5 Select a setting item and then confirm your selection.
   • Press ▲▼ to select a setting item and then press ↵ or ↯.
   • You can also perform the same operation by rotating ⍁ to select the setting item and then pressing ↵ or ↯.

![Menu Screen]

6 Close the menu.
   • Press the shutter button halfway.
   • You can also close the menu by pressing [ màn ] several times.

![Menu Screen]

• For details about menu items, refer to Menu Guide. (➔ 14. Menu Guide: 507)
3. Basic Operations – Menu Operation Methods

❖ **Displaying Descriptions About Menu Items and Settings**
If you press [DISP.] while a menu item or setting item is selected, a description about the item is displayed on the screen.

❖ **Grayed Out Menu Items**
Menu items that cannot be set are displayed grayed out.
If you press or while a grayed out menu item is selected, the reason why it cannot be set is displayed.
The reason why a menu item cannot be set may not be displayed depending on the menu item.
Return each of the following settings to the default setting:
- Recording settings
- Network settings (settings of [Wi-Fi Setup], [Streaming Setup] and [Bluetooth])
- Setup and custom settings (other than [Wi-Fi Setup], [Streaming Setup] and [Bluetooth])

[Reset]

- If the setup and custom settings are reset, the [Playback] menu is also reset.
- If the setup and custom settings are reset, [Lens Information] in [Image Stabilizer] in the [Photo] ([Others (Photo)]) menu/[Video] ([Others (Video)]) menu is also returned to the default setting.
- The folder numbers and clock settings are not reset.
- List of default settings and settings that can be reset (List of Default Settings/Custom Saving/Settings Available for Copying: 771)
Intelligent Auto Mode

The [iA] mode (Intelligent Auto mode) can record images using settings automatically selected by the camera. The camera detects the scene to set the optimal recording settings automatically to match the subject and recording conditions.

1. Set the mode dial to [iA].

2. Aim the camera at the subject.
   - When the camera detects the scene, the recording mode icon changes.
   (Automatic Scene Detection)
3. Basic Operations – Intelligent Auto Mode

3 Adjust the focus.
   • Press the shutter button halfway.
   • Once the subject is in focus, the focus icon lights.
     (When the subject is not in focus, the indication blinks.)
   • [ ] of the AF mode works and the AF area is displayed aligned to any humans.

4 Start recording.
   • Press the shutter button fully.

   • Backlight compensation operates automatically to prevent subjects from appearing dark when there is a backlight.
3. Basic Operations – Intelligent Auto Mode

❖ Types of Automatic Scene Detection

👩‍💻 : Scenes detected during picture taking
👨‍💻 : Scenes detected during video recording

👩‍💻 : i-Portrait

👨‍👩‍👧‍👦 : i-Portrait & Animal†

🏞️ : i-Scenery

🔍 : i-Macro
3. Basic Operations – Intelligent Auto Mode

- i-Night Portrait
- i-Night Scenery
- i-Food
- i-Sunset
- i-Low Light
3. Basic Operations – Intelligent Auto Mode

*1 Detected when animal detection is enabled.
*2 Detected when using an external flash.

- If none of the scenes are applicable, recording is with [iA] (standard setting).
- Different scene types may be selected for the same subject depending on the recording conditions.
3. Basic Operations — Intelligent Auto Mode

**AF Mode**

1. Changing the AF mode.
   - Each press of [ ] changes the AF mode.

   **[ ]/ [ ] ([Human Detect AF]/[Human/Animal Detect AF])**

   The camera detects a person’s face, eyes, and body (entire body, upper half of the body, or head) and adjusts the focus.

   When animal detection is enabled, animals, such as birds, canines (including wolves), and felines (including lions) will also be detected.

   - Each press of [ ] switches the person, animal or eye to be brought into focus. It cannot be switched by touching.

   - Animal detection will maintain the enable/disable setting selected during other than [iA] mode.
3. Basic Operations – Intelligent Auto Mode

[Tracking]

When the focus mode is set to [AFC], the AF area follows the movement of the subject, maintaining focusing.

1. Aim the AF area over the subject and then press and hold the shutter button halfway.
   - The camera will track the subject while the shutter button is pressed halfway or fully.

• For information about AF modes (Human Detect AF): 138, (Human/Animal Detect AF): 143

❖ Flash

When recording using a flash, the camera switches to the appropriate flash mode for the recording conditions.

When Slow Sync. ([ > ], [ > ]), be careful with regard to camera shake because the shutter speed becomes slow.

• For information about external flashes (Using an External Flash (Optional): 304)
Recording Using Touch Functions

- **Touch AF/Touch Shutter**: 108
- **Touch AE**: 111

### Touch AF/Touch Shutter

Touch functions allow you to focus on the point that you touch, release the shutter, etc.

- With the default settings, the Touch Tab is not displayed. Set [Touch Tab] to [ON] in [Touch Settings] in the [Custom] ([Operation]) menu. ([Touch Settings]: 559)
3. Basic Operations – Recording Using Touch Functions

1. Touch \( \text{[}] \).
2. Touch the icon.
   - The icon switches each time you touch it.

   ![Image of a person touching a screen]

   - \( \text{[} \text{AF}\text{]} \) (Touch AF)
     Focus on the Touched Position.
   - \( \text{[} \text{Shutter}\text{]} \) (Touch Shutter)
     Record with focus on the point touched.
   - \( \text{[} \text{OFF}\text{]} \)

3. (When set to anything other than OFF) Touch the subject.

   ![Image of a person touching a screen]
• When the Touch Shutter fails, the AF area first turns red and then disappears.
• Refer to "Operations on the AF area movement screen" for information about operations to move the AF area. (Operations on the AF area movement screen: 142)
• It is also possible to optimize the focus and brightness on the touched position:
  [ ] [ ] [Touch Settings] [Touch AF] [AF+AE] (Moving the AF Area by Touch: 161)
3. Basic Operations – Recording Using Touch Functions

**Touch AE**

This function adjusts the brightness according to a touched position. When a subject’s face appears dark, you can make the screen brighter to match the face.

- With the default settings, the Touch Tab is not displayed. Set [Touch Tab] to [ON] in [Touch Settings] in the [Custom] ([Operation]) menu. (⇒ Touch Settings: 559)

1. Touch [ ].
2. Touch [ ].
   - The Touch AE settings screen appears.

![Image of Touch AE settings screen]
3 Touch the subject to which you wish to adjust the brightness.
   • To return the position to which to adjust the brightness to the center, touch [Reset].

4 Touch [Set].

❖ How to Disable Touch AE
   Touch [\[\].

   • When the following function is being used, Touch AE is not available:
     – [Live Cropping]
   • You can also adjust both the focus and brightness to those of the position you touch. (At this time, Touch AE is not available):
     [ \[ ] ] \[ \[ ] ] \[Touch Settings\] \[Touch AF\] \[AF+AE\] \[Moving the AF Area by Touch: 161\]
4. Image Recording

- [Aspect Ratio]: 114
- [Picture Size]: 115
- [Picture Quality]: 116
- [Double Card Slot Function]: 118
- [Folder / File Settings]: 120
- [File Number Reset]: 123
4. Image Recording — [Aspect Ratio]

**[Aspect Ratio]**

You can select the image aspect ratio.

研究所 **[Camera] — 介面: 介面** Select [Aspect Ratio]

<table>
<thead>
<tr>
<th>Ratio</th>
<th>Description</th>

<td>RAW</td>
<td>This records RAW images.</td>
</tr>
</tbody>
</table>
• **Note on RAW**

RAW format refers to a data format of images that have not been processed on the camera.

Playback and editing of RAW images require the camera or the dedicated software.

- You can process RAW images on the camera. (⇒ [RAW Processing]: 460)
- Use software ("SILKYPIX Developer Studio" by Ichikawa Soft Laboratory) to process and edit RAW files on a PC. (⇒ SILKYPIX Developer Studio SE: 696)
- Pictures taken with [RAW] cannot be displayed enlarged to the maximum magnification during playback.

Take pictures with [RAW + FINE] or [RAW + STD.] if you want to check their focus on the camera after recording.

- RAW images are always recorded in the [L] size of the [4:3] aspect ratio.
- When you delete an image recorded with [RAW + FINE] or [RAW + STD.] on the camera, both the RAW and JPEG images will be deleted simultaneously.
- When the following functions are being used, [Picture Quality] is not available:
  - [6K/4K PHOTO]/[Post-Focus]
  - [Multiple Exposure]
**[Double Card Slot Function]**

This sets the way recording to the card slots 1 and 2 is performed.

![Image](image-url)

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
4. Image Recording – [Double Card Slot Function]

Notes about relay recording
• The following video cannot be continued to be recorded on another card:
  – [Loop Recording (video)]

Notes about Backup Recording
• We recommend using cards with the same Speed Class rating and capacity. If the card Speed Class or capacity is insufficient when video recording, recording to both cards stops.
• Backup recording is not available with the following video. They can only be recorded on a single card:
  – [Loop Recording (video)]
• When using the following combinations of cards, backup recording for videos, 6K/4K photos, and [Post-Focus] are not available:
  – SD/SDHC memory card, and SDXC memory card
Set the folder and file name where to save the images.

**Folder name**

100ABCDE

(1) Folder number (3 digits, 100 to 999)
(2) 5-character user-defined segment

**File name**

PABC0001.MP4

(3) Color space ([P]: sRGB, [ _ ]: AdobeRGB)
(4) 3-character user-defined segment
(5) File number (4 digits, 0001 to 9999)
(6) Extension
4. Image Recording – [Folder / File Settings]

[Select Folder] Selects a folder for storing images.

[Create a New Folder]
- Creates a new folder with an incremented folder number.
  - If there are no recordable folders in the card, a screen for resetting the folder number is displayed.

[OK]: Increments the folder number without changing the 5-character user-defined segment ((2) above).
[Change]: Changes the 5-character user-defined segment ((2) above). This will also increment the folder number.

[File Name Setting] [Folder Number Link]: Uses the 3-character user-defined segment ((4) above) to set the folder number ((1) above).
[User Setting]: Changes the 3-character user-defined segment ((4) above).

*1 When [Double Card Slot Function] is set to [Allocation Rec], [Select Folder (Slot 1)] and [Select Folder (Slot 2)] will be displayed.

Follow the steps on "Entering Characters" when the character entry screen is displayed. (Entering Characters: 609)
Available characters: alphabetic characters (upper-case), numerals, [ _ ]
4. Image Recording – [Folder / File Settings]

- Each folder can store up to 1000 files.
- File numbers are assigned sequentially from 0001 to 9999 in the order of recording.
  If you change the storage folder, a number continuing on from the last file number will be assigned.
- In the following cases, a new folder with an incremented folder number will be created automatically when the next file is saved:
  - The number of files in the current folder reaches 1000.
  - The file number reaches 9999.
- New folders cannot be created when there are folders numbered from 100 all the way up to 999.
  We recommend backing up your data and formatting the card.
- [Select Folder] is not available when [Backup Rec] in [Double Card Slot Function] is being used.
4. Image Recording – [File Number Reset]

**[File Number Reset]**

Refresh the folder number to reset the file number to 0001.

قم بتحديث رقم الملف للإعادة تعيينه إلى 0001.

1. Press the [ ] button, then press [ ] to select [File Number Reset].
2. The settings will display: [Card Slot 1]/[Card Slot 2].

- **When the folder number reaches 999, the file number cannot be reset.**
  We recommend backing up your data and formatting the card.
- **To reset the folder number to 100:**
  1. Perform [Card Format] to format the card. (➔ Formatting Cards
     (Initialization): 62)
  2. Perform [File Number Reset] to reset the file number.
5. Focus/Zoom

- Selecting the Focus Mode: 125
- Using AF: 127
- Selecting the AF Mode: 135
- AF Area Movement Operation: 158
- Record Using MF: 167
- Recording with Zoom: 174
Selecting the Focus Mode

1. Set the focus mode lever.

[S] ([AFS])
This is suitable for recording still subjects.
When the shutter button is pressed halfway, the camera focuses once.
The focus stays locked while the shutter button is pressed halfway.

[C] ([AFC])
This is suitable for recording moving subjects.
While the shutter button is pressed halfway, the focus is constantly adjusted
according to the movement of the subject.
• This predicts the movement of the subject, maintaining focusing. (Movement prediction)

[MF]
Manual focusing. Use this when you want to fix the focus or avoid activating AF.
(⇒ Record Using MF: 167)
5. Focus/Zoom – Selecting the Focus Mode

- In the following cases, [AFC] works the same as [AFS] when the shutter button is pressed halfway:
  - [MF] mode
  - In low light situations
- This function is not available for Post-Focus recording.
5. Focus/Zoom – Using AF

Using AF

• [AF Custom Setting(Photo)]: 132

AF (Auto Focus) refers to automatic focusing. Select the focus mode and the AF mode appropriate for the subject and scene.

1 Set the focus mode to [S] or [C].
   • Set the focus mode lever. (Selecting the Focus Mode: 125)
5. Focus/Zoom – Using AF

2 Select the AF mode.
   • Press [ ] to display the AF mode selection screen, and set using or . (Selecting the AF Mode: 135)
   • Selection is also possible by pressing [ ].
   • In [IA] mode, each press of [ ] switches between [ ] and [ ]. (AF Mode: 106)

3 Press the shutter button halfway.
   • The AF operates.

   ![Focus Indicators]

5. Focus/Zoom – Using AF

Low illumination AF

• In dark environments, low illumination AF automatically operates, and the focus icon is indicated as [\text{\text{LOW}}].
• Achieving focus may take more time than usual.

Starlight AF

• If the camera detects stars in the night sky after determining low illumination AF, then Starlight AF will be activated.
  When focus is achieved, the focus icon will display [\text{\text{STM}}], and the AF area will be displayed on the area in focus.
• Edges of the screen cannot detect Starlight AF.

❖ [AF ON] button

You can also activate AF by pressing [AF ON].
5. Focus/Zoom – Using AF

• Subjects and recording conditions that make focusing difficult with AF mode
  – Fast-moving subjects
  – Extremely bright subjects
  – Subjects without contrast
  – Subjects recorded through windows
  – Subjects near shiny objects
  – Subjects in very dark locations
  – When recording subjects both distant and near
• You can change the operation of AF-ON so that AF prioritizes subjects close by.
  This function is useful when the camera mistakenly focuses on the background:
  [ ] [ ] [Fn Button Set] [Setting in REC mode] [AF-ON : Near Shift] (Fn Buttons: 471)
• You can change the operation of AF-ON so that AF prioritizes subjects far away.
  This function is useful when taking pictures through fences or nets:
  [ ] [ ] [Fn Button Set] [Setting in REC mode] [AF-ON : Far Shift] (Fn Buttons: 471)
• When the following operations are performed while recording with [AFC], it may
  take some time for the camera to focus:
  – When zooming from the wide-angle end to the telephoto end
  – When the subject is suddenly changed from one far away to one close by
• If using the zoom after achieving focus, the focus may be erroneous. In that
  case, re-adjust the focus.
• When camera shake reduces, it is possible to focus automatically:
  [ ] [Quick AF] (Quick AF: 557)
• You can change the settings so that AF does not function when the shutter button
  is pressed halfway:
  [ ] [Half-Press Shutter] (Half-Press Shutter: 556)
• The AF beep volume and sound can be changed:
  [ ] [Beep] [AF Beep Volume]/[AF Beep Tone] (Beep: 588)
Magnify the AF Area Position ([AF-Point Scope])

This magnifies the focus point when the AF mode is [ ], [ ], or [ ]. (In other AF modes, the center of the screen is magnified.)

You can check focus and observe an enlarged subject as with a telephoto lens.

1. Register [AF-Point Scope] to the Fn button. (Fn Buttons: 471)
2. Enlarge the AF area position by pressing and holding the Fn button.
   - When the screen is enlarged, pressing the shutter button halfway re-acquires focus in a small central AF area.
   - When the screen is enlarged, turn or to adjust the magnification. Use for more detailed adjustments.

- When the screen is enlarged, [AFC] changes to [AFS].
- When the following functions are being used, AF-Point Scope does not work:
  - Video recording/[Post-Focus]
  - [6K/4K Pre-Burst]
  - [Miniature Effect] ([Filter Settings])
  - [Multiple Exposure]
- You can change the display method of the magnified screen:
  - [ ] ➔ [ ] ➔ [AF-Point Scope Setting] (AF-Point Scope Setting: 556)
5. Focus/Zoom – Using AF

[AF Custom Setting(Photo)]

Select features of AF operation when recording using [AFC] that are appropriate for the subject and scene. Each of these features can be further customized.

1. **Set the focus mode to [AFC].** ([Selecting the Focus Mode: 125])

2. **Set [AF Custom Setting(Photo)].**

   - ![Set 1]
     - Basic general-purpose setting.

   - ![Set 2]
     - Suggested for situations where the subject moves at a constant speed in one direction.

   - ![Set 3]
     - Suggested when the subject moves randomly, and other objects may be in the scene.

   - ![Set 4]
     - Suggested for situations where the speed of the subject changes significantly.
5. Focus/Zoom – Using AF

- Adjusting AF Custom Settings

1. Press ➡️ to select the AF Custom setting type.
2. Press ▲▼ to select items and press ➡️ to adjust.
   - To reset settings to the default, press [DISP.].
3. Press 📷 or 🎥.

- When the following function is being used, [AF Custom Setting(Photo)] is not available:
  - [6K/4K PHOTO]

<table>
<thead>
<tr>
<th>[AF Sensitivity]</th>

(⇒[Custom1] to [Custom3]: 155)

*1 This is not displayed with the default settings. From [Show/Hide AF Mode] in the [Custom] ([Focus/Shutter]) menu, you can set the items to display on the selection screen. (⇒[Show/Hide AF Mode]: 555)

• When the following function is being used, [ ] is not available.
  – [Time Lapse Shot]
• When the focus mode is set to [AFC], [ ] is not available.
• When the following function is being used, the AF mode is fixed to [ ] (Human Detect AF):  
  – [Live Cropping]
• When the following function is being used, the AF mode is fixed to [ ]:
  – [Miniature Effect] ([Filter Settings])
• The AF mode cannot be set when using Post-Focus.
5. Focus/Zoom – Selecting the AF Mode

**[Human Detect AF]/[Human/Animal Detect AF]**

The camera detects a person’s face, eyes, and body (entire body, upper half of the body, or head) and adjusts the focus. With animal detection enabled, the camera will also detect animals, such as birds, canines (including wolves), and felines (including lions).

When the camera detects a person’s face (A)/(B) or body or an animal’s body (C)*1, an AF area is displayed.

*1 When the animal detection is enabled.

Yellow
AF area to be brought into focus.
The camera selects this automatically.

White
Displayed when multiple subjects are detected.

- Eye detection works only for the eyes inside the yellow frame (A).
5. Focus/Zoom – Selecting the AF Mode

- When a person’s eyes are detected, the eye closer to the camera will be brought into focus.
- The exposure will be adjusted to the face. (When [Metering Mode] is set to [ ])
- The camera can detect the faces of up to 15 people.
- The camera can detect a combined total of up to 3 human and animal bodies.
- If any humans or animals are not detected, the camera operates as [ ].

**Enable/Disable Animal Detection**

1. Press [ ] to display the AF mode selection screen.
2. Select [ ] and then press ▲.
   - This enables animal detection, and the icon changes to [ ].
   - Press ▲ again to disable animal detection.
5. Focus/Zoom – Selecting the AF Mode

Specify the Person, Animal, or the Person’s Eye to Bring into Focus

When the person or animal to be brought into focus is shown using the white AF area, you can change this to a yellow AF area.

**Touch operation**

Touch the person, animal or eye indicated with the white AF area.

- The AF area will change to yellow.
- Touching outside the AF area displays the AF area setting screen. Touch [Set] to set the (AF) AF area at the position touched.
- To cancel the setting, touch [AF].

**Button operation**

Press .

- Each press of  switches the person, animal or eye to be brought into focus.
- To cancel the settings specified, press .
5. Focus/Zoom – Selecting the AF Mode

❖ Move and Change the Size of the Yellow AF Area

You can move the yellow AF area to the position of the white AF area and replace the white AF area with the yellow AF area. If moving to a position outside an AF area, then the [ ] AF area will be set.

1. Press [ ] to display the AF mode selection screen.
2. Select [ ] or [ ] and then press .
3. Press ▲▼◄► to move the position of the AF area.

4. Rotate , , or to change the size of the AF area.
5. Press .
   - On the recording screen, press , or touch [ ] to cancel the AF area setting.
### Operations on the AF area movement screen

|                  |                | Second time: Returns the AF area size to the default setting. |
5. Focus/Zoom – Selecting the AF Mode

[Tracking]

When the focus mode is set to [AFC], the AF area follows the movement of the subject, maintaining focusing.

1 Start tracking.

• Aim the AF area over the subject, and press the shutter button halfway.
  The camera will track the subject while the shutter button is pressed halfway or pressed fully.
• If tracking fails, the AF area blinks red.
• When set to [AFS], the focus will be on the AF area position. Tracking will not work.
5. Focus/Zoom – Selecting the AF Mode

- In [ ] mode, while recording video, and while recording with [6K/4K Burst(S/S)], tracking will continue even if the shutter button is released. To cancel tracking, press [ ] or [ ], or touch [ ]. Tracking is also available with [AFS].
- Set [Metering Mode] to [ ] to continue to adjust the exposure as well.
- In the following, [ ] operates as [ ]:
  - [Monochrome]/[L.Monochrome]/[L.Monochrome D]/[L.Monochrome S] ([Photo Style])
  - [Sepia]/[Monochrome]/[Dynamic Monochrome]/[Rough Monochrome]/[Silky Monochrome]/[Soft Focus]/[Star Filter]/[Sunshine] ([Filter Settings])

Move the Position of the AF Area
1. Press [ ] to display the AF mode selection screen.
2. Select [ ] and then press [ ].
3. Press [ ] to move the position of the AF area.
   • You can also move the AF area by touching.
   • To return the position back to the center, press [DISP.].
4. Press [ ].
5. Focus/Zoom – Selecting the AF Mode

The camera selects the most optimal AF area to focus from 225 areas. When multiple AF areas are selected, all selected AF areas will be brought into focus. When the focus mode is set to [AFC], ensuring that the subject stays within the 225 areas during recording will ensure the subject stays in focus.

[225-Area]

Specify the [AFC] Start Point

When the focus mode is set to [AFC], you can specify at which area to start [AFC].

1. Set the focus mode to [AFC]. (⇒ Selecting the Focus Mode: 125)
2. Set [AFC Start Point (225-Area)] to [ON].
3. Press [ ] to display the AF mode selection screen.
4. Select [ ] and then press .
   • After performing Steps 1 and 2, the icon changes from [ ] to [ ].
5. Press ▲▼◀▶ to move the AF area to the start point.
   • You can also move the AF area by touching.
   • To return the position back to the center, press [DISP.].
6. Press .
5. Focus/Zoom – Selecting the AF Mode

- **[Zone (Vert./ Horz.)]**
  - Within the 225 AF areas, vertical and horizontal zones can be focused.
  - **Horizontal pattern**
    - ![Horizontal pattern image]
  - **Vertical pattern**
    - ![Vertical pattern image]

- **[Zone (Square)]**
  - Within the 225 AF areas, a central square zone can be focused.
    - ![Square pattern image]
**[Zone (Oval)]**

Within the 225 AF areas, a central oval zone can be focused.

- [Zone (Square)] is not displayed with default settings. Set [Zone (Square)] to [ON] in [Show/Hide AF Mode] in the [Custom] ([Focus/Shutter]) menu. ([Show/Hide AF Mode]: 555)
5. Focus/Zoom – Selecting the AF Mode

❖ Move and Change the Size of the AF Area

1. Press [ ] to display the AF mode selection screen.
2. Select [ ], [ ] or [ ] and then press ▼.
3. Press ▲▼◄► to move the position of the AF area.
   • You can also move the AF area by touching.

When [ ] is selected
• Press ▲▼ to switch to a horizontal pattern AF area.
• Press ◄► to switch to a vertical pattern AF area.

4. Rotate ◄►, ◄► or ◄► to change the size of the AF area.
   • You can also pinch out/pinch in the AF area to change the size.
   • The first press of [DISP.] returns the AF area position to the center. The second press returns the size of the AF area to the default.
5. Press .

• The display method for the AF area using 225-area focusing can be changed:
  [ ] ➔ [ ] ➔ [AF Area Display] ➔ [AF Area Display]: 567)
5. Focus/Zoom – Selecting the AF Mode

**[1-Area+]/[1-Area]**

**[1-Area+]**
Emphasis within a single AF area can be focused. Even when the subject moves out of the single AF area, the subject remains focused in a supplementary AF area (A).
• Effective when recording moving subjects that are difficult to track with [1-Area].

(A)

**[1-Area]**
Specify the point to be brought into focus.
5. Focus/Zoom – Selecting the AF Mode

Switching of Automatic Detection

Automatic detection is now available in the [1-Area+]/[1-Area] AF modes. When a part of a human or animal enters the [1-Area+]/[1-Area] AF area, the automatic detection AF area is indicated in yellow. Eye detection works when a person’s face is inside the AF area.

1. Press [ ] to display the AF mode selection screen.
2. Select [ ] or [ ] and then press .
   - Each press of switches automatic detection.
   - The automatic detection settings of [1-Area+] and [1-Area] are linked.

(A) Automatic detection: OFF ( / )
(B) [Human Detect AF]: ON ( / )
(C) [Human/Animal Detect AF]: ON ( / )

• Only 1 human or animal can be automatically detected in the AF area.
• You cannot change the person, animal or eye being focused on during automatic detection.

150
5. Focus/Zoom – Selecting the AF Mode

Move and Change the Size of the AF Area

1. Press [ ] to display the AF mode selection screen.
2. Select [ ]/ [ ]/ [ ] or [ ]/ [ ]/ [ ] and then press [ ].
3. Press [ ] to move the position of the AF area.
4. Rotate , , or to change the size of the AF area.
5. Press [ ].

• For information about detailed operations to move the AF area (Operations on the AF area movement screen: 142)
• Change the movement speed of a single AF area:
  [ ] ⇒ [ ] ⇒ [1-Area AF Moving Speed] ⇒ [1-Area AF Moving Speed]: 524)
5. Focus/Zoom – Selecting the AF Mode

[Pinpoint]

You can achieve a more precise focus on a small point. If you press the shutter button halfway, the screen that lets you check the focus will be enlarged.

- When the focus mode is set to [AFC], [+] is not available.
Move the Position of the AF Area

1. Press [ ] to display the AF mode selection screen.
2. Select [ ] and then press [ ].
3. Press [ ] to set the position of [ ] and then press [ ] or [ ].
   • The selected position on the screen will be enlarged.
   • The AF area cannot be moved to the edge of the screen.
4. Press [ ] to fine-adjust the position of [ ].

5. Press [ ] or [ ].
5. Focus/Zoom – Selecting the AF Mode

Operations on the Magnification Window

5. Focus/Zoom – Record Using MF

Record Using MF

MF (Manual Focus) refers to manual focusing. Use this function when you want to fix the focus or when the distance between the lens and the subject is determined and you do not want to activate AF.

1. Set the focus mode lever to [MF].
2 **Select the focus point.**
- Tilt the joystick to select the focus point.
- To return the point to be brought into focus to the center, press [DISP.].

3 **Confirm your selection.**
- Press .
- This switches to the MF Assist screen, and shows an enlarged display.
4 Adjust the focus.
The operations used to focus differ depending on the lens.

When using an interchangeable lens with a focus ring
**Rotate to (A) side:**
Focuses on nearby subject

**Rotate to (B) side:**
Focuses on distant subjects

When using the interchangeable lens having a focus lever
**Move to (C) side:**
Focuses on nearby subject

**Move to (D) side:**
Focuses on distant subjects

- The focusing speed varies depending on how far you move the focus lever.
When using an interchangeable lens with no focus ring

Press ▶: Focuses on nearby subject
Press ◀: Focuses on distant subjects
• Pressing and holding ◀▶ will increase the focus speed.
• Focus can also be adjusted by dragging the slide bar.

• This will display the in-focus portion highlighted with color. (Focus Peaking)
• A recording distance guideline is displayed. (MF Guide)
5. Focus/Zoom – Record Using MF

5 Close the MF Assist screen.
   • Press the shutter button halfway.
   • This operation can also be performed by pressing 📷.

6 Start recording.
   • Press the shutter button fully.
5. Focus/Zoom – Record Using MF

*1 When using an interchangeable lens with no focus ring, you can perform these operations after pressing ▼ to display the screen that lets you set the area to be enlarged.

• When the picture is displayed in windowed mode, you can enlarge the picture by approx. 3× to 6×; when the picture is displayed in full screen, you can enlarge the picture by approx. 3× to 20×.

• On the recording screen, you can rotate the focus ring to display the MF Assist screen. If the focus ring has been rotated to enlarge the display, the assist screen will be exited a short time after you cease the operation.
• You can also display the MF Assist screen by pressing the [  bại ].
• MF Assist and MF Guide may not display depending on the lens used. You can, however, display MF Assist by directly operating the camera using the touch screen or a button.
• During MF, pressing [AF ON] will activate AF.
• The recording distance reference mark indicates the position of the imaging surface. This becomes the reference when measuring the recording distance.

You can change the Focus Peaking sensitivity and the display method:
[  ] ➔ [  bại ] ➔ [Focus Peaking] (→ [Focus Peaking]: 524)

You can memorize the MF Assist position separately for vertical and horizontal orientations:
[  ] ➔ [ ']][' (Focus Switching for Vert / Hor] (→ [Focus Switching for Vert / Hor]: 166)

You can change the display method of the magnified screen:
[  ] ➔ [ ']][' (MF Assist] (→ [MF Assist]: 554)

You can change the MF Guide display units:
[  ] ➔ [ ']][' (MF Guide] (→ [MF Guide]: 555)

You can disable focus ring operation:
[  ] ➔ [ ']][' (Focus Ring Lock] (→ [Focus Ring Lock]: 555)

You can set the movement of the MF Assist position to loop:
[  ] ➔ [ ']][' (Looped Focus Frame] (→ [Looped Focus Frame]: 557)

The camera memorizes the focus point when you turn it off:
[  ] ➔ [ ][' (Lens Focus Resume] (→ [Lens Focus Resume]: 580)

The amount of focus movement can be set:
[  ] ➔ [ ][' (Focus Ring Control] (→ [Focus Ring Control]: 581)
Recording with Zoom

- Extended Tele Conversion: 176
- [Power Zoom Lens]: 180

Use the optical zoom of the lens to zoom to telephoto or wide-angle.
When taking pictures, use [Ex. Tele Conv.] to increase a telescopic effect without image deterioration.
When recording videos, use [Image Area of Video] to obtain the same telescopic effect as [Ex. Tele Conv.].

* For details about [Image Area of Video] (→ [Image Area of Video]: 348)

1 Perform zoom operations.
   (T): Telephoto
   (W): Wide-angle

Interchangeable lens with a zoom ring
Rotate the zoom ring.
Interchangeable lens that supports the power zoom (electrically operated zoom)
Move the zoom lever.
(The zoom speed varies depending on how far you move the lever.)
• If you set [Zoom Control] to an Fn button, you can operate the optical zoom slowly by pressing 
  or fast by pressing 

Interchangeable lens that does not support the zoom
The optical zoom is not available.

• The focal length is displayed on the recording screen.

• The focal length display can be hidden:
  [ ] ➔ [ ] ➔ [Focal Length] ➔ [Focal Length]: 571
5. Focus/Zoom – Recording with Zoom

Extended Tele Conversion

[Ex. Tele Conv.] enables you to take pictures that are further enlarged beyond what is available with the optical zoom, without any deterioration in image quality.

- The [Ex. Tele Conv.] maximum magnification ratio differs depending on the [Picture Size] set in the [Photo] ([Image Quality]) menu.
  - Set to [EX M]: 1.4x
  - Set to [EX S]: 2.0x

1. Set [Picture Size] to [M] or [S].
   - [ ] ➜ [ ] ➜ [ ] ➜ [Picture Size] ➜ [M]/[S]

2. Set [Ex. Tele Conv.].
   - [ ] ➜ [ ] ➜ [ ] ➜ [Ex. Tele Conv.]

[ZOOM]
Changes the zoom magnification.

[TELE CONV.]
Fixes the zoom magnification at the maximum.

[OFF]
Changing the Zoom Magnification

Button operation

1. Set [Ex. Tele Conv.] to [ZOOM].
   • [Ex. Tele Conv.] ➔ [ZOOM]
2. Set the Fn button to [Zoom Control]. (Fn Buttons: 471)
3. Press the Fn button.
4. Press the cursor buttons to operate the zoom.
   ▲▼: T (telephoto)
   ◄►: W (wide-angle)
   • Press the Fn button again, or wait a specified time to end zoom operation.
5. Focus/Zoom – Recording with Zoom

Touch operation

- With the default settings, the Touch Tab is not displayed.
  (⇒ [Touch Settings]: 559)

1. Set [Ex. Tele Conv.] to [ZOOM].
2. Touch [ ].
3. Touch [ ].
4. Drag the slide bar to operate the zoom.

(T): Telephoto
(W): Wide-angle

- To end Touch Zoom operations, touch [ ] again.
### 5. Focus/Zoom – Recording with Zoom

| When displaying the [Ex. Tele Conv.] setting screen using the Fn button, pressing [DISP.] allows you to change the [Picture Size] setting. |
| When the following functions are being used, [Ex. Tele Conv.] is not available: |
| - [6K/4K PHOTO] (when set to [6K 18M]) |
| - [RAW] ([Picture Quality]) |
| - [Toy Effect]/[Toy Pop] ([Filter Settings]) |
| - [Post-Focus] (when set to [6K 18M]) |
| - [Multiple Exposure] |
| When the following functions are being used, [ZOOM] is not available: |
| - [6K/4K PHOTO] |
| - [Post-Focus] |
5. Focus/Zoom — Recording with Zoom

### [Power Zoom Lens]

Sets the screen display and operations when using an interchangeable lens that is compatible with power zoom (electrically operated zoom).

- This may only be selected when using a lens that is compatible.

![Icon]

[Step Zoom] ➔ [ ] ➔ [ ] ➔ Select [Power Zoom Lens]

<table>
<thead>
<tr>
<th>[Step Zoom]</th>
<th>When it is set to [ON] and a zoom operation is performed, zooming stops at each decided focal point position. This setting does not work when recording video or 6K/4K photos with [6K/4K Pre-Burst].</th>
</tr>
</thead>
</table>
| [Zoom Speed] | You can set the zoom speed for zoom operations.  
- If you set [Step Zoom] to [ON], the zoom speed will not change.  
[Photo]: [H] (High speed)/[M] (Middle speed)/[L] (Low speed)  
[Video]: [H] (High speed)/[M] (Middle speed)/[L] (Low speed) |
| [Zoom Ring] | This may only be selected when a power zoom-compatible lens with a zoom lever and zoom ring is attached.  
When set to [OFF], the operations controlled by the zoom ring are disabled to prevent accidental operation. |
6. Drive/Shutter/Image Stabilizer

- Selecting the Drive Mode: 182
- Taking Burst Pictures: 184
- 6K/4K Photo Recording: 190
- Selecting Pictures from a 6K/4K Burst File: 197
- Post-Focus Recording: 207
- Recording with Time Lapse Shot: 216
- Recording with Stop Motion Animation: 221
- Time Lapse Shot/Stop Motion Animation Videos: 225
- Recording Using the Self-timer: 227
- Bracket Recording: 231
- [Silent Mode]: 239
- [Shutter Type]: 240
- Image Stabilizer: 243
Selecting the Drive Mode

You can switch the drive mode to Single, Burst, etc. to match the recording conditions.

1. **Rotating the drive mode dial.**

- **[Single]**
  Takes one picture each time the shutter button is pressed.

- **[Burst]** *(Taking Burst Pictures: 184)*
  Takes pictures continuously while the shutter button is pressed and held.

- **[6K/4K PHOTO]** *(6K/4K Photo Recording: 190)*
  When the shutter button is pressed, the pictures are recorded with [6K/4K PHOTO].

- **[Post-Focus]** *(Post-Focus Recording: 207)*
  When the shutter button is pressed, the pictures are recorded with [Post-Focus].

- **Time Lapse Shot/Stop Motion Animation** *(Recording with Time Lapse Shot: 216, Recording with Stop Motion Animation: 221)*
  Takes pictures with Time Lapse Shot or Stop Motion Animation.
6. Drive/Shutter/Image Stabilizer – Selecting the Drive Mode

Self-timer (Recording Using the Self-timer: 227)
Takes pictures when the set time elapses after the shutter button is pressed.

- The detailed setting screens for each drive mode can be called up with an Fn button:
  [ ] ➔ [ ] ➔ [Fn Button Set] ➔ [Setting in REC mode] ➔ [Drive Mode Setting] (Fn Buttons: 471)
Taking Burst Pictures

Takes pictures continuously while the shutter button is pressed and held.

1. Set the drive mode dial to [ ].
6. Drive/Shutter/Image Stabilizer → Taking Burst Pictures

2 Select the burst rate.

- [H] Takes high-speed burst pictures.

3 Close the menu.
- Press the shutter button halfway.

4 Start recording.
- Takes burst pictures while the shutter button is pressed fully.
6. Drive/Shutter/Image Stabilizer – Taking Burst Pictures

❖ Burst Rate

<table>
<thead>
<tr>
<th></th>
<th>Mechanical shutter, electronic front curtain</th>
<th>Electronic shutter</th>
<th>Live View when taking burst pictures</th>
</tr>
</thead>
<tbody>
<tr>
<td>[H] (High speed)</td>
<td>12 frames/second ([AFS]/[MF]) 9 frames/second ([AFC])</td>
<td>12 frames/second ([AFS]/[MF]) 7 frames/second ([AFC])</td>
<td>None ([AFS]/[MF]) Available ([AFC])</td>
</tr>
<tr>
<td>[M] (Medium speed)</td>
<td>7 frames/second</td>
<td>7 frames/second</td>
<td>Available</td>
</tr>
<tr>
<td>[L] (Low speed)</td>
<td>2 frames/second</td>
<td>2 frames/second</td>
<td>Available</td>
</tr>
</tbody>
</table>

* The burst rate may be lower depending on the settings for recording such as [Picture Size] and focus mode.

❖ Maximum Number of Frames Recordable

<table>
<thead>
<tr>
<th>[Picture Quality]</th>
<th>[FINE]/[STD.]</th>
<th>[RAW+FINE]/[RAW+STD.]/ [RAW]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[H] (High speed)</td>
<td>999 frames or more</td>
<td>108 frames or more</td>
</tr>
<tr>
<td>[M] (Medium speed)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>[L] (Low speed)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

* When recording under the test conditions specified by Panasonic. (Using an UHS-II compatible card.)
Recording conditions may reduce the maximum number of frames recordable.
* The burst rate will become lower during recording but pictures can continue to be taken until the card becomes full.
6. Drive/Shutter/Image Stabilizer – Taking Burst Pictures

- **Number of Pictures That Can Be Taken Continuously**

When you press the shutter button halfway, the number of pictures that can be taken continuously will appear on the recording screen.

Example) When 20 frames: [r20]
- Once recording starts, the number of pictures that can be taken continuously will decrease.
- When [r0] appears, the burst rate decreases.
- When [r99+] is displayed on the recording screen, you can take 100 or more burst pictures.
6. Drive/Shutter/Image Stabilizer — Taking Burst Pictures

**Focus when Taking Burst Pictures**

| Focus mode | [Focus/Shutter Priority]  
|            | [FOCUS] [BALANCE] [RELEASE]  
| [AFS]      | [Focus/Shutter Priority]: 553  
|            | Fixed to the focus of the first frame  
| [AFC]      | Estimated focus Normal focus  
| [MF]       | — Focus set with manual focus  

- When the subject is dark with [AFC], the focus is fixed to that of the first frame.
- With estimated focus, the burst rate takes priority and the focus is estimated to the extent possible.
- With normal focus, the burst rate may become slow.

**Exposure when Taking Burst Pictures**

<table>
<thead>
<tr>
<th>Focus mode</th>
<th>[H]</th>
<th>[M]/[L]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[AFS]</td>
<td>Fixed to the exposure of the first frame</td>
<td></td>
</tr>
<tr>
<td>[AFC]</td>
<td>The exposure is adjusted for each frame</td>
<td></td>
</tr>
<tr>
<td>[MF]</td>
<td>Fixed to the exposure of the first frame</td>
<td></td>
</tr>
</tbody>
</table>
6. Drive/Shutter/Image Stabilizer  --  Taking Burst Pictures

- It may take a while to save burst pictures. If you continue to take burst pictures while saving is in progress, the maximum number of frames recordable will be reduced. When taking burst pictures, we recommend using a high-speed card.
- Taking burst pictures does not work while you are using the following functions:
  - [Rough Monochrome]/[Silky Monochrome]/[Miniature Effect]/[Soft Focus]/[Star Filter]/[Sunshine] ([Filter Settings])
  - [Multiple Exposure]
6K/4K Photo Recording

With 6K Photo, you can take high-speed burst pictures at 30 frames/second and save the desired pictures, each made up of approx. 18 million pixels, extracted from their burst file.

With 4K photo, you can take high-speed burst pictures at 60 frames/second and save the desired pictures, each made up of approx. 8 million pixels.

• "6K PHOTO" is a high-speed burst picture function to extract and save the desired pictures from images with an aspect ratio for pictures of 4:3 or 3:2 and an effective picture size equivalent to the number of pixels (approx. 18 megapixels) for images of 6K size (around 6,000 wide × 3,000 high).

• Use a UHS Speed Class 3 or higher card when recording.
6. Drive/Shutter/Image Stabilizer – 6K/4K Photo Recording

1. Set the drive mode dial to [6K].

2. Select [Picture Size / Burst Speed].

   ![Picture Size / Burst Speed](image)

<table>
<thead>
<tr>
<th>Picture size</th>
<th>Burst rate</th>
<th>[Rec Quality]¹</th>
</tr>
</thead>
<tbody>
<tr>
<td>[6K 18M]</td>
<td>[4:3]: 4992×3744 [3:2]: 5184×3456</td>
<td>30 frames/second [6K/200M/30p]</td>
</tr>
<tr>
<td></td>
<td>[4K H 8M]</td>

</tr>
</tbody>
</table>

¹ Saved as 6K/4K burst files whose [Rec. File Format] is [MP4].
3 Select [Rec Method].

- **[6K/4K Burst]**
  - When you wish to capture the best moments of a fast-moving subject
  - Takes burst pictures while the shutter button is pressed.
  - Audio recording: None

- **[6K/4K Burst(S/S)]**
  - “S/S” is an abbreviation for start/stop.
  - When you wish to capture an unpredictable photo opportunity
  - Starts taking burst pictures when the shutter button is pressed. Pressing the button again stops taking burst pictures.
  - The start tone and stop tone are output.
  - Audio recording: Available (Audio is not played back during playback with the camera.)

- **[6K/4K Pre-Burst]**
  - When you wish to capture at the moment of a photo opportunity
  - Takes burst pictures for approx. 1 second before and after the moment the shutter button is pressed.
  - The shutter sound is output once only.
  - Recording duration: Approx. 2 seconds
  - Audio recording: None
4 Close the menu.
   • Press the shutter button halfway.

5 Start recording.
   • [Continuous AF] works and the focus is adjusted continuously during recording with AF.

[6K/4K Burst]
1 Press the shutter button halfway.
2 Press the shutter button fully and keep it pressed during recording.

(A) Press and hold
(B) Recording is performed

• Press the shutter button fully early because recording will take approx. 0.5 second to start after it is pressed fully.
6. Drive/Shutter/Image Stabilizer – 6K/4K Photo Recording

[6K/4K Burst(S/S)]
1. Press the shutter button fully to start recording.
2. Press the shutter button fully again to stop recording.

(C) Start (First)
(D) Stop (Second)
(E) Recording is performed

• You can add markers by pressing [Q] during recording. (Up to 40 markers per recording)
  This allows you to skip to the positions where you added markers when selecting pictures from a 6K/4K burst file.

[6K/4K Pre-Burst]
1. Press the shutter button fully.

(F) Approx. 1 second
(G) Recording is performed

• While the recording screen is displayed, the AF will operate constantly to continue focusing.
  The exposure is also adjusted continuously, except in [M] mode.
• When the subject is not at the center, use AF/AE Lock if you wish to lock the focus and exposure. (⇒ Locking Focus and Exposure (AF/AE Lock): 271)
6. Drive/Shutter/Image Stabilizer – 6K/4K Photo Recording

- In default settings, Auto Review operates, and a screen that lets you select pictures from a burst file will be displayed.
  - To continue recording, press the shutter button halfway to return to the recording screen.
  - For how to select and save pictures from a recorded 6K/4K burst file
    (Selecting Pictures from a 6K/4K Burst File: 197)

❖ [Pre-Burst Recording] ([6K/4K Burst]/[6K/4K Burst(S/S)])

The camera starts recording approx. 1 second before the shutter button is pressed fully, so you will not miss a photo opportunity.

 пенел [6K/4K PHOTO] Select [Pre-Burst Recording]

Settings: [ON]/[OFF]

- When [Pre-Burst Recording] is being used, [PRE] is displayed on the recording screen.
- The AF behavior and functionality restrictions when using [Pre-Burst Recording] are the same as for [6K/4K Pre-Burst].

- Setting ranges become the following with 6K/4K photo recording:
  - Shutter speed: 1/30 (1/60 when [4K H 8M] is set) to 1/16000
  - Exposure compensation: ±3 EV
- The file save method differs depending on the type of card.
  - SDHC memory card:
    - A new file will be created to continue recording if the file size exceeds 4 GB.
  - SDXC memory card:
    - Files are not divided for recording.
- If the temperature of the camera rises, [!] may be displayed, recording may stop, and some functions may become unavailable temporarily. Wait until the camera cools down.
- When [6K/4K Pre-Burst] or [Pre-Burst Recording] is set, the battery drains faster and the camera temperature rises. Set these settings only when recording.
• For 6K/4K photo, the menu items below are fixed to the following settings:
  – [Shutter Type]: [ELEC.]
  – [Picture Quality]: [FINE]
• With 6K/4K photo recording, the following functions are not available:
  – Flash
  – [Bracketing]
  – Program Shift
  – AF mode ( )
  – [MF Assist] (6K/4K Pre-Burst) only
• When you record in an extremely bright location or under lighting such as fluorescent or LED lighting, the coloring or brightness of the image may change or horizontal stripes may appear on the screen.
  Lowering the shutter speed may reduce the effect of horizontal stripes.
• The following functions are restricted when recording 6K/4K photos when connected to an external device (TV, etc.) via HDMI:
  – HDMI output is not possible during recording.
  – [6K/4K Pre-Burst] changes to [6K/4K Burst].
  – [Pre-Burst Recording] is not available.
• 6K/4K photo recording does not work while you are using the following functions:
  – [Rough Monochrome]/[Silky Monochrome]/[Miniature Effect]/[Soft Focus]/[Star Filter]/[Sunshine] ([Filter Settings])
  – [Multiple Exposure]
Selecting Pictures from a 6K/4K Burst File

You can select pictures from the 6K/4K burst files and save them.
• When continuing to select pictures from the Auto Review after recording 6K/4K photos, start the operation from either Step 2 or 3.

1 Select a 6K/4K burst file on the playback screen.  
   (⇒ Playing Back Pictures: 444)
   • Select an image with the [] or [] icon and then press ▲.
   • You can also perform the same operation by touching [] or [].

• If the images were recorded with [6K/4K Pre-Burst], proceed to Step 3.
2 **Roughly select the scene.**

- Drag the slide bar (A).
  - For information about how to use the picture selection slide view screen. ([Picture Selection Slide View Screen Operations: 202](#))
  - If the images were recorded with [6K/4K Burst] or [6K/4K Burst(S/S)], touching [ ] allows you to select the scene in the 6K/4K burst playback screen. ([6K/4K Burst Playback Screen Operations: 204](#))

3 **Select the frame to save.**

- Drag the picture selection slide view (B).
- You can also perform the same operation by pressing ◀►.
  - To continuously rewind or forward frame-by-frame, touch and hold ◀ /[ > ].
6. Drive/Shutter/Image Stabilizer – Selecting Pictures from a 6K/4K Burst File

4 **Save the picture.**

- Touch [ ] or [ ].
- A confirmation screen appears.

- The picture is saved in JPEG format ([FINE] picture quality).
- The recording information (Exif information), such as the shutter speed, aperture, and ISO sensitivity, is also saved with the picture that is saved.
Correcting Pictures After Recording
(Post-Recording Refinement)

Correcting Distortion in Pictures ([Reduce Rolling Shutter])

When saving pictures, correct any distortion caused by the electronic shutter (rolling shutter effect).

1. On the save confirmation screen in Step 4 (Selecting Pictures from a 6K/4K Burst File: 197), touch [Reduce Rolling Shutter].
   - If there is no effect even after using correction, after a message is displayed advising that there is no effect, the confirmation screen returns.

2. Check the correction result and then touch [Save].
   - To check the corrected and uncorrected versions of the picture, touch [Set/Cancel].

- The angle of view may become narrower if correction is performed.
- The correction may appear unnatural due to the movement of subjects.
Reducing Noise Caused by High Sensitivity ([6K/4K PHOTO Noise Reduction])

When saving pictures, reduce the noise that occurs due to high ISO sensitivity.

Settings: [AUTO]/[OFF]

- This is not applied to pictures saved with [6K/4K PHOTO Bulk Saving].

3. Select the first frame of the pictures to be saved all at once and then press ◀ or ◀ .
   • The pictures are saved as a group of burst pictures in JPEG format.
Post-Focus Recording

- Selecting the Focus Point for the Picture to Save: 211
- Focus Stacking: 213

Taking burst pictures with the same image quality as 6K/4K photos while automatically changing the focus point.

You can select the focus point for the picture to save after recording. Also Focus Stacking lets you combine images with multiple focus points. This function is suitable for subjects that do not move.

1. Perform burst 6K/4K photo recording while automatically shifting the focus.

2. Touch the desired focus point.
6. Drive/Shutter/Image Stabilizer – Post-Focus Recording

3 A picture with the desired focus point is made.

4 Use a UHS Speed Class 3 or higher card when recording.
   • If you are going to perform Focus Stacking after recording, we recommend using a tripod during recording.

1 Set the drive mode dial to [ ].

2 Set the image quality for [Post-Focus].
   • [ ] [ ] [Post-Focus] [6K 18M]/[4K 8M]
3 Close the menu.
   • Press the shutter button halfway.

4 Decide on the composition and then adjust the focus.
   • Press the shutter button halfway.
   • AF detects the focus point on the screen. (Excluding the edges of the screen)
     
     (A)

   • If no areas on the screen can be brought into focus, the focus icon (A) blinks and recording is not possible.
   • Maintain the same distance to the subject and the same composition until recording finishes.
5 Start recording.
   • Press the shutter button fully.

   • Recording is performed while automatically changing the focus point. When the icon (B) disappears, recording ends automatically.
   • A video will be recorded with [Rec. File Format] set to [MP4]. (Audio will not be recorded.)
   • In default settings, Auto Review operates, and a screen that lets you select the focus point will be displayed. (Selecting the Focus Point for the Picture to Save: 211)

   • Since recording is performed with the same image quality as 6K/4K photos, limitations apply to recording functions and menus.
   • Focus settings cannot be changed during Post-Focus recording.
   • When the following functions are being used, [Post-Focus] is not available:
     – [Rough Monochrome]/[Silky Monochrome]/[Miniature Effect]/[Soft Focus]/[Star Filter]/[Sunshine] ([Filter Settings])
     – [Multiple Exposure]
Selecting the Focus Point for the Picture to Save

1. Select a Post-Focus image on the playback screen. *(Playing Back Pictures: 444)*
   - Select an image with the [ ] icon and then press .
   - You can also perform the same operation by touching the [ ] icon.

2. Touch the focus point.
   - When the point is in focus, a green frame appears.
   - If there is no picture with the selected point in focus, a red frame appears.
     A picture cannot be saved.
   - The edge of the screen cannot be selected.

3. Save the picture.
   - Touch [ ].
   - The picture is saved in JPEG format.
## Focus Point Selection Operations

<table>

</tr>
<tr>
<td>[ ]</td>
<td>Touch</td>
<td>Saves the picture.</td>
</tr>
</tbody>
</table>

* You cannot display an image on a TV screen and then select the focus point.
Focus Stacking

By merging multiple focus points, you can save pictures that are focused from the foreground through to the background.

1. Touch \[ \text{ ] } \text{ on the screen for selecting the focus point. (⇒ Selecting the Focus Point for the Picture to Save: 211) }

   * You can also perform the same operation by pressing [ ].
6. Drive/Shutter/Image Stabilizer – Post-Focus Recording

2 Select the merging method.

[Auto Merging]
Automatically selects pictures suitable for merging and then merges them into a single picture.

[Range Merging]
Merges pictures with selected focus points into a single picture.

3 (When [Range Merging] is selected) Touch the focus points.

- Select at least two points. Selected points are indicated with a green frame.
- The in-focus range between the two selected points is displayed in green.
- Ranges that cannot be selected are displayed in gray.
- To cancel the selection, touch a point with a green frame again.
- To select consecutive points, drag the screen.
6. Drive/Shutter/Image Stabilizer – Post-Focus Recording

4 Save the picture.
   - Touch [ ].

Operations when [Range Merging] Is Selected

<table>

</tr>
<tr>
<td>( )</td>
<td></td>
<td>Merges the pictures and saves the resulting picture.</td>
</tr>
</tbody>
</table>

- The picture is saved in JPEG format ([FINE] picture quality), and the recording information (Exif information), such as the shutter speed, aperture, and ISO sensitivity, of the picture with the closest point is also saved with the picture that is saved.
- Image misalignment due to camera shake will be adjusted automatically. If adjustments are made, the angle of view will become slightly narrower when the pictures are merged.
- If the subject moves during recording or the distance between subjects is great, merging may create an unnatural picture.
Recording with Time Lapse Shot

Pictures are taken automatically at a set recording interval. This feature is ideal for keeping track of changes over time in subjects such as animals and plants. The pictures taken will be saved as a set of group images that can also be combined into a video.

1. Set the drive mode dial to [ disdain ].

- Check that the clock is set correctly. (Setting the Clock (When Turning On for the First Time): 70)
- For long recording intervals, we recommend setting [Lens Focus Resume] to [ON] in the [Custom] ([Lens / Others]) menu.
2 Set [Mode] to [Time Lapse Shot].

- 

Set the recording settings.

[Mode]

Switches between Time Lapse Shot and Stop Motion Animation.

[Shooting Interval Setting]

[ON]: Sets the interval before the next recording takes place.

[OFF]: Takes pictures without leaving recording intervals.

[Start Time]

[Now]: Starts recording when the shutter button is pressed fully.

[Start Time Set]: Starts recording at the set time.

[Image Count]/[Shooting Interval]

Sets the number of pictures and the recording interval to be taken.

- [Shooting Interval] is not displayed when [Shooting Interval Setting] is set to [OFF].

[Exposure Leveling]

Adjusts the exposure automatically to prevent large changes in brightness between adjacent frames.
4 Close the menu.
- Press the shutter button halfway.

5 Start recording.
- Press the shutter button fully.
  - When [Start Time Set] is set, the camera will enter into sleep status until the start time is reached.
  - During recording standby, the camera enters into sleep status when no operation is performed for a certain period of time.
  - The recording will stop automatically.

6 Create a video. (⇒ Time Lapse Shot/Stop Motion Animation Videos: 225)
- After the recording has stopped, select [Yes] on the confirmation screen to proceed to create a video.
  Even if you select [No], you can still create a video with [Time Lapse Video] in the [Playback] ([Process Image]) menu. (⇒ Time Lapse Video): 603)
6. Drive/Shutter/Image Stabilizer – Recording with Time Lapse Shot

Operations during Time Lapse Shot Recording

Pressing the shutter button halfway during sleep status will turn on the camera.

- You can perform the following operations by pressing [Q] during Time Lapse Shot recording.

<table>
<thead>
<tr>
<th>Operation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Continue]</td>
<td>Returns to the recording. (Only during recording)</td>
</tr>
<tr>
<td>[Pause]</td>
<td>Pauses the recording. (Only during recording)</td>
</tr>
<tr>
<td>[Resume]</td>
<td>Resumes the recording. (Only while paused)</td>
</tr>
<tr>
<td></td>
<td>• You can also press the shutter button to resume.</td>
</tr>
<tr>
<td>[End]</td>
<td>Stops the Time Lapse Shot recording.</td>
</tr>
</tbody>
</table>
Pictures recorded to more than one card cannot be combined into a single video.
The camera gives priority to achieving the standard exposure, so it may not take
pictures at the set interval or take the set number of pictures.
Furthermore, it may not end at the end time displayed on the screen.
Time Lapse Shot is paused in the following cases.
- When the charge on the battery runs out
- When you set the camera on/off switch to [OFF]
  You can set the camera on/off switch to [OFF] and replace the battery or card.
  Set the camera on/off switch to [ON] and then press the shutter button fully to
  resume recording.
  (Note that the images recorded after replacing the card will be saved as a
  separate set of group images.)
[Exposure Leveling] is not available if ISO sensitivity is set to other than [AUTO]
in [M] mode.
[Time Lapse Shot] is not available when using the following functions:
- [Multiple Exposure]
Recording with Stop Motion Animation

Take pictures while moving the subject little by little. The pictures taken will be saved as a set of group images that can be combined into a stop motion video.

1. Set the drive mode dial to [ 

2. Set [Mode] to [Stop Motion Animation].

   - [ 
   - [ ]
   - [ | ]
   - [ | Time Lapse/Animation] ➔ [Mode] ➔ [Stop Motion Animation]

<table>
<thead>
<tr>

221
6. Drive/Shutter/Image Stabilizer – Recording with Stop Motion Animation

3 Set the recording settings.

[Mode]
Switches between Time Lapse Shot and Stop Motion Animation.

[Add to Picture Group]
Allows you to continue recording for a set of stop motion images that have already been recorded.
• Select an image and proceed to Step 5.

[Auto Shooting]
[ON]: Takes pictures automatically at a set recording interval.
[OFF]: This is for taking pictures manually, frame by frame.

[Shooting Interval]
Sets the recording interval for [Auto Shooting].

4 Close the menu.
• Press the shutter button halfway.
5 Start recording.
- Press the shutter button fully.
- Take pictures repeatedly while moving the subject little by little.
- The recording screen displays up to two pictures taken previously. Use them as reference for the amount of movement.
- You can play back the recorded stop motion images by pressing [▶] during recording.

Press [▶] to delete unnecessary images.
To return to the recording screen, press [▶] again.

6 Stop recording.
- Press [REC] and then select [Time Lapse/Animation] from the [Photo] menu to stop recording.
6. Drive/Shutter/Image Stabilizer — Recording with Stop Motion Animation

7 Create a video. (Time Lapse Shot/Stop Motion Animation Videos: 225)

• After the recording has stopped, select [Yes] on the confirmation screen to proceed to create a video. Even if you select [No], you can still create a video with [Stop Motion Video] in the [Playback] ([Process Image]) menu. (Stop Motion Video: 603)

• Up to 9999 frames can be recorded.
• If the camera is turned off while recording, a message for resuming the recording is displayed when it is turned on. Selecting [Yes] allows you to continue the recording from the interruption point.
• The camera gives priority to achieving the standard exposure, so it may not take pictures at the set interval when the flash, etc. is used for recording.
• A picture cannot be selected from [Add to Picture Group] when it is the only one that was taken.
• [Stop Motion Animation] is not available when using the following functions:
  – [Multiple Exposure]
After performing Time Lapse Shot or stop motion recording, you can proceed to create a video.

- Recording with Time Lapse Shot: 216
- Recording with Stop Motion Animation: 221

- You can also create videos with [Time Lapse Video] (⇒ [Time Lapse Video]: 603) or [Stop Motion Video] (⇒ [Stop Motion Video]: 603) in the [Playback] menu.

1. Select [Yes] on the confirmation screen that appears after recording.

2. Set the options for creating a video.
6. Drive/Shutter/Image Stabilizer – Time Lapse Shot/Stop Motion Animation Videos

3 Select [OK].

* A video will be created in the [MP4] recording file format.

- [OK]
  Creates a video.

- [Rec Quality]
  Sets the video image quality.

- [Frame Rate]
  Sets the number of frames per second.
  The larger the number is, the smoother the video will be.

- [Sequence]
  [NORMAL]: Splices pictures together in recording order.
  [REVERSE]: Splices pictures together in reverse recording order.

- Videos cannot be created when the [System Frequency] is set to [24.00Hz (CINEMA)].
- Videos cannot be created if the recording time exceeds 29 minutes and 59 seconds.
- In the following cases, videos cannot be created if the file size exceeds 4 GB:
  – When an SDHC memory card is being used and a 4K [Rec Quality] is set
  – When an FHD [Rec Quality] is set
Recording Using the Self-timer

1. Set the drive mode dial to [()

2. Set the Self-Timer time. (→ Setting the Self-timer Time: 229)
   - When recording videos, set [Self Timer For Video] in [Self Timer Setting] of the [Video] ([Others (Video)]) menu to [ON].

3. Close the menu.
   - Press the shutter button halfway.

4. Decide on the composition and then adjust the focus.
   - Press the shutter button halfway.
   - The focus and exposure are fixed when the shutter button is pressed halfway.
6. Drive/Shutter/Image Stabilizer – Recording Using the Self-timer

5 **Start recording.**
- Press the shutter button (A) or video rec. button (B).
- After the self-timer light blinks, recording starts.
6. Drive/Shutter/Image Stabilizer – Recording Using the Self-timer

- **Setting the Self-timer Time**

**When taking pictures**

1. 
2. 
3. 
4. Select [Self Timer]

**When recording videos**

</tr>
</thead>
</table>
| [Custom Time]  | [ON]*1/[OFF]*1 | Sets whether or not to display the countdown on the recording screen when [Self Timer] is set to custom.
| [Custom Time]  | [SET] | [Display Countdown] ([ON]/[OFF]) | Sets whether or not to enable self timer during video recording.

---

*1 It will only be displayed when [Self Timer Setting] of the [Video] ([Others (Video)]) menu is selected.
6. Drive/Shutter/Image Stabilizer – Recording Using the Self-timer

- We recommend using a tripod when recording with the self-timer.
- When the following functions are being used, [ ] is not available:
  - [Simultaneous Record w/o Filter] ([Filter Settings])
  - [Bracketing]
  - [Multiple Exposure]
Bracket Recording

When the shutter button is pressed, the camera can record multiple images while automatically changing the setting value for exposure, aperture, focus or white balance (adjustment value or color temperature).

- Aperture Bracket can be selected in the following modes:
  - [A] mode
  - [M] mode (when ISO sensitivity is set to [AUTO])

- White Balance Bracket (Color Temperature) can be selected when the white balance is set to [1], [2], [3], or [4].

1. Set [Bracketing Type].

   ![Bracketing Type Setting][231]

   - [ ] ➤ [ ] ➤ [ ] ➤ [Bracketing] ➤ [Bracketing Type]
2 Set [More Settings].
   • For information about [More Settings], refer to page for each bracketing method.

3 Close the menu.
   • Press the shutter button halfway.

4 Focus on the subject and then take pictures.
6. Drive/Shutter/Image Stabilizer – Bracket Recording

❖ Setting Items ([Bracketing Type])

</tr>
</tbody>
</table>

Example when [Sequence]: [0/-/+] is set

(A) ← (1) ← (2) ← (3) ← (4) ← (5) → (B)

Example when [Sequence]: [0/+] is set

(A) ← (1) ← (2) ← (3) ← (4) ← (5) → (B)

(A) Focus: closer
(B) Focus: more distant

(1) 1st image, (2) 2nd image ... (6) 5th image ...

• Pictures recorded with Focus Bracket are displayed as images of one group.
6. Drive/Shutter/Image Stabilizer – Bracket Recording

❖ [More Settings] (White Balance Bracket)
1 Rotate , ﮃ or ﮄ to set the correction step and then press ﯿ or ﮃ.
   Horizontal direction ([A] - [B])
   Vertical direction ([G] - [M])
   • The correction step can also be set by touching ﯿ/_CTX]/_CTX].

❖ [More Settings] (White Balance Bracket (Color Temperature))
1 Rotate , ﮃ or ﮄ to set the correction step and then press ﯿ or ﮃ.
   • The correction step can also be set by touching ﯿ/_CTX].
6. Drive/Shutter/Image Stabilizer – [Silent Mode]

[Silent Mode]

This disables all operation sounds and light output at once. The audio from the speaker will be muted and the flash and the AF assist light will be set to forced off mode.

• The following settings are fixed:
  – [Flash Mode]: [ ] (Forced Flash Off)
  – [AF Assist Light]: [OFF]
  – [Shutter Type]: [ELEC.]
  – [Beep Volume]: [ ] (OFF)
  – [AF Beep Volume]: [ ] (OFF)
  – [E-Shutter Vol]: [ ] (OFF)

Select [Silent Mode] Settings: [ON]/[OFF]

• Even when [ON] is set, the following functions light/blink:
  – Status indicator
  – Charging light/NETWORK connection lamp
  – Card access light
  – Self-timer light

• Use this function at your own responsibility sufficiently considering the privacy, portrait, and other rights of subjects.
6. Drive/Shutter/Image Stabilizer – [Shutter Type]

**[Shutter Type]**

Selects the shutter type to use for taking pictures.

- **[AUTO]** Switches the shutter type automatically depending on the recording conditions and shutter speed.
- **[MECH.]** Records with the mechanical shutter type.
- **[EFC]** Records with the electronic front curtain type.
- **[ELEC.]** Records with the electronic shutter type.
- **[ELEC.+NR]** Records with the electronic shutter type. When pictures are taken at slower shutter speeds, the shutter is closed after recording to perform long shutter noise reduction.
6. Drive/Shutter/Image Stabilizer – [Shutter Type]

<table>
<thead>
<tr>
<th></th>
<th>Mechanical shutter type</th>
<th>Electronic front curtain type</th>
<th>Electronic shutter type</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Mechanism</strong></td>
<td>This type starts and ends exposure with the mechanical shutter.</td>
<td>This type starts exposure electronically and ends it with the mechanical shutter.</td>
<td>This type starts and ends exposure electronically.</td>
</tr>
<tr>
<td><strong>Flash</strong></td>
<td>✓</td>
<td>✓</td>
<td>—</td>
</tr>
<tr>
<td><strong>Shutter speed (sec.)</strong></td>
<td>[B] (Bulb, max. approx. 30 minutes)*1, 60 to 1/8000</td>
<td>[B] (Bulb, max. approx. 30 minutes)*1, 60 to 1/2000</td>
<td>[B] (Bulb, max. approx. 60 seconds)*1, 60 to 1/16000</td>

</tbody>
</table>

*1 This setting is available only in [M] mode.
*2 The electronic shutter sound can be set in [E-Shutter Vol] and [E-Shutter Tone] in [Beep] of the [Setup] ([IN/OUT]) menu. (⇒ [Beep]: 588)

- The electronic front curtain type reduces blur caused by the shutter because the amount of vibration from the shutter is small compared to the mechanical shutter type.
- The electronic shutter type allows you to record without vibration from the shutter.
• To reduce shutter-induced blur, you can set the shutter to release a few seconds after the shutter button is pressed:
  [ ] [ ] [Shutter Delay] ( [Shutter Delay]: 529)
• When [ ] is displayed on the screen, recording will be with the electronic shutter type.
• When a moving subject is recorded using the electronic shutter, the subject may appear distorted in the picture.
• When you record using the electronic shutter under lighting such as fluorescent or LED lighting, horizontal stripes may be recorded. In such a case, lowering the shutter speed may reduce the effect of horizontal stripes.
• When [Silent Mode] is being used, [Shutter Type] is fixed to [ELEC.].
Image Stabilizer

- **Image Stabilizer Settings**: 246

This camera can use both the in-body image stabilizer and the in-lens image stabilizer. Compatible with the Dual I.S. method, which effectively combines two image stabilizers, and the Dual I.S.2 method, which has a higher stabilizing effect. Furthermore, during video recording, you can use the 5-Axis Hybrid Image Stabilizer that incorporates electronic stabilization.
Combinations of lenses and image stabilizers (As of May 2021)
Image stabilizers that can be used will differ depending on the attached lens.

<table>
<thead>
<tr>
<th>Attached lens</th>
<th>Available image stabilizer</th>
<th>Example of Icon</th>
</tr>
</thead>
</table>
| Panasonic lenses compatible with Dual I.S. Mode (Based on the Micro Four Thirds System standard)  
  • If the [DUAL] or [DUAL2] icon is not displayed on the recording screen even when a compatible lens is used, update the lens firmware to the latest version. (⇒ Firmware of Your Camera/Lens: 19) | Body + Lens (Dual I.S./Dual I.S.2) | ![Icon](image) |
| Lenses compatible with the image stabilizer function (Based on the Micro Four Thirds System standard) | Body or Lens | ![Icon](image) |
| Lenses without image stabilizer                                             | Body                     | ![Icon](image) |
| Lenses without communication function                                       | Body                     | ![Icon](image) |

* The 5-Axis Hybrid Image Stabilizer (⇒ Image Stabilizer Settings: 246) can be used with any lenses.
6. Drive/Shutter/Image Stabilizer — Image Stabilizer

💡 Using the Image Stabilizer

- When using a lens with an O.I.S. switch, set the switch on the lens to [ON].
- When using a lens that does not have a communication function with this camera, after turning on the camera, a message asking for confirmation of the lens information is displayed. Correctly operating the image stabilization function requires that the focal length and lens name be set to match the attached lens. Follow the message to make the settings. This can also be set using the menu. (⇒[Lens Information]: 249)

- When the shutter button is pressed halfway, the camera shake alert icon [ ⬃ ⬃ ] may be displayed on the recording screen. If this is displayed, we recommend using a tripod, the self timer or the Shutter Remote Control (DMW-RS2: optional).
- We recommend turning off the image stabilizer function when using a tripod.
- The image stabilizer may cause vibration or produce operational sound during operation, but these are not malfunctions.
- When using a lens that does not have a communication function with this camera, you can hide the message asking for confirmation of the lens information that is displayed after turning on the camera: [ ⬃ ⬃ ] ⇒ [ ⬃ ⬃ ] ⇒ [Lens Info. Confirmation] (⇒[Lens Info. Confirmation]: 582)
- You can display the reference point and check the camera shake status: [ ⬃ ⬃ ] ⇒ [ ⬃ ⬃ ] ⇒ [I.S. Status Scope] (⇒[I.S. Status Scope]: 572)
### Image Stabilizer Settings

Set the image stabilizer operation to match the recording situation.

![Icon]

**Operation Mode**
- Sets the stabilization movement (blur) to match the recording method (normal, panning). ([Operation Mode]: 247)

**E-Stabilization (Video)**
- Camera shake during video recording is corrected along the vertical, horizontal, roll, pitch, and yaw axes through the combined use of the in-lens, in-body, and electronic image stabilizers. (5-Axis Hybrid Image Stabilizer)
  - The [ ] on the recording screen changes to [ ] while [E-Stabilization (Video)] is functioning.
  - The angle of view may become narrower if set to [ON].

**Boost I.S. (Video)**
- Increases the effectiveness of the image stabilizer during video recording. This effect can help provide a stable composition when you want to perform recording from a fixed perspective. ([Boost I.S. (Video]): 248)

**Anamorphic (Video)**
- You can switch to an image stabilizer that suits anamorphic recording. ([Anamorphic (Video]): 248)

**Lens Information**
- When using a lens that does not have a communication function with the camera, register the lens information in the camera. ([Lens Information]: 249)
Drive/Shutter/Image Stabilizer – Image Stabilizer

- When the following functions are being used, [E-Stabilization (Video)] is not available:
  - [Variable Frame Rate]
  - [Live Cropping]

[Operation Mode]
Set the stabilization movement (blur) to match the recording method (normal, panning).

<table>
<thead>
<tr>
<th>Mode</th>
<th>Function Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal</td>
<td>Corrects vertical, horizontal, and rotational camera shake. This function is suitable for normal recording.</td>
</tr>
<tr>
<td>Panning (Left/Right)</td>
<td>Corrects vertical camera shake. This is suitable for horizontal panning.</td>
</tr>
<tr>
<td>Panning (Up/Down)</td>
<td>Corrects horizontal camera shake. This is suitable for vertical panning.</td>
</tr>
<tr>
<td>OFF</td>
<td>Turns the image stabilization function OFF.</td>
</tr>
</tbody>
</table>

- The [Operation Mode] that can be used differ depending on the lens used.
- When using lenses with an O.I.S. switch, the camera’s operation mode cannot be set to [OFF]. Set the switch on the lens to [OFF].
- When the following functions are being used, [Operation Mode] switches to [Normal]:
  - [M] mode
  - Video recording/[8K/4K PHOTO]/[Post-Focus]
6. Drive/Shutter/Image Stabilizer – Image Stabilizer

[Boost I.S. (Video)]
Increase the effectiveness of the image stabilizer during video recording. This effect can help provide a stable composition when you want to perform recording from a fixed perspective.

Settings: [ON]/[OFF]
• When [Boost I.S. (Video)] is operating, [ ]] is displayed on the recording screen.
• To change composition while recording, first set this to [OFF] before moving the camera.
  To set this to [OFF] during recording, use the Fn button. (Fn Buttons: 471)
• Longer focal lengths will result in weaker stabilization.

[Anamorphic (Video)]
You can switch to an image stabilizer that suits anamorphic recording.

Settings:
[4.0][2.0×][1.8×][1.5×][1.33×][1.30×]/[OFF]
• Make settings to suit the magnification of the anamorphic lens you are using.
• While [Anamorphic (Video)] is functioning, the set magnification appears on the image stabilizer icons on the recording screen, as shown by [ ] and [ ].

• When [Boost I.S. (Video)] is set, [Boost I.S. (Video)] is prioritized.
• Image stabilizer functions on your lens may not work correctly. Turn off the image stabilizer function on your lens if this is the case.
6. Drive/Shutter/Image Stabilizer – Image Stabilizer

❖ [Lens Information]
Register the information for lenses that cannot communicate with the camera.
Match the in-body image stabilizer with the information of the lens you register.

1 Press ▲▼ to select the lens information to use and then press ● or ◆.
   • In the default setting, the lens information for 6 lenses with a focal length of between 24 mm and 135 mm is registered.
   • The lens information for up to 12 lenses can be registered.

![Lens Information Table]

Registering, modifying, and deleting lens information

1 Press 
 to select the lens information and then press [DISP.].
- If lens information that has not been registered is selected, press or to proceed to Step 3.

2 Press 
 to select [Edit] or [Delete] and then press or .
- The lens information is deleted when you select [Delete].
- You cannot delete the lens information for a lens that is being used.

3 Enter the lens Information.
- The lens information changes if the lens information has already been registered.

[Focal Length]
Enter the focal length.
- The live view images can be enlarged for display when you rotate or .

[Lens Name]
Register the lens.
- For information on how to enter characters (Entering Characters: 609)
- Up to a maximum of 30 characters can be entered.

4 (If lens information that has not been registered is selected) Press [DISP.] to register the lens information.
7. Metering/Exposure/ISO Sensitivity

- [Metering Mode]: 252
- Program AE Mode: 253
- Aperture-Priority AE Mode: 257
- Shutter-Priority AE Mode: 260
- Manual Exposure Mode: 263
- Preview Mode: 267
- Exposure Compensation: 269
- Locking Focus and Exposure (AF/AE Lock): 271
- ISO Sensitivity: 273
### [Metering Mode]

Type of optical measurement to measure brightness can be changed.

- **Multi-metering**
  - Method in which the most suitable exposure is measured by judging the allocation of brightness on the whole screen.

- **Center-weighted**
  - Method used to perform measuring which focuses on the center of the screen.

- **Spot**
  - Method used to measure the extremely small part around the spot-metering target (A).
    - When you move the AF area, the spot metering target also moves to match.

- **Highlight-weighted**
  - Method used to perform measuring which focuses on the highlighted parts of the screen to prevent overexposure.
    - This is suitable for theater photography, etc.

*The standard value for correct exposure can be adjusted:*

- **Exposure Offset Adjust.**
  - [Exposure Offset Adjust.]: 550
Program AE Mode

In [P] mode (Program AE mode), the camera automatically sets the shutter speed and aperture value for the brightness of the subject. You can also use Program Shift to change combinations of shutter speed and aperture values while keeping the same exposure.

1. Set the mode dial to [P].
7. Metering/Exposure/ISO Sensitivity – Program AE Mode

2 **Press the shutter button halfway.**

- This displays the aperture value and shutter speed value on the recording screen.

3 **Start recording.**

(A) Shutter speed
(B) Aperture value
Program Shift

You can change the shutter speed and aperture value combination set automatically by the camera while maintaining the same exposure. With this, you can, for example, make the background more defocused by decreasing the aperture value or capture a moving subject more dynamically by slowing the shutter speed.

1. Press the shutter button halfway.
   - This displays the aperture value and shutter speed value on the recording screen. (Approx. 10 seconds)
2. Rotate or while the values are displayed.
   - This displays the Program Shift icon (C) on the recording screen.
3. Start recording.

Canceling Program Shift

- Set the camera on/off switch to [OFF].
- Rotate or until the Program Shift icon disappears.
• Program Shift is not available when using the following functions:
  – Flash
  – [6K/4K PHOTO]/[Post-Focus]
• You can customize dial operations:
  [ 
  [ Dial Set. ] ] ➔ [ Assign Dial (F/SS)] ➔ [Rotation (F/SS)] ➔ [Dial Set.]: 562)
• The recording screen can display an exposure meter indicating the relationship
  between aperture value and shutter speed:
  [ ] ➔ [ ] ➔ [Expo.Meter] ➔ [Expo.Meter]: 571)
Aperture-Priority AE Mode

In [A] mode (Aperture-Priority AE mode), you can set the aperture value before recording. The shutter speed will be automatically set by the camera.

Smaller aperture values
It becomes easier to defocus the background.

Larger aperture values
It becomes easier to bring everything into focus including the background.
1 Set the mode dial to [A].

2 **Set the aperture value.**
   - Rotate or .

3 **Start recording.**

   - If the correct exposure is not achieved when the shutter button is pressed halfway, the aperture value and the shutter speed blink red.
Depth of Field Characteristics

<table>
<thead>
<tr>
<th>Aperture value</th>
<th>Small</th>

<td>Depth of field (area in sharp focus)</td>
<td>Shallow (narrow)</td>
<td>Deep (wide)</td>
</tr>
<tr>
<td>Example: When you want to take an image with a defocused background.</td>
<td>Example: When you want to take an image with focus as far as the background.</td>
<td></td>
</tr>
</tbody>
</table>

- The effects of the set aperture value and shutter speed will not be visible on the recording screen.
  To check the effects on the recording screen, use [Preview]. (Preview Mode: 267)
  You can set the preview of the aperture effect to constantly operate in [A] mode to check the depth of field while recording:
  [ ] ➔ [ ] ➔ [Constant Preview] (Constant Preview: 565)
- The brightness of the recording screen and of actual recorded images may differ.
  Check the images on the playback screen.
- When using a lens with an aperture ring, set the position of the aperture ring to other than [A] to use the aperture value of the lens.
- You can customize dial operations:
  [ ] ➔ [ ] ➔ [Dial Set.] ➔ [Assign Dial (F/SS)][Rotation (F/SS)] (Dial Set.: 562)
- The recording screen can display an exposure meter indicating the relationship between aperture value and shutter speed:
  [ ] ➔ [ ] ➔ [Expo.Meter] (Expo.Meter: 571)
Shutter-Priority AE Mode

In [S] mode (Shutter-Priority AE mode), you can set the shutter speed before recording. The aperture value will be automatically set by the camera.

Slower shutter speeds
It becomes easier to capture motion.

Faster shutter speeds
It becomes easier to freeze motion.
7. Metering/Exposure/ISO Sensitivity — Shutter-Priority AE Mode

1. **Set the mode dial to [S].**

2. **Set the shutter speed.**
   - Rotate ⦿ or ⦿.

3. **Start recording.**

   • If the correct exposure is not achieved when the shutter button is pressed halfway, the aperture value and the shutter speed blink red.
• The effects of the set aperture value and shutter speed will not be visible on the recording screen. To check the effects on the recording screen, use [Preview]. (Preview Mode: 267)

• The brightness of the recording screen and of actual recorded images may differ. Check the images on the playback screen.

• Shutter speeds faster than 1/250 of a second are not available when recording using a flash. (Shutter Speeds for Flash Modes: 311)

• You can customize dial operations:

  [ ] ➔ [ ] ➔ [Dial Set.] ➔ [Assign Dial (F/SS)|[Rotation (F/SS)] ➔ [Dial Set.]: 562]

• The recording screen can display an exposure meter indicating the relationship between aperture value and shutter speed:

  [ ] ➔ [ ] ➔ [Expo.Meter] ➔ [Expo.Meter]: 571]

Manual Exposure Mode

In [M] mode (Manual Exposure mode), you can take pictures by manually setting the aperture value and shutter speed. In default settings, the ISO sensitivity is set to [AUTO]. As a result, the ISO sensitivity will be adjusted according to the aperture value and shutter speed. Exposure compensation can also be used when ISO sensitivity is set to [AUTO].

1 Set the mode dial to [M].
2 Set the aperture value and shutter speed.
   - Rotate [ ] to set the aperture value, and [ ] to set the shutter speed.

3 Start recording.

(A) Shutter speed
(B) Aperture value

• If the correct exposure is not achieved when the shutter button is pressed halfway, the aperture value and the shutter speed blink red.

❖ Available Shutter Speeds (Sec.)

• [MECH.]
  [B] (Bulb, max. approx. 30 minutes), 60 to 1/8000

• [EFC]
  [B] (Bulb, max. approx. 30 minutes), 60 to 1/2000

• [ELEC.]
  [B] (Bulb, max. approx. 60 seconds), 60 to 1/16000
- The effects of the set aperture value and shutter speed will not be visible on the recording screen. To check the effects on the recording screen, use [Preview]. (Preview Mode: 267)

You can set the preview of the aperture effect and the shutter speed effect to constantly operate in [M] mode to check the depth of field and movement of the subject while recording:

- [ ] ➔ [ ] ➔ [Constant Preview] (Constant Preview: 565)

- The brightness of the recording screen and of actual recorded images may differ. Check the images on the playback screen.

- When using a lens with an aperture ring, set the position of the aperture ring to other than [A] to use the aperture value of the lens.

- Shutter speeds faster than 1/250 of a second are not available when recording using a flash. (Shutter Speeds for Flash Modes: 311)

- You can customize dial operations:

  - [ ] ➔ [ ] ➔ [Dial Set.] ➔ [Assign Dial (F/SS)] ➔ [Rotation (F/SS)] ➔ [Dial Set.]: 562

- The recording screen can display an exposure meter indicating the relationship between aperture value and shutter speed:

  - [ ] ➔ [ ] ➔ [Expo Meter] (Expo Meter: 571)

❖ Manual Exposure Assist
When ISO sensitivity is set to other than [AUTO], Manual Exposure Assist (example: 

You can check the difference between the current exposure value and the standard exposure (±0) measured by the camera.

• Use Manual Exposure Assist as a guide.

We recommend checking the images on the playback screen when recording.

❖ [B] (Bulb)
If you set the shutter speed to [B] (Bulb), the shutter stays open while the shutter button is pressed fully. (up to approx. 30 minutes)
The shutter closes when the shutter button is released.
Use this when you want to keep the shutter open for a long time to record images of fireworks, night scenery or a starry sky.

• We recommend using a tripod or the Shutter Remote Control (DMW-RS2: optional) during bulb recording.
• Bulb recording may create noticeable noise.

If you are concerned about noise, we recommend that you set [Long Exposure NR] (⇒ [Long Exposure NR]: 519) to [ON] in the [Photo] ([Image Quality]) menu before recording.
• Bulb is not available when using the following functions:
  – [6K/4K PHOTO]/[Post-Focus]
  – [Time Lapse Shot]
  – [Stop Motion Animation] (when set to [Auto Shooting])
  – [Bracketing]
Preview Mode

You can check the effects of aperture on the recording screen by physically closing the aperture blades of the lens to the aperture value set for actual recording.

In addition to the effects of aperture, you can check the effects of shutter speed at the same time.

• Use the Fn button registered with [Preview] to operate. In default settings, this is registered in the [Fn2] button.

For information about the Fn button (Fn Buttons: 471)

1 Press the preview button.

• Each press of the button switches between the effect preview screens.

Aperture effect: OFF
Shutter speed effect: OFF

Aperture effect: ON
Shutter speed effect: OFF

Aperture effect: ON
Shutter speed effect: ON
7. Metering/Exposure/ISO Sensitivity – Preview Mode

- It is possible to record in preview mode.
- Range for shutter speed effect check is 8 seconds to 1/16000 of a second.
- Preview mode is not available when recording with [6K/4K Pre-Burst].
- Depending on the [Constant Preview] setting, there are preview screens that cannot be displayed.
Exposure Compensation

**Exposure Compensation**

You can compensate the exposure when the standard exposure determined by the camera is too bright or too dark. You can adjust the exposure in 1/3 EV steps in a range of ±5 EV. When recording videos or recording with 6K/4K photo or Post-Focus, the range changes to ±3 EV.

1. **Press [ ]**.

2. **Compensate the exposure.**
   - Rotate , , or .
3 Confirm your selection.

- Press the shutter button halfway.

- In [M] mode, you can compensate the exposure by setting the ISO sensitivity to [AUTO].
- When the exposure compensation value falls below or exceeds ±3 EV, the brightness of the recording screen will no longer change. Press the shutter button halfway or use AE Lock to reflect the value on the recording screen.
- The set exposure compensation value is stored even if you turn off the camera.
- The standard value for standard exposure can be adjusted: [ ] ➔ [ ] ➔ [Exposure Offset Adjust.] (Exposure Offset Adjust.: 550)
- You can set the exposure compensation value to be reset when the camera is turned off: [ ] ➔ [ ] ➔ [Exposure Comp. Reset] (Exposure Comp. Reset: 551)
- You can change the operation of the [ ] button: [ ] ➔ [ ] ➔ [WB/ISO/Expo. Button] (WB/ISO/Expo. Button: 561)
- Exposure Bracket can be set and flash output can be adjusted on the exposure compensation screen: [ ] ➔ [ ] ➔ [Exposure Comp. Disp. Setting] (Exposure Comp. Disp. Setting: 561)
7. Metering/Exposure/ISO Sensitivity – Locking Focus and Exposure (AF/AE Lock)

Locking Focus and Exposure (AF/AE Lock)

Lock the focus and exposure in advance to take pictures with the same focus and exposure settings while changing the composition. This is useful when you want to bring an edge of the screen into focus or there is a backlight, for example.

1. Register [AE LOCK], [AF LOCK], or [AF/AE LOCK] to the Fn button. (Fn Buttons: 471)
   - These cannot be registered to [Fn3] to [Fn7].

<table>
<thead>
<tr>
<th>[AE LOCK]</th>
<th>[AF LOCK]</th>
<th>[AF/AE LOCK]</th>
</tr>
</thead>
<tbody>
<tr>
<td>The exposure is locked.</td>
<td>The focus is locked.</td>
<td>Both focus and exposure are locked.</td>
</tr>
</tbody>
</table>
2 **Lock focus and exposure.**

- Press and hold the Fn button.
  - If focus is locked, then the AF lock icon will be displayed.
  - If exposure is locked, then the AE lock icon will be displayed.

(A) AF lock icon (AFL)
(B) AE lock icon (AEL)

3 **Hold the Fn button to decide on the composition and then perform recording.**

- Press the shutter button fully.

- In the [M] mode, the AE Lock can be used when ISO sensitivity is set to [AUTO].
- Program Shift can be set even when AE is locked.
- You can maintain lock even without pressing and holding the Fn button:
  
  [ ] ➔ [ ] ➔ [AF/AE Lock Hold] ➔ [AF/AE Lock Hold]: 553
ISO Sensitivity

You can set light sensitivity (ISO sensitivity).
With the default settings, you can set 200 to 25600 in 1/3 EV increments.

1. Press [ISO].

2. Select ISO sensitivity.
   - Rotate , , , , , or .
   - Selection is also possible by pressing [ISO].

3 Confirm your selection.
   • Press the shutter button halfway.

<table>
<thead>
<tr>
<th>Characteristics of the ISO Sensitivity</th>
</tr>
</thead>
<tbody>
<tr>
<td>By increasing the ISO sensitivity, the shutter speed can be increased in dark places to prevent camera shake and subject blur. However, higher ISO sensitivities also increase the amount of noise in the recorded images.</td>
</tr>
</tbody>

</thead>
</table>
| [AUTO]  | The ISO sensitivity is automatically adjusted according to the brightness.  
• Taking picture: Maximum [3200]*1  
• Video recording: Maximum [6400]*2 |
| [200] to [25600] | The ISO sensitivity is fixed at the selected value.  
• You can extend the ISO sensitivity lower limit to [100] by setting [Extended ISO] (⇒ [Extended ISO]: 550) to [ON] in the [Custom] ([Image Quality]) menu. |

*1 Default setting. The upper limit can be changed with [ISO Sensitivity (photo)].

*2 Default setting. The upper limit can be changed with [ISO Sensitivity (video)].

* When the following functions are being used, the ISO sensitivity that can be set is restricted.
  – [High Dynamic] ([Filter Settings]): Fixed to [AUTO]
  – Other than [High Dynamic] ([Filter Settings]): Up to an upper limit of [3200]
  – [Multiple Exposure]: Down to a lower limit of [200], up to an upper limit of [3200]
  – [Like709] ([Photo Style]): Down to a lower limit of [200]
  – [V-Log L] ([Photo Style]): Down to a lower limit of [400]
  – [Hybrid Log Gamma] ([Photo Style]): Down to a lower limit of [400]
  – [M] mode, [6K/4K PHOTO], [Post-Focus]: Up to an upper limit of [12800]

* During video recording, the camera operates as [AUTO]. (When not in [M] mode)
- You can set upper and lower limits for ISO Auto:
  - [ISO Sensitivity (photo)] (ISO Sensitivity (photo): 520)
  - [ISO Sensitivity (video)] (ISO Sensitivity (video): 362)
- You can change the intervals between ISO sensitivity settings values:
  - [ISO Increments] (ISO Increments: 549)
- The setting range of ISO sensitivity can be extended:
  - [Extended ISO] (Extended ISO: 550)
- You can change the ISO sensitivity setting method when recording video in [P]/[A]/[S]/[M] modes from automatic to manual:
  - [Auto Exposure in P/A/S/M] (Auto Exposure in P/A/S/M: 551)
- You can set the lower limit for shutter speed for ISO Auto:
  - [Min. Shutter Speed] (Min. Shutter Speed: 520)
- You can change the operation of the [ISO] button:
- You can set the upper limit for ISO Auto on the ISO sensitivity settings screen:
  - [ISO Displayed Setting] (ISO Displayed Setting: 561)
- You can change the units for sensitivity to dB when recording video:
  - [SS/Gain Operation] (SS/Gain Operation: 370)
8. White Balance/Image Quality

- White Balance (WB): 278
- [Photo Style]: 285
- [Filter Settings]: 293
White Balance (WB)

- Adjusting the White Balance: 283

White balance (WB) is a function that corrects the color cast produced by the light illuminating the subject. It corrects the colors so that white objects appear in white to make the overall color closer to what is seen by the eye. Normally, you can use auto ([AWB], [AWBc] or [AWBw]) to obtain the optimal white balance. Set this function when the coloring of the image is different from what you expected, or you want to change the coloring to capture the ambience.

1. Press [WB].
2 Select the white balance.
   • Rotate 🌞, 🌕 or 🌑.
   • Selection is also possible by pressing [WB].

3 Confirm your selection.
   • Press the shutter button halfway.

- Setting Items (White Balance)

<table>
<thead>
<tr>

</table>

*1 It operates as [AWB] during video recording or when recording with [6K/4K PHOTO] or [Post-Focus].

K=Kelvin Color Temperature

1. [AWB] will work within this range.
2. Blue sky
3. Cloudy sky (Rain)
4. Shade
5. Sunlight
6. White fluorescent light
7. Incandescent light bulb
8. Sunrise and sunset
9. Candlelight

- Under lighting such as fluorescent or LED lighting, the appropriate white balance will vary depending on the lighting type.
- Use [AWB], [AWBc], [AWBw] or [ ] to [ ].
- The white balance is fixed to [AWB] while [Filter Settings] is being used.
- You can change the operation of the [WB] button:

[ ] ➞ [ ] ➞ [WB/ISO/Expo. Button] ➞ [WB/ISO/Expo. Button]: 561

registrating the white set

Take pictures of a white object under the light source of the recording location to adjust the white balance until it appears white.

1. Press [WB] and then select any value from [ ] to [ ].
2. Press ▲.
3. Aim the camera at a white object so that it appears inside the frame at the center of the screen and then press or .
   • This will set the white balance and return you to the recording screen.

color temperature setting

Set the numeric value for the white balance color temperature.

1. Press [WB] and then select any value from [ ] to [ ].
2. Press ▲.
   • The color temperature setting screen is displayed.
3. Press ▲▼ to select the color temperature and then press or .
   • You can set the White Balance Bracket (Color Temperature) by rotating  or  . (More Settings] (White Balance Bracket (Color Temperature)): 238)
   • You can set a color temperature from [2500K] to [10000K].
Adjusting the White Balance

You can adjust the coloring even when the coloring you want to apply is not produced by the selected white balance.

1 Press [WB].

2 Select the white balance and then press ▼.
   - The adjustment screen is displayed.
3 Adjust the coloring.
   ◀: [A] (AMBER: ORANGE)
   ▲: [G] (GREEN: GREENISH)
   ▶: [B] (BLUE: BLUISH)
   ▼: [M] (MAGENTA: REDDISH)
   • You can also touch the graph to make adjustments.
   • Press [DISP.] to return to the unadjusted state.
   • You can set the White Balance Bracket by rotating , , or .
     (➔ [More Settings] (White Balance Bracket): 238)

4 Confirm your selection.
   • Press the shutter button halfway.

• When the white balance is adjusted, the color of its recording screen icon changes to the adjusted color.
  Adjusting toward the [G] side will display [+], while adjusting toward the [M] side will display [−].
[Photo Style]

You can select the finishing settings of images to suit your subjects and expression styles. The image quality can be adjusted for each Photo Style.

Select [Photo Style] by pressing [ 

- [Standard] The standard setting.
- [Vivid] A setting that produces a more vivid quality with higher saturation and contrast.
- [Natural] A setting that produces a softer quality with lower contrast.
- [L.ClassicNeo] A setting for a film-like effect that has a nostalgic, soft coloring.
- [Flat] A setting that produces a flatter image quality with lower saturation and contrast.
- [Landscape] A setting suited for sceneries with vivid blue skies and greens.
- [Portrait] A setting suited for portraits with a healthy and beautiful skin tone.
- [Monochrome] A monochrome setting with no color shades.

*2 Can be set when [Grain Effect] is one of [Low], [Standard], or [High].

- The effects of [Grain Effect] and [Color Noise] cannot be checked on the recording screen.
- [Grain Effect] and [Color Noise] are not available when using the following functions:
  - Video recording/[6K/4K PHOTO]/[Post-Focus]
Registering Settings in My Photo Style

1. Press [button] to select the type of Photo Style.
2. Adjust the image quality.
   - My Photo Style displays the types of Photo Style at the top of image quality adjustment.
   - Select the base Photo Style.
3. Press [DISP.].
4. (When [MY PHOTO STYLE 1] to [MY PHOTO STYLE 10] is selected)
   Press [button] to select [Save Current Setting] and then press [button] or [button].
5. Press [button] to select the registration destination number and then press [button] or [button].
   - A confirmation screen will be displayed.
   - On the confirmation screen, press [DISP.] to change the My Photo Style name.
   - Up to 22 characters may be entered. Double-byte characters are treated as 2 characters.
   - How to enter characters (Entering Characters: 609)

Changing the Registered Contents of My Photo Style

1. Select any value from [MY PHOTO STYLE 1] to [MY PHOTO STYLE 10].
2. Press [DISP.] and then set the item.
   - [Load Preset Setting]
   - [Save Current Setting]
   - [Edit Title]
   - [Restore to Default]
8. White Balance/Image Quality – [Filter Settings]

[Filter Settings]

- [Simultaneous Record w/o Filter]: 302

This mode records with additional image effects (filters). You can adjust the effect for each filter. In addition, you can simultaneously take pictures without effects.

1. Set the [Filter Effect].

   1. [ ] [ ] [ ] [ ] [Filter Settings] [Filter Effect] [SET]
2 Select the filter.
- Press ▲▼ to select, and then press 📷 or 🌸.
- You can also select the image effect (filter) by touching the sample picture.
- Press [DISP.] to switch the screen in the order of normal display, guide display, and list display.
  The guide display shows the description of each filter.
8. White Balance/Image Quality – [Filter Settings]

沪深

Adjusting the Filter Effect

You can adjust the filter effect.

1. Select the filter.
2. On the recording screen, press [WB].
3. Rotate , , or to set.
   • To return to the recording screen, press [WB] again.
   • When the filter effect is adjusted, the filter icon on the recording screen is indicated with [♭].

8. White Balance/Image Quality – [Filter Settings]

Setting a Filter with Touch Operation

- The default settings are for the Touch Tab to not be displayed.
  (→[Touch Settings]: 559)

1. Touch [ ].
2. Touch the item to set.
   - [ ]: Filter on/off
   - [ ]: Filter
   - [ ]: Filter effect adjustment
• White balance will be fixed to [AWB] and the flash will be fixed to [ ] (Forced Flash Off).
• The upper limit to ISO sensitivity is [3200].
• When [High Dynamic] is set, the ISO sensitivity is fixed to [AUTO].
• Depending on the filter, the recording screen may seem as if frames are missed.
• [Rough Monochrome]/[Silky Monochrome]/[Soft Focus]/[Star Filter]/[Sunshine] are not available when using the following function:
  – [ ] mode
• When [Image Area of Video] is [PIXEL/PIXEL], recording video with [Toy Effect]/[Toy Pop] is not possible.
• [Filter Effect] is not available when using the following functions:
  – [Multiple Exposure]
  – [Live Cropping]
• When displaying the [Filter Effect] setting screen using the Fn button, pressing [DISP.] displays the filter selection screen.
8. White Balance/Image Quality – [Filter Settings]

Setting the Type of Defocus ([Miniature Effect])

2. Press ▲ to display the setting screen.
   • The setting screen can also be displayed by touching [ ] then [ ].
3. Press ▲▼ or ◄► to move the in-focus portion.
   • You can also move the in-focus portion by touching the screen.
   • You can also switch the defocus orientation by touching [ ].
4. Rotate ◄ or ◄ to change the size of in-focus portion.
   • The portion can also be enlarged/reduced by pinching out/pinching in the screen.
   • To reset the in-focus portion setting to the default, press [DISP.].
5. Press ◄ or ◄ to set.

• No audio is recorded in videos.
• When the system frequency is set to [59.94Hz (NTSC)], the length of the video recorded will be approx. 1/10 of the actual recording time. The displayed video recording time will be approx. 10 times longer than the recording time displayed during normal video recording.
When the system frequency is set to [50.00Hz (PAL)] or [24.00Hz (CINEMA)], the length of the video recorded will be approx. 1/8 of the actual recording time. The displayed video recording time will be approx. 8 times longer than the recording time displayed during normal video recording.
• If you end video recording after a short time, the camera may go on recording for a certain period.
8. White Balance/Image Quality – [Filter Settings]

Setting the Color to Be Left ([One Point Color])

1. Set [Filter Effect] to [One Point Color].
2. Press ▲ to display the setting screen.
   • The setting screen can also be displayed by touching [(a)] then [(p)].
3. Press ▲▼◄► to move the frame and select the color you want to leave.
   • You can also select the color you want to leave by touching the screen.
   • To return the frame back to the center, press [DISP].

4. Press ◀ or ▶ to set.
8. White Balance/Image Quality – [Filter Settings]

Setting the Light Source Position and Size ([Sunshine])

1. Set [Filter Effect] to [Sunshine].
2. Press ▲ to display the setting screen.
   - The setting screen can also be displayed by touching [?] then [ ].
3. Press ▲▼←→ to move the center position of the light source.
   - The position of the light source can also be moved by touching the screen.
4. Rotate ◀, ◀ or ◀ to adjust the size of the light source.
   - This can also be enlarged/reduced by pinching out/pinching in the screen.
   - To reset the light source setting to the default, press [DISP].
5. Press ◀ or ◀ to set.
8. White Balance/Image Quality – [Filter Settings]

**[Simultaneous Record w/o Filter]**

Settings: [ON]/[OFF]

- [Simultaneous Record w/o Filter] is not available when using the following functions:
  - Burst recording
  - [6K/4K PHOTO]/[Post-Focus]
  - [Time Lapse Shot]
  - [Stop Motion Animation]
  - [RAW+/FINE]/[RAW+/STD.]/[RAW] ([Picture Quality])
  - [Bracketing]
9. Flash

- Using an External Flash (Optional): 304
- Setting Flash: 308
- Recording Using a Wireless Flash: 317
Using an External Flash (Optional)

- Removing the Hot Shoe Cover: 305

If you attach the Flash (DMW-FL580L/DMW-FL360L/DMW-FL200L: optional) to the hot shoe, you can record using the flash.
You can also use a commercially available external flash by connecting a synchro cable to the flash synchro socket.
Furthermore, by attaching an external flash that supports wireless flash recording, you can wirelessly control an external flash that is in a position separate from the camera.

- Remove the lens hood to prevent vignetting.
- Flash recording is not possible when the following functions are being used:
  - [6K/4K PHOTO]/[Post-Focus]
  - [ELEC.]/[Silent Mode]
  - [Filter Settings]
3. Flash -- Using an External Flash (Optional)

Removing the Hot Shoe Cover

Before attaching the Flash (optional), remove the hot shoe cover. Refer to the operating instructions for the Flash for details about how to attach it.

1. Remove the hot shoe cover by pulling it in the direction indicated by arrow (2) while pressing it in the direction indicated by arrow (1).
9. Flash – Using an External Flash (Optional)

- Connecting a Synchro Cable to the Flash Synchro Socket

You can use a commercially available external flash by connecting a synchro cable to the flash synchro socket.

- Use an external flash with a synchronization voltage of 400 V or less.
- Do not use the synchro cables with the length of 3 m (9.8 feet) or more.

1. Rotate the flash synchro socket cap in the direction of the arrow to remove.
   - Be careful not to lose the flash synchro socket cap.

2. Connect the synchro cable to the flash synchro socket.
   - The socket has a lock screw to prevent the cable from falling off.
   - For the connection, refer to the operating instructions for the synchro cable.

- The flash synchro socket has no polarity. You can use a synchro cable regardless of its polarity.
9. Flash -- Using an External Flash (Optional)

**Notes on Flash Recording**

- Do not bring any object near the flash. Heat or light may cause the object to deform or discolor.
- If you record repeatedly, time may be needed to charge the flash. While the flash is charging, images will be recorded without the flash firing.
- When an external flash is attached, do not carry the camera by holding only the external flash. It may become detached.
- When using a commercially available external flash, do not use one with reversed polarity or function for communicating with a camera. It may cause the camera to malfunction, or it may not operate correctly.
- Refer to the operating instructions for the external flash for details.
Setting Flash

- [Flash Mode]: 309
- [Firing Mode]/[Manual Flash Adjust.]: 311
- [Flash Adjust.]: 313
- [Flash Synchro]: 315
- [Auto Exposure Comp.]: 316

You can set the flash function to control flash firing from the camera.
9. Flash – Setting Flash

**[Flash Mode]**

Sets the flash mode.

1. 

- **[ ] (Forced Flash On)/[ ] (Forced On/Red-Eye)**
  - The flash fires every time regardless of the recording conditions.
  - This is suitable for recording when there is backlighting or under lighting such as fluorescent lighting.

- **[ ] (Slow Sync.)/[ ] (Slow Sync./Red-Eye)**
  - When recording images against a nightscape, this will slow the shutter speed when the flash fires to make not only the subject but also the nightscape appear brighter.
  - Slower shutter speeds may result in blurry images. To avoid this, we recommend using a tripod.

- **[ ] (Forced Flash Off)**
  - The flash does not fire.
9. Flash – Setting Flash

- The flash fires twice.
  - The interval between the first and second firings is longer when [ ] or [ ] is set. The subject should not move until the second firing has finished.
- [ ] and [ ] cannot be used when the following are set:
  - [Firing Mode]: [MANUAL]
  - [Flash Synchro]: [2ND]
  - [Wireless]: [ON]
- Some flash modes may not be available depending on the settings on the external flash.
- The effectiveness of red-eye reduction varies from person to person.
  - The effect, which is influenced by factors such as distance to the subject and whether the subject is looking at the camera when the preliminary flash is fired, may not be very noticeable in some cases.

- Available Flash Settings by Recording Mode

The available flash settings depend on the recording mode.

<table>
<thead>
<tr>
<th>Recording mode</th>

* [ ] and [ ] can be set in [A] mode. In [ ], the flash mode switches to one suited to the recording situation.*
Flash – Setting Flash

Shutter Speeds for Flash Modes

- [ ´ ]/[ µ ]: 1/60 of a second*1 to 1/250 of a second
- [ ± S ]/[ ± G ]: 1 second to 1/250 of a second

*1 In [S] mode, this will be 60 seconds and in [M] mode it will be [B] (Bulb).

[Firing Mode]/[Manual Flash Adjust.]

You can select whether to set the flash output automatically or manually.

- The settings made here are enabled when some flashes from other manufacturers are attached.
- Set on the flash when a Flash (DMW-FL580L/DMW-FL360L/DMW-FL200L: optional) is attached.

1. Set the [Firing Mode].

   - [ ] ➔ [ ] ➔ [ ´ ] ➔ [ ] ➔ [Firing Mode]

   [TTL]

   Sets flash output to be set automatically by the camera.
9. Flash – Setting Flash

**[MANUAL]**
Sets the flash output manually.

- With [TTL], you can record the images you want even when recording dark scenes where the flash output tends to become greater.
- The flash output ([1/1], etc.) is displayed on the flash icon of the recording screen.

2. **(When set to [MANUAL])** Select [Manual Flash Adjust.] and then press  or .

3. Press  to set the flash output and then press  or .

- It can be set within the range of [1/1] (full flash output) to [1/128] in 1/3 steps.
9. Flash – Setting Flash

**[Flash Adjust.]**

You can adjust the flash output when taking pictures with the flash in TTL output mode.

1. **Select [Flash Adjust.]**.
   - Press 
   - 
   - 
   - 

2. **Press 
   or 
   to adjust the flash output and then press 
   or 
   • It can be adjusted within the range of [−3 EV] to [+3 EV] in 1/3 EV steps.**
9. Flash – Setting Flash

- [Flash] is displayed on the recording screen.
- For information about adjusting the flash output when recording using a wireless flash (Flash Adjust.: 321)
- [Flash Adjust.] cannot be used when the following are set:
  - [Firing Mode]: [MANUAL]
  - [Wireless]: [ON]
9. Flash – Setting Flash

[Flash Synchro]
When a moving subject is recorded at night using a slow shutter and flash, a trail of light may appear in front of the subject. If you set [Flash Synchro] to [2ND], you can take a dynamic picture with a trail of light appearing behind the subject by firing the flash immediately before the shutter closes.

1. Select [Flash Synchro]

[1ST]
This is the normal method for recording with the Flash.

[2ND]
The light source appears behind the subject and the picture becomes dynamic.
9. Flash – Setting Flash

- When [2ND] is set, [2nd] is displayed on the flash icon of the recording screen.
- When [Wireless] is set to [ON], this is fixed to [1ST].
- The effect may not be adequately achieved at faster shutter speeds.

### [Auto Exposure Comp.]

Automatically adjust the flash output in conjunction with the exposure compensation value. (Exposure Compensation: 269)

1. \( \Rightarrow [ \text{ ] } \Rightarrow [ \text{ } ] \Rightarrow \text{Select [Auto Exposure Comp.]} \)
   Settings: [ON]/[OFF]
9. Flash – Recording Using a Wireless Flash

Recording Using a Wireless Flash

You can use a Flash (DMW-FL580L/DMW-FL360L/DMW-FL200L: optional) to record using a wireless flash. You can separately control the firing of three flash groups and the flash attached to the hot shoe of the camera.
9. Flash – Recording Using a Wireless Flash

✧ Placing a Wireless Flash

Place the wireless flash with its wireless sensor facing the camera.

Placement example
When (C) is placed to erase the shadow in the background of the subject that the flash groups (A) and (B) will create

Placement range
When DMW-FL360L is attached

(D) 5.0 m (16 feet)
(E) 7.0 m (23 feet)
9. Flash – Recording Using a Wireless Flash

1. Attach an external flash to the camera. ([Removing the Hot Shoe Cover: 305])

2. Set the wireless flashes to [RC] mode and then place them.
   • Set the channel and group for the wireless flashes.

• The placement range serves as a guide for when recording with the camera held horizontally. The range differs depending on the surrounding environment.
• We recommend using a maximum of three wireless flashes in each group.
• If the subject is too close, communication light may affect the exposure. You can reduce the effect by setting [Communication Light] to [LOW] or lowering the output with a diffuser or similar device. ([Communication Light: 323])
3 Enable the wireless flash function of the camera.
   - [ ] ➔ [ ] ➔ [Wireless] ➔ [ON]

4 Set [Wireless Channel].
   - Select the same channel as on the wireless flash side.

5 Set [Wireless Setup].
   - Set the firing mode and flash output.
Setting Items ([Wireless Setup])

- To fire a test flash, press [DISP].

<table>

- [Loop Recording (video)]: 412
- [Segmented File Recording]: 414
- List of Recording Qualities That Enable Special Videos to be Recorded: 416
Recording Videos

- Recording Videos: 325

It is possible to record video with a maximum resolution of 6K-A (4992 x 3744) on this camera. It also supports switching of the system frequency and 2 types of recording file format; MP4, and MOV.

In the [M] mode (Creative Video mode), which is specifically for video recording, you can use all of the video functions.

### Recording Videos

1. **Start recording.**
   - Press the video rec. button.
   - Release the video rec. button right after you press it.

2. **Stop recording.**
   - Press the video rec. button again.
Screen Displays While Video Recording

The live view angle of view changes to the angle of view for video recording, and video recording time (A) and elapsed recording time (B) are displayed.

- “h” is an abbreviation for hour, “m” for minute and “s” for second.
- The recording state indication (C) and card access indication (D) turn red while videos are being recorded.

If maintaining focus on the subject is difficult during video recording with AF, press the shutter button halfway to re-adjust the focus.
Exposure Control While Video Recording

Videos will be recorded using the aperture, shutter speed, and ISO sensitivity settings below.

<table>

<td>When using an SDXC memory card: A new file will be created to continue recording if the continuous recording time exceeds 3 hours and 4 minutes or the file size exceeds 96 GB.</td>
</tr>
</tbody>
</table>
• If an operation such as a zoom or button operation is performed during video recording, that operation sound may be recorded.
• The lens operation sound (AF and image stabilizer) may be recorded to video.
• If the operation sound of pressing the video rec. button or sub video rec. button to end recording bothers you, try the following:
  – Record the video about 3 seconds longer, and then divide the last part of the video using [Video Divide] in the [Playback] ([Edit Image]) menu.
  – Use the Shutter Remote Control (DMW-RS2: optional) for recording.
• Depending on the type of card, the card access indication may appear for a while after video recording. This is not a malfunction.
• Even when playback is performed on a supported device, situations may occur where image or sound quality is poor, recording information is not displayed correctly, or playback is not possible, for example. If you experience any of these, play them back on the camera.
• If the camera temperature rises, [ ] may be displayed and recording may stop. Wait until the camera cools down.
• Video recording is not possible while you are using the following functions:
  – [Time Lapse Shot]
  – [Stop Motion Animation]
  – [Rough Monochrome]/[Silky Monochrome]/[Soft Focus]/[Star Filter]/[Sunshine] ([Filter Settings])
  – [Post-Focus]
• You can switch the recording screen display to suit video recording just as with the [ ] mode:
  [ ] ➔ [ ] ➔ [Video-Priority Display] ➔ [Video-Priority Display]: 577
• You can display a red frame on the recording screen that indicates that video is being recorded:
  [ ] ➔ [ ] ➔ [Red REC Frame Indicator] ➔ [Red REC Frame Indicator]: 578
Creative Video Mode

- Setting the Exposure for Recording Videos: 331
- Separating Settings for Recording Video and Pictures: 334

The [M] mode (Creative Video mode) is a recording mode specifically for video recording in which you can use all video functions. In the recording modes specifically for video, you can start and stop video recording with the shutter button. Change the exposure and audio settings with touch operation to prevent operation sounds from being recorded. Settings such as exposure and white balance can be changed independent of picture taking settings.
10. Recording Videos – Creative Video Mode

Setting the Exposure for Recording Videos

1 Set the mode dial to [M].

2 Set the exposure mode.
   - [ ] ➔ [ ] ➔ [Exposure Mode] ➔ [P]/[A]/[S]/[M]
   - You can perform the same exposure operations as the [P]/[A]/[S]/[M] modes.

3 Close the menu.
   - Press the shutter button halfway.
10. Recording Videos – Creative Video Mode

4 Start recording.
   - Press the shutter button (A) or video rec. button (B).

5 Stop recording.
   - Press the shutter button or video rec. button again.
Operations During Video Recording

Change the exposure and audio settings with touch operation to prevent operation sounds from being recorded.

1. Touch \[ \]
2. Touch an icon.
   - \( \) : Zoom (When using an interchangeable lens supporting power zoom)
   - \( F \) : Aperture value
   - \( SS \) : Shutter speed
   - \( \) : Exposure compensation
   - \( \text{ISO} / \text{(Gain)}\) : ISO sensitivity/Gain (dB)
   - \( \) : Sound recording level adjustment
3. Drag the slide bar to set the item.
   - \( \downarrow \) \( \uparrow \) \( \) : Changes the setting slowly.
   - \( \downarrow \) \( \uparrow \) \( \) : Changes the setting quickly.

• If you touch icon (C), the screen of Step 2 is redisplayed.

With the default settings, the Touch Tab is not displayed.
(⇒ [Touch Settings]: 559)
Separating Settings for Recording Video and Pictures

In default settings, settings such as exposure and white balance changed in [M] mode are also reflected in picture recording in [P]/[A]/[S]/[M] modes.

From the [CreativeVideo Combined Set.] menu, you can separate settings for video recording and for picture recording.

- [ ]: The recording settings are linked across recording modes.
- [ ]: Recording settings can be separated by the [M] mode and the [P]/[A]/[S]/[M] mode.

- The [A] mode uses the optimum recording settings for the camera automatically, so the recording settings will be independent, irrespective of the settings made with this function.
This section describes the settings used when video recording.

- In "4. Image Recording", the functions described work with both pictures and video.
- Please also refer to that section.
  - [Double Card Slot Function]: 118
  - [Folder / File Settings]: 120
  - [File Number Reset]: 123
10. Recording Videos – Video Recording Settings

[System Frequency]

This changes the system frequency of videos that are recorded and played back with the camera. The default setting is for the system frequency to be set to the TV broadcast system for the region where the camera was bought.

After changing the setting, turn the camera off and on.
If you record using a system frequency that differs from the broadcasting system of your region, it may not be possible for you to properly play back videos on your TV.
We recommend using the setting as it was at the time of purchase if you are unsure about broadcasting systems or if you will not be involved in producing cinema film.
A video recorded with a system frequency different from the setting of [System Frequency] cannot be played back in the camera.
10. Recording Videos – Video Recording Settings

[Rec. File Format]

Sets the recording file format of videos to be recorded.

Select [Rec. File Format]

- [MP4]: This file format is suitable for playback on PCs.
- [MOV]: This file format is suitable for image editing.

- When [System Frequency] is set to [24.00Hz (CINEMA)], it is fixed to [MOV].
[Rec Quality]

Sets the image quality of videos to be recorded.

The image qualities you can select depend on the [System Frequency] and

[Rec Quality] settings can also be made using [Filtering] (→[Filtering]: 345)
to display only items that meet your conditions and [add to list] (→[add to
list]: 346) to register recording qualities you use often.

emies 355 [ 返回 ] Select [Rec Quality]

• To record video with a bit rate of 72 Mbps or more, it requires a card with the
corresponding Speed Class. (→Memory Cards That Can Be Used: 25)
[Rec. File Format]: [MP4]

- Image compression: Long GOP
- Audio format: AAC (2ch)

(A) Recording frame rate
(B) Bit rate (Mbps)

</tbody>
</table>
In this document, videos are indicated as follows according to their resolution:
- 6K-A (4992×3744) video, 4K-A (3328×2496) video: 6K/4K Anamorphic (4:3) video
- C4K (4096×2160) video: C4K video
- 4K (3840×2160) video: 4K video
- Full High Definition (1920×1080) video: FHD video

Since the camera employs the VBR recording format, the bit rate is changed automatically depending on the subject to record. As a result, video recording time is shortened when a fast-moving subject is recorded.

Videos in ALL-Intra and 4:2:2 10-bit formats are intended for editing on a PC used for video production.

When the following functions are being used, [Image Area of Video] is fixed to [FULL].
- 6K Anamorphic (4:3) video

When using the following function, you can only select 8-bit FHD video:
- [Miniature Effect] ([Filter Settings])

You can register a combination of [System Frequency], [Rec. File Format], [Image Area of Video], and [Rec Quality] to My List. (►[add to list]: 346)
[Filtering]

When the [Rec. File Format] is set to [MOV], you can specify items such as frame rate, resolution, and codec (YUV, Bit value, Image compression), and just display recording quality that meets those conditions.

1. In the [Rec Quality] setting screen, press [DISP].

2. Press ▲▼ to select a setting item and then press ▼ or ▲.
   - Settings: [Frame Rate]/[Resolution]/[Codec]/[Variable Frame Rate]/[Hybrid Log Gamma]

3. Press ▲▼ to select the filtering conditions and then press ▼ or ▲.

4. Press [DISP.] to confirm the setting.
   - You are returned to the [Rec Quality] setting screen.

Clearing the filtering conditions

Select [ANY] in Step 3.

- The filtering conditions are also cleared when you do the following:
  - Change the [System Frequency]
  - Select a recording quality from [Rec Quality (My List)]

- When you change recording quality using a filter, the current filtering conditions are stored.
10. Recording Videos – Video Recording Settings

[add to list]
Select a recording quality and register it in My List. The recording quality you register can be set in [Rec Quality (My List)].

1 In the [Rec Quality] setting screen, press [Q].
   • The following settings are also registered at the same time:
     – [System Frequency]
     – [Rec. File Format]
     – [Image Area of Video]

Setting or deleting in My List
1 Select [Rec Quality (My List)].
   •  
2 Press ▲▼ to select a setting item and then press or .
   • You cannot select setting items that have different system frequencies.
   • To delete from My List, select the item and press [Q].
Display [Rec Quality (My List)] on the Control Panel

You can display the My List of recording quality from the control panel in [ ] mode or when it is set to [Video-Priority Display].

1. Display the setting screen.
   - Touch the recording quality item.
   - When already registered in My List, the [Rec Quality (My List)] setting screen is displayed.
   - When not yet registered, the [Rec Quality] setting screen is displayed.
   - [Rec Quality (My List)] and [Rec Quality] switch each time you press the [DISP.] button.
   - The next time the setting screen is displayed, the screen last used is displayed.

- Up to 12 types of recording quality can be registered.
[Image Area of Video]

Set the image area during video recording. The angle of view differs depending on the image area. Narrowing the image area allows you to achieve a telescopic effect without image deterioration.

Select [Image Area of Video]

<table>
<thead>

</tbody>
</table>

| [PIXEL/PIXEL]   | Records with one pixel on the sensor, which is equal to one pixel of the video. |
| Angle of view:  | Narrow                                                                          |
| Telescopic effect: Possible |

Angle of view: Wide
Telescopic effect: Not possible
**Image area (Ex.: FHD video)**

- When the following functions are being used, [Image Area of Video] is fixed to [FULL].
  - [Live Cropping]
  - 6K Anamorphic (4:3) video
10. Recording Videos – Time Code

Time Code

- Setting the Time Code: 350

When video is recorded in the MOV format, the hour, minute, seconds, and number of frames information (time code) is recorded automatically. The time code is used to synchronize multiple image and audio sources.

- The time code is not recorded with video in the MP4 format.

Setting the Time Code

Sets the recording, display, and output of the time code.

   - [Rec. File Format] [MOV]
2 Select [Time Code].

- [Time Code Display]
  Displays the time code on the recording screen/playback screen.

- [Count Up]
  - [REC RUN]: Counts the time code only when recording videos.
  - [FREE RUN]: Counts the time code also when video recording is stopped and when the camera is turned off.

  • When the following function is being used, [Count Up] is fixed to [REC RUN]:
    - [Variable Frame Rate]

- [Time Code Value]
  - [Reset]: Sets to 00:00:00:00 (hour: minute: second: frame)
  - [Manual Input]: Manually input hour, minute, second and frame.
  - [Current Time]: Sets hour, minute and second to current time and sets frame to 00.
10. Recording Videos – Time Code

[Time Code Mode]

[DF]: Drop Frame. The camera modifies the difference between recorded time and time code.
• Seconds and frames are separated by ".". (Example: 00:00:00.00)

[NDF]: Non-Drop Frame. Records the time code without drop frame.
• Seconds and frames are separated by ":". (Example: 00:00:00:00)

• When the following functions are being used, [Time Code Mode] is fixed to [NDF]:
  – [50.00Hz (PAL)] /[24.00Hz (CINEMA)] ([System Frequency])
  – 23.98p (Rec Quality)

[HDMI Time Code Output]

Time code information is added to images output via HDMI when recording with the [ ] mode.
• The time code can also be output via HDMI by setting the mode dial to [ ] during playback.
  In the [Setup] ([IN/OUT]) menu, set [Output Resolution (Playback)] in [HDMI Connection] to [AUTO]. (⇒ [HDMI Connection]: 590)
• The device screen may go dark depending on the connected device.
Using AF (Video)

- [Continuous AF]: 354
- [AF Custom Setting(Video)]: 355

This section describes the use of AF when video recording.

- In "5. Focus/Zoom"; the functions described work with both pictures and video.
  - Selecting the Focus Mode: 125
  - Selecting the AF Mode: 135
  - AF Area Movement Operation: 158
  - Record Using MF: 167
  - Recording with Zoom: 174
You can select how to set the focus in AF when recording videos.

[Continuous AF]

Select [Continuous AF]

- **[MODE1]** The camera continues to automatically focus only during recording.
- **[MODE2]** When recording with [P] mode, the camera automatically keeps focusing on subjects during recording standby and during recording.
- **[OFF]** The camera maintains the focus point at the start of recording.

- In the [IA] mode, the camera automatically keeps focusing during recording standby, irrespective of the [Continuous AF] setting.
- Depending on the recording conditions or lens used, the AF operation sound may be recorded during video recording.
  If the operation sound bothers you, we recommend recording with [Continuous AF] set to [OFF].
- If the zoom is operated while recording videos, the subject may take a while to come into focus.
- When the following function is being used, [MODE1] switches to [MODE2]:
  - HDMI output ([HDMI] mode)
- [MODE2] does not work during recording standby in the following cases:
  - In low light situations
You can fine-adjust the focusing method for video recording using [Continuous AF].

#### [AF Custom Setting(Video)]

<table>
<thead>
<tr>
<th>[ON]</th>
<th>Enables the following settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>[OFF]</td>
<td>Disables the following settings.</td>
</tr>
</tbody>
</table>

- **[SET]**
  - **[AF Speed]**
    - [+] side: Focus moves at a faster speed.
    - [−] side: Focus moves at a slower speed.
  - **[AF Sensitivity]**
    - [+] side: When the distance to the subject changes significantly, the camera immediately readjusts the focus.
    - [−] side: When the distance to the subject changes significantly, the camera waits for a little before readjusting the focus.
10. Recording Videos – Video Brightness and Coloring

Video Brightness and Coloring

- [Luminance Level]: 357
- [Master Pedestal Level]: 358
- Recording While Controlling Overexposure (Knee): 360
- [ISO Sensitivity (video)]: 362

This section describes the brightness and coloring settings used during video recording.

- In “7. Metering/Exposure/ISO Sensitivity” and “8. White Balance/Image Quality”, the functions described work with both pictures and video. Please also refer to those sections.
  - [Metering Mode]: 252
  - Exposure Compensation: 269
  - Locking Focus and Exposure (AF/AE Lock): 271
  - ISO Sensitivity: 273
  - White Balance (WB): 278
  - [Photo Style]: 285
  - [Filter Settings]: 293
10. Recording Videos – Video Brightness and Coloring

[Luminance Level]

You can set the luminance range to suit the purpose of video recording. You can set to [16-235] or [16-255], the standard for video, or to [0-255], which covers the entire range of luminance, the same as pictures.

Choose [Luminance Level] settings: [0-255]/[16-235]/[16-255]

- When set to a 10-bit [Rec Quality], the setting items change to [0-1023], [64-940], and [64-1023].
- When [Photo Style] is set to [V-Log L], this is fixed to [0-255] ([0-1023]).
- When [Photo Style] is set to [Hybrid Log Gamma], this is fixed to [64-940].
10. Recording Videos – Video Brightness and Coloring

[Master Pedestal Level]

You can adjust the black level, which serves as the reference for images.

1. Set the mode dial to [ ].

2. Select [Master Pedestal Level].

   • [ ] → [ ] → [ ] → [Master Pedestal Level]
3 Adjust master pedestal.

- Rotate  or  .
- Set in the range between –15 and +15.

- [Master Pedestal Level] is not available when using the following function:
  – [V-Log L] ([Photo Style])
Recording While Controlling Overexposure (Knee)

When [Photo Style] is set to [Like709], you can adjust the knee so that recording can be performed with minimal overexposure.

1. Set [Photo Style] to [Like709].

2. Press [Q].
3 **Select a knee setting.**

- Press ◀▶ to select a setting item.

  **[AUTO]**
  Adjusts the compression levels of high-luminance areas automatically.

  **[MANUAL]**
  You can set the luminance where compression starts (knee master point) and the intensity of compression (knee master slope).

  Press ▲▼ to select an item and then press ◀▶ to adjust.

  **[POINT]:** Master knee point
  **[SLOPE]:** Master knee slope

  - Rotate ◀▶ to adjust the knee master point, and ◀▶ to adjust the knee master slope.
  - Values within the following ranges can be set:
    - Master knee point: 80.0 to 107.0
    - Master knee slope: 0 to 99

  **[Off]**

4 **Confirm your selection.**

- Press ◀▶ or ◀▶.
10. Recording Videos – Video Brightness and Coloring

[ISO Sensitivity (video)]

Sets the lower and upper limits for ISO sensitivity when ISO sensitivity is set to [AUTO].

1  Set the mode dial to \[P\].

2  Set [ISO Sensitivity (video)].

\[W\] \([\text{ ]}\) \([\text{ ]}\) \([\text{ ]}\) \([ISO Sensitivity (video)]\)
### Setting Items ([ISO Sensitivity (video)])

<table>
<thead>
<tr>
<th>Setting Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td></td>
<td>• Set in the range between [200] and [6400].</td>
</tr>
<tr>
<td><strong>[ISO Auto Upper Limit Setting]</strong></td>
<td>Sets the upper limit for ISO sensitivity when ISO sensitivity is [AUTO].</td>
</tr>
<tr>
<td></td>
<td>• Set to [AUTO] or in the range between [400] and [12800].</td>
</tr>
</tbody>
</table>

- When [Filter Settings] is set to [High Dynamic], [ISO Sensitivity (video)] cannot be used.
Audio Settings

- [Sound Rec Level Disp.]: 364
- [Mute Sound Input]: 365
- [Sound Rec Gain Level]: 365
- [Sound Rec Level Adj.]: 366
- [Sound Rec Level Limiter]: 366
- [Wind Noise Canceller]: 367
- [Lens Noise Cut]: 368

[Sound Rec Level Disp.]
The sound recording level is displayed on the recording screen.

Select [Sound Rec Level Disp.]
Settings: [ON]/[OFF]

- When [Sound Rec Level Limiter] is set to [OFF], [Sound Rec Level Disp.] is fixed to [ON].
10. Recording Videos – Audio Settings

**[Mute Sound Input]**

This mutes audio input.

![Mute Sound Input Symbol]

Select [Mute Sound Input]

Settings: [ON]/[OFF]

- ![Mute Sound Input Symbol] is displayed on the recording screen.
- The audio input from the external microphone will also be muted.

**[Sound Rec Gain Level]**

This switches the gain of audio input.

![Mute Sound Input Symbol]

Select [Sound Rec Gain Level]

<table>
<thead>
<tr>
<th>[STANDARD]</th>
<th>This is the standard input gain setting. (0 dB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>[LOW]</td>
<td>Audio input is reduced for recording in environments with loud noises. (−12 dB)</td>
</tr>
</tbody>
</table>
10. Recording Videos – Audio Settings

[Sound Rec Level Adj.]
Manually adjust the sound recording level.

1  Select [Sound Rec Level Adj.].
   •  ⇒ [ ] ⇒ [ ] ⇒ [Sound Rec Level Adj.]

2  Press ◀▶ to adjust the sound recording level and then
   press or .
   •  You can adjust the sound recording level within the range from
     [MUTE], [−18dB] to [+12dB] in steps of 1 dB.
   •  Displayed dB values are approximate.

   •  When set to [MUTE], [ ] is displayed in the recording screen.

[Sound Rec Level Limiter]
The sound recording level is adjusted automatically to minimize sound distortion
(crackling noise).

  ⇒ [ ] ⇒ [ ] ⇒ Select [Sound Rec Level Limiter]
Settings: [ON]/[OFF]
10. Recording Videos – Audio Settings

[Wind Noise Canceller]
This reduces the wind noise coming into the built-in microphone while maintaining sound quality.

зи [هو [ Wind] 选 [Wind Noise Canceller]

<table>
<thead>
<tr>
<th>[HIGH]</th>
<th>This effectively reduces the wind noise by reducing the low-pitched sound when a strong wind is detected.</th>
</tr>
</thead>
<tbody>
<tr>
<td>[STANDARD]</td>
<td>This reduces wind noise without loss of sound quality by filtering out only wind noise.</td>
</tr>
<tr>
<td>[OFF]</td>
<td>—</td>
</tr>
</tbody>
</table>

• You may not see the full effect depending on the recording conditions.
• This function works only with the built-in microphone.
  When an external microphone is connected, [Wind Cut] is displayed.
  (Reduction of Wind Noise: 438)
[Lens Noise Cut]
You can reduce the zoom sound produced during video recording when you are using interchangeable lens compatible with power zoom.

潺 ➔ [ ] ➔ [ ] ➔ Select [Lens Noise Cut]
Settings: [ON]/[OFF]

• When this function is used, the sound quality may differ from that during normal operation.
Main Assist Functions

- [SS/Gain Operation]: 370
- [WFM/Vector Scope]: 371
- [Luminance Spot Meter]: 375
- [Zebra Pattern]: 377
- [Frame Marker]: 379
- Color bars/Test Tone: 380

This section describes the main assist functions that are convenient when recording.

* The [Custom] ([Monitor / Display (Video)]) menu has display assist functions such as the center marker. ([Custom] menu ([Monitor / Display (Video))]: 575)
You can switch the units of shutter speed values and gain (sensitivity) values.

\[ \text{[SS/Gain Operation]} \]

\[ \text{[SEC/ISO]} \]
Displays the shutter speed in seconds and the gain in ISO.

\[ \text{[ANGLE/ISO]} \]
Displays the shutter speed in degrees and the gain in ISO.
- The angle can be set in a range between 11° and 358°.
  (When [Synchro Scan] is set to [OFF])

\[ \text{[SEC/dB]} \]
Displays the shutter speed in seconds and the gain in dB.
- 0 dB is equivalent to ISO 200. (When [Photo Style] is set to [V-Log L] or [Hybrid Log Gamma], it is equivalent to ISO 400.)

When [SS/Gain Operation] is set to [SEC/dB], menu names change as shown below:
- [ISO Sensitivity (video)] ➔ [Gain Setting]
- [ISO Auto Lower Limit Setting] ➔ [Auto Gain Lower Limit Setting]
- [ISO Auto Upper Limit Setting] ➔ [Auto Gain Upper Limit Setting]
- [Extended ISO] ➔ [Extended Gain Setting]
- [ISO Displayed Setting] ➔ [Gain Displayed Setting]
10. Recording Videos – Main Assist Functions

[WFM/Vector Scope]

This displays the waveform monitor or the vector scope on the recording screen. You can change the size of the waveform display.

1. Set the mode dial to [WFM].

2. Set [WFM/Vector Scope].

- [WAVE] - Displays a waveform.
- [VECTOR] - Displays the vector scope.
- [OFF] -
3 Select the position to display.

- Press ▲▼◄► to select and then press ◄► or ◄◄.
- You can also move using touch operations.
- You can rotate ◄◄ to change the size of the waveform.
- To return the waveform or vector scope position back to the center, press [DISP.]. With waveform, pressing [DISP.] once again returns the size to the default setting.
10. Recording Videos – Main Assist Functions

❖ Screen Displays

Waveform

• The waveform displayed on the camera indicates the luminance as values based on the conversions below:
  0 % (IRE\(^*1\)): Luminance value 16 (8-bit)
  100 % (IRE\(^*1\)): Luminance value 235 (8-bit)
*1 IRE: Institute of Radio Engineers

(A) 109 % (IRE) (Dotted line)
(B) 100 % (IRE)
(C) 50 % (IRE)
(D) 0 % (IRE)
(E) –4 % (IRE) (Dotted line)
(F) The range between 0 % and 100 % shows dotted lines at intervals of 10 %.

Display example
10. Recording Videos – Main Assist Functions

**Vector scope**

- (G) R (Red)
- (H) YL (Yellow)
- (I) G (Green)
- (J) MG (Magenta)
- (K) B (Blue)
- (L) CY (Cyan)

Display example

- You can also change the position by dragging on the recording screen.
- The waveform and vector scope are not output through HDMI.
- When [WFM/Vector Scope] is set, [Histogram] does not work.
10. Recording Videos – Main Assist Functions

[Luminance Spot Meter]

Specify any spot on the subject to measure the luminance over a small area.

1 Set [Luminance Spot Meter].

- [ ] [ ] [ ] [ ] [Luminance Spot Meter] [ON]
2 Select the position where you want to measure the luminance.

- Press ▲ ▼ ◄ ► to select and then press  or  .
  - You can also change the position by dragging the frame on the recording screen.
  - To return the position back to the center, press [DISP].

(A) Luminance value

❖ Measurement Range

Measuring is possible in the range −7 % to 109 % (IRE).

- When [Photo Style] is set to [V-Log L], this can be measured with “Stop” units.
  (Calculated as “0 Stop”=42 % (IRE))
Parts that are brighter than the benchmark value are displayed with stripes.
You can also set the benchmark value and the breadth of the range so that the stripes are displayed on parts that are within the range of brightness you specify.
10. Recording Videos – Main Assist Functions

- [ZEBRA1] Parts that are brighter than the benchmark value are displayed with [ZEBRA1] stripes.
- [ZEBRA2] Parts that are brighter than the benchmark value are displayed with [ZEBRA2] stripes.
- [ZEBRA1+2] Both [ZEBRA1] and [ZEBRA2] are displayed.
- [OFF] —
- [SET] Sets the benchmark brightness.
  - [Zebra 1]/[Zebra 2]
  - [50%] to [105%]/[BASE/RANGE]

- When [BASE/RANGE] Was Selected with [SET]
  Centered on the brightness set with [Base Level], parts with the brightness in the range set in [Range] are displayed with the stripes.
  - [Base Level] can be set in the range between 0 % and 109 % (IRE).
  - [Range] can be set in the range between ±1 % and ±10 % (IRE).
  - When [Photo Style] is set to [V-Log L], these are set at “Stop” units.
    (Calculated as “0 Stop”=42 % (IRE))

  - [ZEBRA1+2] cannot be selected while you are setting [BASE/RANGE].

A frame with the set aspect ratio is displayed on the recording screen. This allows you to see during recording the angle of view that will be achieved with trimming (cropping) in post-processing.

**Select [Frame Marker]**

| [ON] | Displays video grid lines on the recording screen. |
| [OFF] | — |

**[SET]**

- Sets the aspect ratio of video grid lines.
  - **[Frame Color]:**
    - Sets the color of video grid lines.
  - **[Frame Mask]:**
    - Sets the outer side opacity of video grid lines.
    - [100%] /[75%] /[50%] /[25%] /[OFF]
10. Recording Videos – Main Assist Functions

**Color bars/Test Tone**

The color bars are displayed on the recording screen. A test tone is output while the color bars are being displayed.

[SMPTE]

[EBU]

[ARIB]

Select [Color Bars]

Settings: [SMPTE]/[EBU]/[ARIB]

• To end the display, press .

380
Adjusting the Test Tone

There are 4 levels ([-12dB], [-18dB], [-20dB], and [MUTE]) of test tone to select.

1. Rotate 🎧, 🎧, or 🎧 to select the test tone level.

- The color bars and test tone will be recorded on the video if video recording is started while the color bars are being displayed.
- The brightness and coloring that appear on the camera’s monitor or viewfinder may differ from those that appear on another device such as an external monitor.
By recording using a frame rate that is different to the playback frame rate, you can record smooth slow motion video and fast motion video.

<table>
<thead>
<tr>
<th>Slow Motion Video (Overcrank Recording)</th>
<th>Set a number of frames that is higher than the recording frame rate of the [Rec Quality]. For example: When recording at 48 fps and set to a 24.00p [Rec Quality], the speed is halved.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fast Motion Video (Undercrank Recording)</td>
<td>Set a number of frames that is lower than the recording frame rate of the [Rec Quality]. For example: When recording at 12 fps and set to a 24.00p [Rec Quality], the speed is doubled.</td>
</tr>
</tbody>
</table>
1. Set the mode dial to [ ].

3. Select a recording quality with which you can use [Variable Frame Rate] recording.

   • Items with which you can use [Variable Frame Rate] are indicated as [VFR available].

   • Recording qualities with which you can use [Variable Frame Rate] recording
     (List of Recording Qualities That Enable Special Videos to be Recorded: 416)
10. Recording Videos – [Variable Frame Rate]

4 Set [Variable Frame Rate].
   - Press  to switch between [ON] and [OFF].

5 Set the frame rate.
   - Rotate ,  or  to select a numeric value, then press  or .

△ Available Frame Rate Setting Ranges
The frame rate you can set differs depending on the [Rec Quality] settings.

<table>
<thead>
<tr>
<th>[Rec Quality]</th>
<th>Frame rate</th>
</tr>
</thead>
</table>
| 4K Anamorphic (4:3) video      | 2 fps to 50 fps
| C4K video/4K video             | 2 fps to 60 fps |
| FHD video                     | 2 fps to 180 fps

*1 When set to a 23.98p or 24.00p [Rec Quality], a frame rate exceeding 48 fps cannot be set.
*2 When the frame rate is set to 150 fps or higher, [Image Area of Video] will be set to [FULL].
10. Recording Videos – [Variable Frame Rate]

- You can filter to show just the recording qualities where [Variable Frame Rate] can be used. (☞[Filtering]: 345)
- We recommend using a tripod when recording images with [Variable Frame Rate].
- Focus mode switches to MF. (When using an interchangeable lens with no focus ring, you cannot set focus with MF.)
- If you press the [AF ON] only before recording starts, the focus will be adjusted automatically.
  – You can also perform the same operation by pressing the Fn button assigned with [AF-ON]. (☞Fn Buttons: 471)
- Audio will not be recorded during variable frame rate recording.
- When set to a frame rate exceeding 60 fps, there may be some deterioration in recording quality.
- When the following functions are being used, [Variable Frame Rate] is not available:
  – [Filter Settings]
  – [Live Cropping]
Smoothly transitions the focus position from the current position to a position registered in advance.

1. Set the mode dial to [SM].

2. Select [Focus Transition].
10. Recording Videos – [Focus Transition]

3 Set the recording settings.

[Start]
Start recording.

[Focus Pull Setting]
Registers the focus position.
• The setting screen for the focus position is displayed when you select either [1], [2], or [3]. Use the same procedure as MF (Record Using MF: 167) to check the focus, then press or to register the focus position.

[Focus Transition Speed]
Sets the moving speed of focus.
• Moving speed: [SH] (fast) to [SL] (slow)

[Focus Transition Rec]
Starts Focus Transition when recording starts.
• Select the position registered with [Focus Pull Setting].

[Focus Transition Wait]
Sets the wait time before the start of Focus Transition.

4 Close the menu.
• Selects [Start], and press or .
• The recording screen is displayed.
• To return to the setting screen, press [DISP].

387
5 **Start recording.**
- Press the video rec. button.
- If you have enabled [Focus Transition Rec], Focus Transition will start when you start recording a video.

6 **Start Focus Transition.**
- Press ◀️ to select [1], [2], or [3], and then press 🌡️ or 🌡️.
- When [Focus Transition Wait] is set, Focus Transition starts after the set time has elapsed.

(A) Current focus position
(B) Registered focus position
10. Recording Videos – [Focus Transition]

7 End Focus Transition.
   ● Press [Q].

8 Stop recording.
   ● Press the video rec. button once again.

- Maintain the same distance to the subject after setting the focus position.
- The moving speed of focus varies depending on the lens being used.
- While using [Focus Transition], it is not possible to focus on anything other than the registered focus position.
- Any of the operations below will clear the focus position settings.
  - Operating the camera on/off switch
  - Zoom operation
  - Switching the focus mode
  - Switching the recording mode
  - Replacing the lens
- When the following functions are being used, [Focus Transition] is not available:
  - [Variable Frame Rate]
  - [Live Cropping]
- [Focus Transition] cannot be used when using an interchangeable lens that does not support the focus mode [AFC].
By cropping a part of the image from the image displayed in the live view, it is possible to record FHD video that incorporates panning and zooming with the camera staying in a fixed position.

- Use a tripod to minimize camera shake.
10. Recording Videos – [Live Cropping]

1. Set the mode dial to [ ].

2. Set [Rec. File Format].
   - [ ] ➔ [ ] ➔ [Rec. File Format] ➔ [MP4]/[MOV]

3. Select a recording quality with which you can record [Live Cropping] video.
   - [ ] ➔ [ ] ➔ [Rec Quality]
   - A recording quality with which you can record [Live Cropping] video (List of Recording Qualities That Enable Special Videos to be Recorded: 416)
4 Set the time for panning or zooming.
   • $\Rightarrow [\text{[}} \Rightarrow [\text{[}} \Rightarrow [\text{Live Cropping}] \Rightarrow [40\text{SEC}]/[20\text{SEC}]
   • If you have selected a recording quality where Live Cropping recording is not available, the camera switches to an FHD video recording quality where recording is possible.

5 Set the cropping start frame.
   • Select the range to be cropped and press $\text{[}}$ or $\text{[}}$.

(A) Cropping start frame
6 Set the cropping end frame.

- Select the range to be cropped and press \( \text{[B]} \) or \( \text{[QG]} \).
- To redo the settings for the position and size of the start frame and the end frame, press \( \text{[ pred]}. \)

(B) Cropping end frame
10. Recording Videos – [Live Cropping]

7 Start Live Cropping recording.

- Press the video rec. button.
- When the set operating time has elapsed, recording automatically ends.
  To end recording midway, press the video rec. button again.

(C) Elapsed recording time
(D) Set operating time
10. Recording Videos – [Live Cropping]

Operations for Setting the Cropping Frame

<table>

</tr>
</tbody>
</table>

- When applying the LUT data, [LUT] is displayed on the recording screen.
- Up to 4 LUT data files can be registered.
10. Recording Videos – Log Recording

Reading LUT Files

• The following LUT data can be used:
  – The "*.vlt" format, which meets the requirements specified in the "VARICAM 3DLUT REFERENCE MANUAL Rev.1.0"
  – The number of characters that can be used in a file name differs depending on the file system of the card.
    (Use alphanumeric characters for the file name.)
  • FAT32 (SD/SDHC card): Up to 8 characters (excluding extension).
  • exFAT (SDXC card): Up to 255 characters (including the extension).
• Save the LUT data with a file extension of "*.vlt" in the root directory of the card (the folder opened when the card is opened on a PC).

1 Insert a card on which LUT data is saved into the camera.
2 Select [Read LUT File].
   • [ ] [ ] [ ] [V-LogL View Assist] [Read LUT File] [Card Slot 1]/[Card Slot 2]
3 Press ▲▼ to select the LUT data to read and then press or .
4 Press ▲▼ to select the location to register the data, and then press or .
   • When registered items are selected, they will be overwritten.
10. Recording Videos – HLG Videos

**HLG Videos**

- [Hybrid Log Gamma] settings: 401
- [HLG View Assist]: 404

Record videos with the wide dynamic range of the HLG format. You can record in very bright light where overexposure can occur or in dark areas where underexposure can occur, maintaining the rich yet subtle colors you can see with your naked eye. You can view the video that you record by outputting via HDMI to devices (TVs, etc.) that support the HLG format, or playing back directly on supporting devices.

* "HLG" is a standardized HDR video format that converts and expands the dynamic range of compressed high-luminance image data on a supported device.
[Hybrid Log Gamma] settings

1. Set the mode dial to [VW].

2. Set [Rec. File Format].
   - [ ] ➔ [ ] ➔ [ ] ➔ [Rec. File Format] ➔ [MP4]/[MOV]
3 Select a recording quality with which you can record HLG video.
- [Rec Quality]  
  - Items available for recording with HLG video are indicated as [HLG available].
  - Recording qualities with which you can record HLG video (List of Recording Qualities That Enable Special Videos to be Recorded: 416)

4 Set [Photo Style] to [Hybrid Log Gamma].
- [Photo Style]  
  - You can also display the setting screen of [Photo Style] by pressing [ ] in the recording screen.
10. Recording Videos – HLG Videos

• When the [Rec. File Format] has been set to [MOV], you can display just the recording qualities where HLG video recording can be used. (⇒ [Filtering]: 345)
• The monitor and viewfinder on this camera do not support display of HLG format images.
  With [Monitor] in [HLG View Assist] in the [Custom] ([Monitor / Display (Video)]) menu, you can display the images converted for monitoring on the monitor/viewfinder of this camera. (⇒ [HLG View Assist]: 404)
• HLG images are shown dark on devices that do not support the HLG format.
  With [HDMI] in [HLG View Assist] of the [Custom] ([Monitor / Display (Video)]) menu, you can set the conversion method for images displayed for monitoring. (⇒ [HLG View Assist]: 404)

**ISO Sensitivity When [Hybrid Log Gamma] Is Set**
The lower limit of available ISO sensitivities will become [400].
10. Recording Videos – HLG Videos

**[HLG View Assist]**

At recording or playback of HLG video, this displays images with converted color gamut and brightness on the camera monitor/viewfinder, or outputs these over HDMI.

![HDMI] ⇒ [ ] ⇒ [ ] ⇒ [HLG View Assist] ⇒ [Monitor] or [HDMI]

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
| [MODE1]  | Converts with an emphasis on bright areas such as sky.  
• [MODE1] is displayed on the recording screen. |
| [MODE2]  | Converts with an emphasis on the brightness of a main subject.  
• [MODE2] is displayed on the recording screen. |
| [OFF]    | Displays without converting color gamut and brightness.  
• HLG images appear darker on devices that do not support the HLG format. |

*1 Can only be set while [HDMI] is selected.
Anamorphic Recording

- 6K/4K Anamorphic (4:3) video: 406
- [Anamorphic Desqueeze Display]: 407

This camera can record video with a resolution of 6K-A/4K-A (6K/4K anamorphic (4:3) video) that is compatible with anamorphic recording with an aspect ratio of 4:3.

Along with the normal 16:9 video aspect ratio, you can select the recording quality suited to anamorphic recording.

- It is also possible to switch to an image stabilizer that suits anamorphic recording. ([Image Stabilizer Settings: 246])

* When [Rec. File Format] is set to [MOV], by filtering [Rec Quality] by the number of pixels, you can display just those recording qualities with resolutions and aspect ratios that meet the conditions. ([Filtering]: 345)
10. Recording Videos – Anamorphic Recording

**6K/4K Anamorphic (4:3) video**

   - ![Image]

2. Select a recording quality wherein you can record 6K/4K Anamorphic (4:3) video.
   - ![Image]
[Anamorphic Desqueeze Display]

Display the de-squeezed images suited to the magnification of the anamorphic lens on this camera.
Using the [Frame Marker], it is also possible to impose on display the frame of the angle of view when cropping after de-squeeze editing.

1. Set the mode dial to [ ].
## 2 Set [Anamorphic Desqueeze Display].

- [ ] [ ] [ ] [Anamorphic Desqueeze Display]

<table>
<thead>
<tr>
<th>Magnification</th>

</tbody>
</table>

* Make settings to suit the magnification of the anamorphic lens you are using.
3 Set [Frame Marker].

- Images output via HDMI are not de-squeezed.
- This camera is not compatible with de-squeeze editing of video recorded with anamorphic recording. Use compatible software.
[Synchro Scan]

Fine-adjust the shutter speed to reduce flickering and horizontal stripes. The shutter speed set in Synchro Scan is saved separately from the shutter speed used for normal recording. In the Synchro Scan setting screen you can call up the current shutter speed for normal recording and adjust it.

1. Set the mode dial to [ ].

2. Set the exposure mode to [S] or [M].
   - [ ] ⇒ [ ] ⇒ [ ] ⇒ [Exposure Mode] ⇒ [S]/[M]
3 Set [Synchro Scan].

- Rotate , , or to select a numeric value, then press or .
- You can call up the current shutter speed for normal recording by pressing [DISP].
- Adjust the shutter speed while looking at the screen so that flickering and horizontal stripes will be minimized.

4 Set the shutter speed.

- Rotate , , or to select a numeric value, then press or .
- You can call up the current shutter speed for normal recording by pressing [DISP].
- Adjust the shutter speed while looking at the screen so that flickering and horizontal stripes will be minimized.

- When you set [Synchro Scan] to [ON], the available shutter speed range becomes narrower.
10. Recording Videos – [Loop Recording (video)]

[Loop Recording (video)]

Even when recording uses up the card’s free space, the camera continues
the recording by deleting the oldest segment of the recorded data.

1  Set the mode dial to [ \\ ].

2  Set [Rec. File Format] to [MOV].

   • [ ] ➔ [ ] ➔ [ ] ➔ [Rec. File Format] ➔ [MOV]
10. Recording Videos – [Loop Recording (video)]

3 Set [Loop Recording (video)].

• [ ] ➔ [ ] ➔ [Loop Recording (video)] ➔ [ON]
  • ) is displayed on the recording screen.
  • When the recording fills the card to capacity, loop recording starts and video recording time is no longer displayed.

• Make sure the camera does not turn off during recording.
• Loop recording cannot start if there is insufficient available capacity on the card.
• When the recording time exceeds 12 hours, recording continues with data being deleted in order from the point where recording started.
• When the following functions are being used, [Loop Recording (video)] is not available:
  – [Rec Quality] with a bit rate of 400 Mbps
  – [Variable Frame Rate]
  – [Live Cropping]
To avoid video loss due to unforeseen interruptions to the power supply, recorded video is divided every few minutes while MOV video is being recorded.

- The divided videos are saved as one group image.

2. Set [Segmented File Recording].

---

### [Segmented File Recording]

To avoid video loss due to unforeseen interruptions to the power supply, recorded video is divided every few minutes while MOV video is being recorded.

- The divided videos are saved as one group image.

2. Set [Segmented File Recording].
10. Recording Videos – [Segmented File Recording]

• When the following function is being used, [Segmented File Recording] is not available:
  – [Loop Recording (video)]

11. Connections with External Devices (Video)

- HDMI Devices (HDMI Output): 422
- HDMI Output Image Quality (Resolution/Frame Rate): 429
- HDMI Output Settings: 432
- External Microphones (Optional): 436
- XLR Microphone Adaptor (Optional): 439
- Headphones: 441
HDMI Devices (HDMI Output)

• Attaching the Cable Holder: 424
• Images Output via HDMI: 427

You can record while outputting the camera images to an external monitor or external recorder connected with an HDMI cable.
• HDMI output control differs between during recording and during playback.
  For HDMI output settings during playback (➔[HDMI Connection]: 590)

Getting started:
• Turn off the camera and the external monitor/external recorder.
1. Connect the camera and an external monitor or external recorder with a commercially available HDMI cable.

- (A) [HDMI] socket (Type A)
- (B) External monitor
- (C) External recorder

• Check the direction of the terminals and plug in/out straight holding onto the plug. (Inserting at an angle can deform the terminal and cause malfunction.)
• Do not connect the cable to the wrong terminals. This may cause a malfunction.

• Use a “High Speed HDMI cable” with the HDMI logo. Cables that do not comply with the HDMI standards will not work.
  “High Speed HDMI cable” (Type A–Type A plug, up to 1.5 m (4.9 feet) long)
Attaching the Cable Holder

Use of the supplied cable holder prevents detachment of the cable and damage to the terminals.

- Put the camera on a stable surface to perform this task.

Example: Attaching to an HDMI cable

1. **While pushing (A) (1), slide the clamp portion of the cable holder to remove it (2).**

2. **After placing the camera on a stable surface, loosely mount the cable holder to the mount on the camera (3), and secure the cable holder by rotating the screws in the direction of the arrows (4), (5).**
11. Connections with External Devices (Video) – HDMI Devices (HDMI Output)

3 Attach the HDMI cable to the clamp portion (6).

4 Slide the clamp portion to attach it to the cable holder (7).

5 Connect the HDMI cable to the [HDMI] socket (8).
   • You can also connect the HDMI cable and USB connection cable at the same time when the cable holder is attached.

(B) Leave some slack so that this section has a length of at least 10 cm (0.33 feet).
11. Connections with External Devices (Video) – HDMI Devices (HDMI Output)

Removing the cable holder
To remove the cable holder, follow the steps for attaching it in the reverse order.

- Do not use any other USB connection cables except the supplied USB connection cables.
- We recommend using an HDMI cable with a thickness diameter of 6 mm (0.24 inch) or less.
- It may not be possible to attach HDMI cables of certain shapes.
- Keep the clamp portion of the cable holder out of reach of children to prevent swallowing.
Images Output via HDMI

The images output via HDMI differ depending on the recording mode.

❖ [Rec] Mode

Aspect ratio, resolution, and frame rate output is according to the [Rec Quality] settings in the [Video] ([Image Format]) menu. Resolution and frame rate can be down-converted for output according to the application. YUV 4:2:2 is used for YUV and bit value output.

<table>
<thead>
<tr>
<th>Recording to card</th>
<th>HDMI output</th>
</tr>
</thead>
<tbody>
<tr>
<td>4:2:2 10-bit</td>
<td>4:2:2 10-bit</td>
</tr>
<tr>
<td>4:2:0 10-bit</td>
<td>4:2:2 10-bit</td>
</tr>
<tr>
<td>4:2:0 8-bit</td>
<td>4:2:2 8-bit</td>
</tr>
</tbody>
</table>

Resolution, frame rate

▪ Resolution and frame rate output according to the following menu combinations:
▪ 6K/4K Anamorphic (4:3) video is output with a 4K or FHD resolution.
▪ For details (➔ Image Quality When Outputting via HDMI: 430)

▪ When set to a 4:3 [Rec Quality], bands are added to the left and right of the image for output.
▪ Output may be in 8-bit if you output to devices that do not support 10-bit.
11. Connections with External Devices (Video) – HDMI Devices (HDMI Output)

- **[IA]/[P]/[A]/[S]/[M] Mode**
  - Output is the same as [2M] mode during video recording.
  - During recording standby, it is output according to the setting of [Aspect Ratio] in the [Photo] ([Image Quality]) menu.
    - When set to any [Aspect Ratio] other than 16:9, bands are added to the left and right of the image for output.
    - Resolution, frame rate, YUV, and bit value output matches the connected device.

- **Notice Regarding HDMI Output**
  - It may take some time for the output method to change.
  - When you use the HDMI output during recording, the image may be displayed with a time lag.
  - Beep sounds, AF beep, and electronic shutter sounds are muted during HDMI output.
  - When you check the image and audio from the TV connected to the camera, the microphone of the camera may pick up the sound from the speakers of the TV, producing an abnormal sound (audio feedback). If this occurs, move the camera away from the TV or lower the volume on the TV.
  - Certain setting screens are not output via HDMI.
  - There is no output via HDMI while you are recording with the following functions:
    - [6K/4K PHOTO]/[Post-Focus]
  - If the temperature of the camera rises, [A] may be displayed, recording may stop, and some functions may become unavailable temporarily. Wait until the camera cools down.
HDMI Output Image Quality (Resolution/Frame Rate)

• Settings for Down-Convertible: 429

Settings for Down-Convertible

Make settings for the down-conversion of resolution and frame rate for HDMI output in the [ ] mode.

[ ] ⇒ [ ] ⇒ [ ] ⇒ [HDMI Rec Output] ⇒ Select [Down Convert]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[AUTO]</td>
<td>Outputs by down-converting to match the connected device.</td>
</tr>
<tr>
<td>[4K/30p] ([4K/25p])</td>
<td>Outputs by down-converting resolution to 4K and frame rate to either 29.97p or 25.00p.</td>
</tr>
<tr>
<td>[1080p]</td>
<td>Down-converts resolution to FHD (1080), and outputs as progressive.</td>
</tr>
<tr>
<td>[1080i]</td>
<td>Down-converts resolution to FHD (1080), and outputs as interlaced.</td>
</tr>
<tr>
<td>[OFF]</td>
<td>Outputs at the resolution and recording frame rate of the [Rec Quality].</td>
</tr>
</tbody>
</table>

• The items you can select depend on the [System Frequency] setting.
• 6K/4K Anamorphic (4:3) video is output with a 4K or FHD resolution.
• If down-converting, AF may take longer than usual for focusing, and the performance of continuous focus tracking may deteriorate.
11. Connections with External Devices (Video) – HDMI Output Image Quality (Resolution/Frame Rate)

❖ Image Quality When Outputting via HDMI

Output is with the resolution and frame rate according to the combinations of the [Rec Quality] and [Down Convert] settings.
- When [Down Convert] is set to [AUTO], the output matches the connected device.
- There is no HDMI output when setting combinations result in a [—] in the below tables.

[System Frequency]: [59.94Hz (NTSC)]

HDMI Output Settings

- Outputting the Camera Information Display via HDMI: 432
- Outputting Control Information to an External Recorder: 433
- Outputting Down-converted Audio to an HDMI Device: 434
- Outputting Audio via HDMI: 434
- Output the enlarged display of MF assist via HDMI: 435

### Outputting the Camera Information Display via HDMI

Output the camera information display to an external device connected by HDMI.

Menu: [A] [P] [A] [S] [M] [HDMI Rec Output] [Info Display]

Settings: [ON]/[OFF]
Outputting Control Information to an External Recorder

Recording start and stop control information is output to an external recorder connected by HDMI.

⇒ [ ] ⇒ [ ] ⇒ [HDMI Rec Output] ⇒ Select [HDMI Recording Control]

Settings: [ON]/[OFF]

• [HDMI Recording Control] can be set when [HDMI Time Code Output] is set to [ON] in [ ] mode.
• Control information is output when pressing the video rec. button or shutter button, even if the video cannot be recorded (such as when there is no card inserted into the camera).
• Only compatible external devices can be controlled.
Outputting Down-converted Audio to an HDMI Device

When an XLR Microphone Adaptor (DMW-XLR1: optional) is attached, audio is down-converted to a format suitable for the connected HDMI external device before being output.

Select [Sound Down Convert]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO</td>
<td>Output is down-converted to match the connected device.</td>
</tr>
<tr>
<td>OFF</td>
<td>Output is according to the settings in [XLR Mic Adaptor Setting].</td>
</tr>
</tbody>
</table>

Outputting Audio via HDMI

Output audio to an external device connected by HDMI.

Select [Sound Output (HDMI)]

Settings: [ON]/[OFF]
11. Connections with External Devices (Video) – HDMI Output Settings

Output the enlarged display of MF assist via HDMI

The MF Assist enlarged display is output to the external device connected via HDMI.

 ➔ [ ] ➔ [ ] ➔ [HDMI Rec Output] ➔ Select [HDMI MF Assist Output]

Settings: [ON]/[OFF]

• When [HDMI MF Assist Output] is set to [OFF] and the MF Assist enlarged display is being shown, the camera information display is not output via HDMI.
External Microphones (Optional)

With a Stereo Shotgun Microphone (DMW-MS2: optional) or Stereo Microphone (VW-VMS10: optional), you can record higher quality audio compared to the built-in microphone.

• Some optional accessories may not be available in some countries.

1 Set the camera on/off switch to [OFF].
2 Connect the camera and external microphone.
  • If mounting the external microphone on the camera hot shoe, remove the hot shoe cover. (⇒ Removing the Hot Shoe Cover: 305)

(A) Hot shoe
(B) [MIC] socket

• Do not use the stereo microphone cables with the length of 3 m (9.8 feet) or more.
Setting the Sound Pickup Range (DMW-MS2: Optional)

When using the Stereo Shotgun Microphone (DMW-MS2: optional), you can set the microphone sound pickup range.

1. Select [Special Mic.].
   - [ ] → [ ] → [ ] → [Special Mic.]

   - [STEREO]: Picks up sound over a wide area.
   - [LENS AUTO]: Picks up sound from a range automatically set by the lens angle of view.
   - [SHOTGUN]: Helps prevent picking up background noise, and records sound from a specific direction.
   - [S.SHOTGUN]: Narrows the sound pickup range more than with [SHOTGUN].
   - [MANUAL]: Sets the range manually for sound pickup.

2. (When [MANUAL] is selected)
   Press [ ] to adjust the sound pickup range and then press [ ] or [ ].

   - You can register the [MANUAL] sound pickup range setting in a Fn button:
     [ ] → [ ] → [Fn Button Set] → [Setting in REC mode] → [Special Mic. Directivity Adjust] (Fn Buttons: 471)
Reduction of Wind Noise

This reduces wind noise when an external microphone is connected.

Press [ ] [ ] [ ] to select [Wind Cut]

Settings: [HIGH]/[STANDARD]/[LOW]/[OFF]

- While the external microphone is connected, [ ] is displayed on the screen.
- When an external microphone is connected, [Sound Rec Level Disp.] automatically turns [ON], and the recording level is displayed on the screen.
- When the external microphone is attached, do not carry the camera by holding the external microphone. It may become detached.
- If noises are recorded when using the AC adaptor, use the battery.
- Setting [Wind Cut] may alter the usual sound quality.
- For details, refer to the operating instructions for the external microphone.
11. Connections with External Devices (Video) – XLR Microphone Adaptor (Optional)

XLR Microphone Adaptor (Optional)

By attaching an XLR Microphone Adaptor (DMW-XLR1: optional) to the camera, you can use a commercially available XLR microphone to enable the recording of superior-quality high-res/stereo audio.

(A) Hot shoe
(B) Commercially available XLR microphone

Getting started:
• Turn off the camera, and remove the hot shoe cover. (➡ Removing the Hot Shoe Cover: 305)

1 Attach the XLR Microphone Adaptor to the hot shoe.
2 Set the camera on/off switch to [ON].
11. Connections with External Devices (Video) – XLR Microphone Adaptor (Optional)

3 Select [XLR Mic Adaptor Setting].

- [XLR Mic Adaptor Setting]

<table>

</tbody>
</table>

- While an XLR Microphone Adaptor is attached, [ ] is displayed on the screen.
- When [XLR Mic Adaptor Setting] is set to other than [OFF], the following settings are fixed:
  - [Sound Rec Level Limiter]: [OFF]
  - [Wind Noise Canceller]: [OFF]
  - [Sound Output]: [REC SOUND]
- [Sound Rec Gain Level] and [Sound Rec Level Adj.] cannot be used when [XLR Mic Adaptor Setting] is set to other than [OFF].
- When the XLR Microphone Adaptor is attached, [Sound Rec Level Disp.] automatically turns [ON], and the recording level is displayed on the screen.
- When the XLR Microphone Adaptor is attached, do not carry the camera by holding the XLR Microphone Adaptor. It may become detached.
- If noises are recorded when using the AC adaptor, use the battery.
- For details, refer to the operating instructions for the XLR Microphone Adaptor.
11. Connections with External Devices (Video) – Headphones

**Headphones**

You can record videos while monitoring their sound by connecting commercially available headphones to the camera.

(A) Headphone socket

- Do not use the headphone cables with the length of 3 m (9.8 feet) or more.
- When headphones are connected, beep sounds, AF beep, and electronic shutter sounds are muted.
11. Connections with External Devices (Video) – Headphones

Switching the Sound Output Method

- [ ] - [ ] - Select [Sound Output]

<table>
<thead>
<tr>
<th>[REALTIME]</th>
<th>Audio without time lag. It may differ from the sound recorded in videos.</th>

</table>

- The setting is fixed to [REC SOUND] in the following cases:
  - During output of audio via HDMI
  - When [Special Mic.] is set to [LENS AUTO], [SHOTGUN], [S.SHOTGUN], or [MANUAL]
  - When using an XLR Microphone Adaptor (DMW-XLR1: optional)

Adjusting the Headphone Volume

Connect the headphones and rotate .

- [ ]: Reduces the volume.
- [ ]: Increases the volume.
- You can also adjust the volume by touching [ ]/ [ ] on the playback screen.

To adjust the volume using the menu:

1. Select [Headphone Volume].
   - [ ] - [ ] - [ ] - [Headphone Volume]
2. Press ▲▼ to adjust the headphone volume and then press or .
   - It can be adjusted in a range of [0] to [LEVEL15].
12. Playing Back and Editing of Images

- Playing Back Pictures: 444
- Playing Back Videos: 446
- Switching the Display Mode: 450
- Group Images: 456
- Deleting Images: 458
- [RAW Processing]: 460
- [Video Divide]: 467

This chapter explains how to play back and delete pictures and videos. It also explains editing using [RAW Processing] ([RAW Processing]: 460) and [Video Divide] ([Video Divide]: 467).

- Images recorded on devices other than this one may not be played back or edited correctly on this camera.
Playing Back Pictures

1 Display the playback screen.
   - Press [ ].

2 Select a picture.
   - Select the pictures by pressing [ ]
   - You can move continuously through images by pressing and holding [ ]
   - You can also select by rotating or .
   - You can also move through images by dragging the screen horizontally. By leaving your finger touching the left or right edge of the screen after dragging to change the image, you can continuously move through images.

   (A) Card slot
3 Stop playback.
   • Press the shutter button halfway.
   • You can also stop playback by pressing [ ].

Switching the Card to Display
You can switch the card displayed just by pressing [ ] during playback.
   • You can also perform the same operation by pressing the Fn button assigned with [Card Slot Change]. (Fn Buttons: 471)

1 Press [ ].

2 Press ▲▼ to select [Card Slot 1] or [Card Slot 2] and then press [ ] or [ ].
12. Playing Back and Editing of Images – Playing Back Videos

Playing Back Videos

- Extracting a Picture: 449

1. Display the playback screen.
   - Press [ ].

2. Select a video.
   - For information about how to select images (Playing Back Pictures: 444)
   - The [ ] video icon is displayed for a video.
   - The video recording time is displayed on the screen.

(A) Video recording time
3 **Play back the video.**

- Press ▲.
- You can also start playback by touching [▶] at the center of the screen.

(B) Elapsed playback time
(C) Playback bar

4 **Stop playback.**

- Press ▼.
12. Playing Back and Editing of Images – Playing Back Videos

Operations During Video Playback

<table>

</table>
| ◀                | —              | Performs fast-rewind playback.  
  • If you press ◀ again, the fast-rewind speed increases.  
  Performs frame-by-frame rewinding (while paused). |
| ▶                | —              | Performs fast-forward playback.  
  • If you press ▶ again, the fast-forward speed increases.  
  Performs frame-by-frame forwarding (while paused). |
| —                | —              | Selects the frame to display. |
| 文件保存 | — | Exports a picture (while paused). (“Extracting a Picture: 449”) |
| —                | —              | Reduces the volume.        |
| —                | —              | Increases the volume.      |

• The camera can play back videos in MP4, and MOV formats.  
• Video recorded with a [System Frequency] setting that is different to the current one cannot be played back.
Extracting a Picture

Extract one frame of a video and save it as a JPEG image.

1. **Pause playback at the position you wish to extract a picture.**
   - Press ▲.
   - To fine-adjust the position, press ◄► (rewind frame-by-frame or forward frame-by-frame).

2. **Save the picture.**
   - Press [ ] or [ ].
   - You can also save the picture by touching [Save].

- The picture created from the video is saved with a [FINE] picture quality. The picture is saved with a size according to the resolution of the [Rec Quality].
- The image quality of a picture created from a video may be coarser than normal.
- [ ] is displayed on the detailed information display screen for a picture created from a video.
Switching the Display Mode

- **Enlarged Display**: 450
- **Thumbnail Screen**: 452
- **Calendar Playback**: 454

You can use features to do things like enlarge recorded images for display and switch to thumbnail display to display multiple images at once (multiplayback). You can also switch to calendar display to show images of a selected recording date.

### Enlarged Display

Playback images can be displayed enlarged (Playback Zoom).

1. **Enlarging the playback screen.**
   - Rotate 
   - The playback screen is enlarged in the order of 2\(\times\) \(\rightarrow\) 4\(\times\) \(\rightarrow\) 8\(\times\) \(\rightarrow\) 16\(\times\).
   - Rotating 
   - Pictures taken with [Picture Quality] set to [RAW] cannot be displayed enlarged at 16\(\times\).

![Example Enlarged Image](image.png)

[ ] ➔ [ ] ➔ [Magnify from AF Point] ➔ [Magnify from AF Point]: 600)
12. Playing Back and Editing of Images – Switching the Display Mode

Thumbnail Screen

1 Switch to thumbnail display.
   • Rotate to the left.
   • The display is switched in the order of 12-image screen  ➔ 30-image screen.
   • Rotating to the left during 30-image screen display switches to calendar display. (Calendar Playback: 454)
   • Rotating to the right returns to the previous display.
   • You can also switch the display by touching an icon.
     - [ ]: 1-image screen
     - [ ]: 12-image screen
     - [ ]: 30-image screen
     - [ ]: Calendar (Calendar Playback: 454)

2 Select an image.
   • Press ▲▼◄► to select an image and then press or .
12. Playing Back and Editing of Images – Switching the Display Mode

- When you press [ ] while a thumbnail is being displayed, you can switch to the card being displayed.
- You can scroll the screen by dragging the thumbnail display up or down.
- Images indicated with [ ] cannot be played back.
1. **Switch to calendar playback.**
   - Rotate ⬅️ to the left.
   - The display is switched in the order of thumbnail screen (12 images) ➔ Thumbnail screen (30 images) ➔ Calendar playback.
   - Rotating ➔ to the right returns to the previous display.

2. **Select the recording date.**
   - Press ▲▼◄► to select a date and then press ▽ or ◀.

3. **Select an image.**
   - Press ▲▼◄► to select an image and then press ▽ or ◀.
   - Rotating ◀ to the left returns to calendar playback.
12. Playing Back and Editing of Images – Switching the Display Mode

- The card to display cannot be switched during calendar display.
- The range that the calendar can be displayed is January 2000 to December 2099.
12. Playing Back and Editing of Images – Group Images

Group Images

Images recorded with Time Lapse Shot or Stop Motion Shooting are handled as group images in the camera, and can be deleted and edited on a group basis. (For example, if you delete a group image, all images in the group are deleted.) You can also delete and edit each image in a group individually.

- Images Handled as Group Images by the Camera

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>

<tr>
<td><img src="image5.png" alt="Icon" /></td>
<td>Group images recorded with [Segmented File Recording].</td>
</tr>
</tbody>
</table>
Playing and Editing the Images in a Group One by One

Operations such as displaying thumbnails and deleting images are available with images in groups just as with normal playback.

1. Select the group image in the playback state. (Playing Back Pictures: 444)
2. Press ◀ to display the images in the group.
   • You can also perform the same operation by touching the group image icon.
3. Press ◀ to select an image.
   • To return to the normal playback screen, press ▼ or touch [▶] again.
Deleting Images

- Images cannot be restored once they have been deleted. Carefully confirm the images before deletion.
- You can only delete the images in the card of the selected card slot.
- If you delete a group image, all images in the group are deleted.

1. Press [ ] in playback state.
12. Playing Back and Editing of Images – Deleting Images

2 Press ▲▼ to select the deletion method and then press [6] or [7].

[Delete Single]
Deletes the selected image.

[Delete Multi]
Selecting and deleting multiple images.

1 Press ▲▼ to select the image to delete and then press [6] or [7].
   • [8] is displayed for the selected image.
   • If you press [6] or [7] again, the selection is canceled.
   • Up to 100 images can be selected.

2 Press [DISP.] to delete the selected image.

- To switch the card selected for deleting images, press [2] and then select the card slot.
- Depending on the number of images to be deleted, it may take some time to delete them.
- You can set which of [Yes] and [No] is selected initially in the confirmation screen when deleting:
  [2] ⇒ [1] ⇒ [Delete Confirmation] (⇒ [Delete Confirmation]: 608)
- All images on the card can be deleted:
  [2] ⇒ [1] ⇒ [Delete All Images] (⇒ [Delete All Images]: 608)
[RAW Processing]

This processes pictures taken in RAW format on the camera and saves them in JPEG format.

1. Select [RAW Processing].

   ![Navigation Menu]

2. Select the RAW image.

   - Press ◀ to select an image and then press ◀ or ◀.
   - When group images are selected, press ◀ and then select an image in the group.
   - Press ◀ again to return to the normal selection screen.
   - The settings from the time of recording are reflected in displayed images.
3 **Select a setting item.**
- Press ▲▼ to select an item and then press 📀 or 📒.

4 **Change the setting.**
- Rotate 📂, 📄, or 📅.
- The image can be enlarged/reduced by pinching out/pinching in the screen.

5 **Confirm the setting.**
- Press 📀 or 📒.
- The screen of Step 3 reappears.
  To set another item, repeat Steps 3 to 5.
6 Save the image.

- Press ▲▼ to select [Begin Processing] and then press ▼ or ✎.

[Image of a person using a device]

Displaying a Comparison Screen

You can change a setting while checking the effect by displaying images with the applied setting value side by side.

   - The image with the current setting (A) is displayed at the center.
   - Touching the image with the current setting enlarges it.
   - Touching [ ] returns to the original display.
   - A comparison screen cannot be displayed while [Noise Reduction] or [Sharpness] is selected.

2. Rotate , , or  to change the setting.
3. Press  or  to confirm the setting.

- RAW images recorded with the camera are recorded in the [L] size of [4:3].
  With this function, images are processed with the aspect ratio and the angle of view of [Ex. Tele Conv.] from the time of recording.
- The [White Balance] item is fixed to the setting from the time of recording for pictures recorded with multiple exposures.
- The results of RAW processing with this function and with the “SILKYPIX Developer Studio” software do not completely match.
12. Playing Back and Editing of Images – [Video Divide]

[Video Divide]

Divide a recorded video or 6K/4K burst file into two.

- Images cannot be returned to their original state once they have been divided. Carefully confirm the images before performing the divide operation.
- Do not remove the card or battery from the camera during the divide process. The images may be lost.

1. Select [Video Divide].

   ![Video Divide Menu]

2. Select and play the image.

   - Press \( \) to select an image and then press \( \) or \( \).
3 **Pause playback at the position you wish to divide.**

- Press ▲.
- To fine-adjust the position, press ◀▶ (frame-by-frame rewind or frame-by-frame forward).

4 **Divide the video.**

- Press ◀ or ◀▶.
- You can also divide the video by touching [Divide].

- Dividing the video at a point close to the start or end may not be possible.
- Videos with a short recording time cannot be divided.
- [Video Divide] cannot be used on images recorded using [Segmented File Recording].
13. Camera Customization

- Fn Buttons: 471
- [Dial Operation Switch]: 487
- Quick Menu Customization: 490
- Custom Mode: 498
- My Menu: 503
- [Save/Restore Camera Setting]: 505

This chapter describes the customization function with which you can configure the camera to your preferred settings.

**Change how buttons, dials, etc. on the camera are to be operated.**

- [Fn Button Set] (Fn Buttons: 471)

- [Dial Operation Switch Setup] ([Dial Operation Switch]: 487)

**Register the currently set information of the camera.**

- Custom mode ([Custom Mode: 498])
13. Camera Customization

**Change menu display items.**
- Quick menu (Quick Menu Customization: 490)
- My Menu (My Menu: 503)

**Import camera settings information onto another camera.**
- [Save/Restore Camera Setting] ([Save/Restore Camera Setting]: 505)

- Detailed settings for camera operations and screen display are available in the
  [Custom] menu. ([Custom] Menu: 548)
You can register functions to the Fn (Function) buttons. Additionally, you can register other functions to specialized buttons such as [WB] button, in the same way as with the Fn buttons. Different functions can be set for both during recording and playback.

13. Camera Customization – Fn Buttons

Register Functions to the Fn Buttons

1. **Select [Fn Button Set].**
   - Press [Fn] \[
   \rightarrow\] \[
   \rightarrow\] \[
   \rightarrow\] \[
   \rightarrow\]\[Fn Button Set\] \[
   \rightarrow\] \[
   \rightarrow\] \[
   \rightarrow\]\[Setting in REC mode]/
   \[Setting in PLAY mode]\n
2. **Select the button.**
   - Press \[\] to select the button and then press \[\] or \[\].
   - Selection is also possible by rotating \[\] or \[\].
   - Press [DISP.] to change the page.

• With default settings, [Fn8] to [Fn12] on the joystick cannot be used.
  When using functions, set the [Joystick Setting] in the [Custom] ([Operation]) menu to [Fn]. (⇒ [Joystick Setting]: 563)
13. Camera Customization  —  Fn Buttons

3 Find the function to register.
   • Rotate  to select the sub tab where the function to register is categorized (Setting Items ([Fn Button Set]/[Setting in REC mode]): 477, Setting Items ([Fn Button Set]/[Setting in PLAY mode]): 483) and then press  or .
   • You can also select by pressing  to select the sub tab, pressing  or rotating , and then pressing .
   • Each press of  switches between tabs [1] and [3].

4 Register the function.
   • Press  to select a function and then press  or .
   • Selection is also possible by rotating  or .
   • Select items with [>] by selecting the item again.
   • Depending on the button, some functions cannot be registered.
• You can also touch \[ \text{Fn} \] on the control panel (\( \Rightarrow \text{Recording Screen: 88} \)) to display the screen in Step 2.

• You can also press and hold the Fn button (2 sec.) to display the screen in Step 4.

(This may not be displayed depending on the registered function and on the button type.)
13. Camera Customization – Fn Buttons

[Others]
• [6K/4K Photo Play]
  – Displays the screen to select pictures to save from a 6K/4K burst file.
• [No Setting]
  – Set when not using as an Fn button.
• [Off (Disable Press and Hold)]
  – The button does not work as an Fn button. The function registering screen is not displayed when you press and hold (2 seconds) the Fn button.
• [Restore to Default]
  – Restore the default settings for the Fn button. (Fn Button Default Settings: 472)
Use the Fn Buttons

During recording, pressing the Fn buttons enables usage of the functions registered in [Setting in REC mode], and during playback, it enables usage of the functions registered in [Setting in PLAY mode].

1. Press the Fn button.
2. Select a setting item.
   - Press ◀ to select a setting item and then press ● or ●.
   - Selection is also possible by rotating ●, ● or ●.
   - Display and selection methods of a setting item differ depending on the menu item.
13. Camera Customization – Fn Buttons

❖ Use [Fn3] to [Fn7] (Touch Icons)
During recording, you can use the Fn buttons within the Touch Tab.

- With the default settings, the Touch Tab is not displayed. Set [Touch Tab] to [ON] in [Touch Settings] in the [Custom] ([Operation]) menu. (☞[Touch Settings]: 559)

1. Touch [fn].
2. Touch one of [Fn3] to [Fn7].
[Dial Operation Switch]

- Register Functions to the Dials: 487
- Temporarily Change Dial Operation: 489

This temporarily changes the functions operated with  (front dial) and  (rear dial).

Register Functions to the Dials

Register functions to each of  and  .

1 **Select [Dial Operation Switch Setup].**
   -  ➤ [ ] ➤ [ ] ➤ [Dial Set.] ➤ [Dial Operation Switch Setup]
   -  ➤ [ ] ➤ [ ]

2 **Register the function.**
   - Press ▲▼ to select a function and then press  or .
Functions That Can Be Registered

- [Exposure Comp.] (Exposure Compensation: 269)
- [Sensitivity]*1 (ISO Sensitivity: 273)
- [White Balance]*2 (White Balance (WB): 278)
- [Photo Style] (Photo Style: 285)
- [Aspect Ratio] (Aspect Ratio: 114)
- [i.Dynamic Range] (i.Dynamic Range: 520)
- [Filter Effect] (Filter Settings: 293)
- [AF Mode] (Selecting the AF Mode: 135)

Custom Mode

- Register in Custom Mode: 498
- Using Custom Mode: 501
- Calling Up Settings: 502

Recording modes and menu settings that match your preferences can be registered in Custom mode. You can use registered settings by switching the mode dial to [C1] to [C4] modes.

Register in Custom Mode

You can register the currently set information of the camera. At the time of purchase, the default settings of the [P] mode menus are registered with all Custom modes.

1. Set menu settings of the state you wish to save.
2. Select [Save to Custom Mode].
   - [ ] → [ ] → [ ] → [Save to Custom Mode]
3 Register.

- Select the save-to number and then press \( \text{or} \) \( \) .
- A confirmation screen will be displayed. Press [DISP.] to change the Custom mode name.

How to enter characters (Entering Characters: 609)

You cannot register [IA] mode in Custom mode.

List of settings that can be registered in Custom mode (List of Default Settings/Custom Saving/Settings Available for Copying: 771)
13. Camera Customization – Custom Mode

**Custom Mode Detailed Settings**
You can create additional Custom mode sets, and how long to retain temporarily changed settings details.

![Custom Mode Settings]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Limit No. of Custom Mode]</td>
<td>Sets the number of Custom modes that can be registered in [C4]. A maximum of 10 sets can be registered; 3 sets are available as default settings.</td>
</tr>
<tr>

</tbody>
</table>
13. Camera Customization – Custom Mode

Using Custom Mode

1 Set the mode dial to one of [C1] to [C4].
   - If [C4], the last-used Custom mode will be called up.

[C4] Custom Mode Selection

1 Set the mode dial to [C4].
2 Press .
3 Press ▲▼ to select the Custom mode and then press or .
   - The selected Custom mode icon will be displayed on the recording screen.

Changing Registered Details

Registered settings do not change even if you change the camera settings temporarily with the mode dial set to [C1] to [C4].
To change the registered details, overwrite them by using [Save to Custom Mode] in the [Setup] ([Setting]) menu.
13. Camera Customization – Custom Mode

Calling Up Settings

Call up registered Custom mode settings to the selected recording mode and overwrite the current settings with the called up settings.

1. Set to the mode dial to use.
2. Select [Load Custom Mode].
   - Set to [ ]
   - Select [Load Custom Mode]

3. Select the Custom mode to call up.
   - Select the Custom mode and then press or .

- Calling up of Custom modes is not possible between those created from [P]/[A]/[S]/[M] modes and those created from [ ] mode.
My Menu

- Registration in My Menu: 503
- Edit My Menu: 504

Register frequently-used menus in My Menu.
A maximum of 23 items can be registered.
Registered menus can be called up from [1] to [3].

Registration in My Menu

1 Select [Add].

   - Menu ⇒ [ ] ⇒ [ ] ⇒ [Add]

2 Register.

   - Select the menu to register and then press or .
Calling up My Menu

Call up the menus registered in My Menu.

Registered menus

Edit My Menu

You can reorder the display order of My Menu, and delete unnecessary menus.

Select [ ]

13. Camera Customization – [Save/Restore Camera Setting]

**[Save/Restore Camera Setting]**

Saves the camera's settings information to the card. Saved settings information can be loaded to the camera, letting you set the same settings on multiple cameras.

### Select [Save/Restore Camera Setting]

| **Save** | Saves the camera’s settings information to the card.  
| | • If saving new data, then select [New File], and if overwriting an existing file, select that existing file.  
| | • When [New File] is selected, a screen to select the file name to save as is displayed.  
| | [OK]: Saves using the file name on the screen.  
| | [Change the file name]: Changes the file name and saves the file.  
| | • Available characters: alphabetic characters (upper-case), numerals, up to 8 characters  
| | • How to enter characters (Entering Characters: 609) |
| **Load** | Loads the settings information on the card and copies it to the camera. |
| **Delete** | Deletes settings information on the card. |
| **Keep Settings While Format** | When formatting the card, formats the card while keeping camera settings information stored on the card. |
• Only settings information from the same model can be loaded.
• Up to 10 instances of settings information can be saved on one card.
• List of functions for which saving of settings information is possible (List of Default Settings/Custom Saving/Settings Available for Copying: 771)
14. Menu Guide

Menu items common to the [Photo] menu and [Video] menu. Their settings are synchronized.

[Photo] menu ([Image Quality])

- Default settings

### [Photo Style]

You can select the finishing settings of images to suit your subjects and expression styles.

([Photo Style]: 285)

### [Metering Mode]

- Type of optical measurement to measure brightness can be changed.

([Metering Mode]: 252)
### Aspect Ratio

- [4:3]/[3:2]/[16:9]/[1:1]

You can select the image aspect ratio.

(⇒ [Aspect Ratio]: 114)

### Picture Quality

- [FINE]/[STD.]/[RAW FINE]/[RAW STD.]/[RAW]

Set the compression rate used for storing pictures.

(⇒ [Picture Quality]: 116)

### Picture Size

- [L]/[M]/[S]

Sets the picture’s image size.

(⇒ [Picture Size]: 115)

### Long Exposure NR

- [ON]/[OFF]

The camera automatically removes noise generated when recording images with a slow shutter speed.

- Recording is not possible during noise reduction.
- When the following functions are being used, [Long Exposure NR] is not available:
  - Video recording/[6K/4K PHOTO]/[Post-Focus]
  - [ELEC.] (Excluding [ELEC.+NR])/[Silent Mode]
[ISO Sensitivity (photo)]

| ISO Auto Lower Limit Setting | [200] to [12800] |
| ISO Auto Upper Limit Setting | [AUTO]/[400] to [25600] |

Sets the lower and upper limits for ISO sensitivity when ISO sensitivity is set to [AUTO].

[Min. Shutter Speed]

| AUTO | [1/16000] to [1/1] |

Sets the minimum shutter speed when the ISO sensitivity is set to [AUTO].

- The shutter speed may become slower than the set value in recording situations where correct exposure cannot be achieved.

[i.Dynamic Range]

| AUTO | [HIGH]/[STANDARD]/[LOW]/[OFF] |

Contrast and exposure are compensated when the brightness difference between the background and subject is great.

- Compensation effect may not be achieved depending on the recording conditions.
- When the following functions are being used, [i.Dynamic Range] is not available:
  - [Like709]/[V-Log L]/[Hybrid Log Gamma] (Photo Style)
  - [Filter Settings]
[Vignetting Comp.] [ON]/[OFF]

When the screen periphery darkens as a result of the lens characteristics, you can record pictures with the brightness of the screen periphery corrected.

• Compensation effect may not be achieved depending on the recording conditions.
• Noise in the periphery of the picture may stand out with higher ISO sensitivity.
• When the following function is being used, [Vignetting Comp.] is not available:
  – [Ex. Tele Conv.]
  – [PIXEL/PIXEL] ([Image Area of Video])
  – [Variable Frame Rate]

[Diffraction Compensation] [AUTO]/[OFF]

The camera raises the image resolution by correcting the blurriness caused by diffraction when the aperture is closed.

• Compensation effect may not be achieved depending on the recording conditions.
• Noise may stand out with higher ISO sensitivity.
This mode records with additional image effects (filters).

( [Filter Settings]: 293)
[Photo] menu (Focus)

▶ Default settings

[AF Custom Setting(Photo)]

[Set 1]/[Set 2]/[Set 3]/[Set 4]
Select features of AF operation when recording using [AFC] that are appropriate for
the subject and scene.

(▶[AF Custom Setting(Photo)]: 132)

[AF Assist Light] 

[ON]/[OFF]
When recording in low light conditions, the AF assist light turns on when you press
the shutter button halfway, making it easier for the camera to focus.
• The effective range of the AF assist light is different depending on the lens used.
  – When the interchangeable lens (H-ES12060) is attached and at wide-angle end.
    Approx. 1.0 m (3.3 feet) to 3.5 m (11 feet)
  – When the interchangeable lens (H-FS12060) is attached and at wide-angle end.
    Approx. 1.0 m (3.3 feet) to 3.0 m (9.8 feet)
• Remove the lens hood.
• The AF assist light may be greatly blocked, and it may become harder to focus
  when a lens with large diameter is used.
[Focus Peaking]  

[ON]/[OFF]

[SET]

[Focus Peaking Sensitivity]

[Display Color]

[Display During AFS]

During MF operation, in-focus portions (portions on the screen with clear outlines) are highlighted with color.

• If the [Focus Peaking Sensitivity] is adjusted to the negative direction, portions to be highlighted are reduced, allowing you to achieve a more precise focus.
• With [Display Color], you can set the display color of the in-focus portion.
• When [Display During AFS] is set to [ON], the Focus Peaking display is also possible when the shutter button is pressed halfway in the [AFS] focus mode.
• You can display the Touch Tab (+[Touch Settings]: 559) and then touch [FAST] in [ ] to switch [ON]/[OFF].
• When [Rough Monochrome] of [Filter Settings] is being used, [Focus Peaking] is not available.
• When [Live View Boost] is being used, [Focus Peaking] is not available.

[1-Area AF Moving Speed]  

[FAST]/[NORMAL]

[FAST]

Sets the speed when moving a single AF area.

<td>Lens1 to Lens12</td>
</tr>
</tbody>
</table>

Configures image stabilizer settings. ([Image Stabilizer: 243])
[Burst Rate]

[H]/[M]/[L]
Sets the burst recording operation.
(⇒ Taking Burst Pictures: 184)

[Shutter Type]

[AUTO]/[MECH.]/[EFC]/[ELEC.]/[ELEC.+NR]
Selects the shutter type to use for taking pictures.
(⇒ [Shutter Type]: 240)

[Shutter Delay]

[8SEC]/[4SEC]/[2SEC]/[1SEC]/[OFF]

To reduce camera shake and shutter-induced blur, the shutter is released after the specified time has passed since the shutter button was pressed.
• When the following functions are being used, [Shutter Delay] is not available:
  – Video recording/[6K/4K PHOTO]/[Post-Focus]
### [Ex. Tele Conv.]

**[ZOOM][TELE CONV.][OFF]**

You can take pictures that are further enlarged beyond what is available with the optical zoom, without any deterioration in image quality.

(➔ **Extended Tele Conversion: 176**)

### [Time Lapse/Animation]

**[Mode]**

- **[Time Lapse Shot]**
- **[Stop Motion Animation]**

Time Lapse Shot automatically starts/stops recording at a set recording interval. Stop Motion Animation enables you to take pictures while moving the subject little by little.

(➔ **Recording with Time Lapse Shot: 216, Recording with Stop Motion Animation: 221**)

### [Self Timer]

**etc. (Custom)**

- **[SET]**
- **[Custom Time]**
- **[Display Countdown]**

Sets the self-timer duration.

(➔ **Recording Using the Self-timer: 227**)

### [6K/4K PHOTO]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Picture Size / Burst Speed</td>
<td>[6K 18M]/[4K H 8M]/[4K 8M]</td>
</tr>
<tr>
<td>Rec Method</td>
<td>[6K/4K Burst]/[6K/4K Burst(S/S)]/[6K/4K Pre-Burst]</td>
</tr>
<tr>
<td>Pre-Burst Recording</td>
<td>[ON]/[OFF]</td>
</tr>
</tbody>
</table>

Sets 6K/4K photos. You can save pictures extracted from a burst file taken using high-speed burst.  
(➔ 6K/4K Photo Recording: 190)

### [Post-Focus]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>[6K 18M]/[4K 8M]</td>
<td>Taking burst pictures with the same image quality as 6K/4K photos while automatically changing the focus point. You can select the focus point for the picture to save after recording. (➔ Post-Focus Recording: 207)</td>
</tr>
</tbody>
</table>

### [Multiple Exposure]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Start</td>
<td>[ON]/[OFF]</td>
</tr>
<tr>
<td>Auto Gain</td>
<td>[ON]/[OFF]</td>
</tr>
<tr>
<td>Overlay</td>
<td>[ON]/[OFF]</td>
</tr>
</tbody>
</table>

You can apply an effect equivalent to four exposures on a single image.  
[Start]: Starts exposure for multiple exposures.  
[Auto Gain]: Automatically adjusts brightness in accordance with image count.  
[Overlay]: Allows multiple exposure for recorded RAW images. After selecting [Start], a selection screen for images to stack is displayed.
• After selecting [Start], pressing the shutter button fully starts multiple exposure.

• Preview is displayed for each recording, and the following operations are available:

  – [Next] (You can also perform the same operation by pressing the shutter button halfway.)
  – [Retake]
  – [Exit]: Records the picture, and finishes multiple exposure recording.

• To finish multiple exposure recording before starting the recording, press [Q] on the recording screen.

• Recording information for the last-recorded image will be saved as recording information for images recorded with multiple exposures.

• [Overlay] can be set only for RAW images recorded with the camera.

• When the following functions are being used, [Multiple Exposure] is not available:
  – [Time Lapse Shot]
  – [Stop Motion Animation]
  – [Filter Settings]
  – HDMI output
**[Time Stamp Rec.]**

**[ON]/[OFF]**

Records the recorded date and time superimposed on the images.

- You cannot delete recording dates after superimposing them.
- The recorded date and time are not recorded in 6K/4K burst files or RAW images.
- When the following functions are being used, [Time Stamp Rec.] is not available:
  - [Post-Focus]
  - 6K/4K Anamorphic (4:3) video
  - [Variable Frame Rate]
[Video] Menu

- [Video] menu ([Image Quality]): 534
- [Video] menu ([Image Format]): 538
- [Video] menu ([Focus]): 540
- [Video] menu ([Audio]): 542
- [Video] menu ([Others (Video))]: 545

[Video] menu ([Image Quality]): Menu items common to the [Photo] menu and [Video] menu. Their settings are synchronized.

### [Video] menu ([Image Quality])

- Default settings

#### [Exposure Mode]

- [P]/[A]/[S]/[M]

  Sets the exposure mode to use in [P] mode.  
  (Creative Video Mode: 330)

#### [Photo Style]

You can select the finishing settings of images to suit your subjects and expression styles.  
(Phot Style: 285)

**[Metering Mode]**

Type of optical measurement to measure brightness can be changed.

(⇒ [Metering Mode]: 252)

**ISO Sensitivity (video)**

<table>
<thead>
<tr>
<th>[ISO Auto Lower Limit Setting]</th>
<th>[200] to [6400]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ISO Auto Upper Limit Setting]</td>
<td>[AUTO]/[400] to [12800]</td>
</tr>
</tbody>
</table>

Sets the lower and upper limits for ISO sensitivity when ISO sensitivity is set to [AUTO].

(⇒ [ISO Sensitivity (video)]: 362)

**[Synchro Scan]**

[ON]/[OFF]

Fine-adjust the shutter speed to reduce flickering and horizontal stripes.

(⇒ [Synchro Scan]: 410)

**[Flicker Decrease (Video)]**

[1/50]/[1/60]/[1/100]/[1/120]/[OFF]

The shutter speed can be fixed to reduce the flicker or striping in the video.

• This can be set when [Auto Exposure in P/A/S/M] is [ON].
### [Master Pedestal Level]

[−15] to [15] (0)

You can adjust the black level, which serves as the reference for images.

(⇒ [Master Pedestal Level]: 358)

### [SS/Gain Operation]

[SEC/ISO]/[ANGLE/ISO]/[SEC/dB]

You can switch the units of shutter speed values and gain (sensitivity) values.

(⇒ [SS/Gain Operation]: 370)

### [i.Dynamic Range]

[AUTO]/[HIGH]/[STANDARD]/[LOW]/[OFF]

Contrast and exposure are compensated when the brightness difference between the background and subject is great.

(⇒ [i.Dynamic Range]: 520)

### [Vignetting Comp.]

[ON]/[OFF]

When the screen periphery darkens as a result of the lens characteristics, you can record pictures with the brightness of the screen periphery corrected.

(⇒ [Vignetting Comp.]: 521)
[Diffraction Compensation] (Auto) / (Off)

The camera raises the image resolution by correcting the blurriness caused by diffraction when the aperture is closed.

(➡ [Diffraction Compensation]: 521)

[Filter Settings] (On) / (Off) / (Set)

This mode records with additional image effects (filters).

(➡ [Filter Settings]: 293)
[Video] menu ([Image Format])

▶ Default settings

[Rec. File Format]

- [MP4]/[MOV]
  Sets the video recording file format.
  (⇒ [Rec. File Format]: 337)

[Image Area of Video]

- [FULL]/[PIXEL/PIXEL]
  Sets the image area during video recording.
  (⇒ [Image Area of Video]: 348)

[Rec Quality]

Sets the video recording image quality.
(⇒ [Rec Quality]: 338)

[Rec Quality (My List)]

Calls up a recording quality registered in My List.
(⇒ [add to list]: 346)

[Variable Frame Rate]

- [ON]/[OFF]
  Varies the recording frame rate to record slow motion video and fast motion video.
  (⇒ [Variable Frame Rate]: 382)
### [Time Code]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time Code Display</td>
<td>ON/OFF</td>
</tr>
<tr>
<td>Count Up</td>
<td>REC RUN/FREE RUN</td>
</tr>
<tr>
<td>Time Code Value</td>
<td>Reset</td>
</tr>
<tr>
<td>Time Code Mode</td>
<td>DF/NDF</td>
</tr>
<tr>
<td>HDMI Time Code Output</td>
<td>ON/OFF</td>
</tr>
</tbody>
</table>

Sets the recording, display, and output of the time code.

(➡️ Time Code: 350)

### [Luminance Level]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>[0-255]/[16-235]/[16-255]</td>
<td></td>
</tr>
</tbody>
</table>

You can set the luminance range to suit the purpose of video recording.

(➡️ Luminance Level: 357)
[Video] menu ([Focus])

▷ Default settings

[AF Custom Setting(Video)]

<table>
<thead>
<tr>
<th>ON/OFF</th>
<th>AF Speed/AF Sensitivity</th>
</tr>
</thead>
</table>

You can fine-adjust the focusing method for video recording using Continuous AF.

([AF Custom Setting(Video): 355])

[Continuous AF]

| MODE1/MODE2/OFF |

You can select how to set the focus in AF when recording videos.

([Continuous AF]: 354)

[AF Assist Light]

| ON/OFF |

When recording in low light conditions, the AF assist light turns on when you press the shutter button halfway, making it easier for the camera to focus.

([AF Assist Light]: 523)

### [Focus Peaking]  

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
<th>[Set]</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>[Focus Peaking Sensitivity]</td>
</tr>
<tr>
<td></td>
<td>[Display Color]</td>
</tr>
<tr>
<td></td>
<td>[Display During AFS]</td>
</tr>
</tbody>
</table>

During MF operation, in-focus portions (portions on the screen with clear outlines) are highlighted with color.

(➔[Focus Peaking]: 524)

### [1-Area AF Moving Speed]  

<table>
<thead>
<tr>
<th>[FAST]/[NORMAL]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sets the speed when moving a single AF area.</td>
</tr>
</tbody>
</table>

(➔[1-Area AF Moving Speed]: 524)
### [Video] menu ([Audio])

</tr>
</tbody>
</table>
### [Sound Rec Level Limiter]

<table>
<thead>
<tr>
<th>[ON]</th>
<th>[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>The sound recording level is adjusted automatically to minimize sound distortion (crackling noise).</td>
<td></td>
</tr>
</tbody>
</table>

(⇒ [Sound Rec Level Limiter]: 366)

### [Wind Noise Canceller]

<table>
<thead>
<tr>
<th>[HIGH]</th>
<th>[STANDARD]</th>
<th>[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>This reduces the wind noise coming into the built-in microphone while maintaining sound quality.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(⇒ [Wind Noise Canceller]: 367)

### [Wind Cut]

<table>
<thead>
<tr>
<th>[HIGH]</th>
<th>[STANDARD]</th>
<th>[LOW]</th>
<th>[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>This reduces wind noise when an external microphone is connected.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(⇒ Reduction of Wind Noise: 438)

### [Lens Noise Cut]

<table>
<thead>
<tr>
<th>[ON]</th>
<th>[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>You can reduce the zoom sound produced during video recording when you are using interchangeable lens compatible with power zoom.</td>
<td></td>
</tr>
</tbody>
</table>

(⇒ [Lens Noise Cut]: 368)

### [Special Mic.]

<table>
<thead>
<tr>
<th>[STEREO]</th>
<th>[LENS AUTO]</th>
<th>[SHOTGUN]</th>
<th>[S.SHOTGUN]</th>
<th>[MANUAL]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sets the sound pickup range when using the Stereo Shotgun Microphone (DMW-MS2: optional).</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(⇒ Setting the Sound Pickup Range (DMW-MS2: Optional): 437)
[XLR Mic Adaptor Setting]

<table>
<thead>
<tr>
<th>[96kHz/24bit]</th>
<th>[48kHz/24bit]</th>
<th>[48kHz/16bit]</th>
<th>[OFF]</th>
</tr>
</thead>
</table>

Sets the audio input for when an XLR Microphone Adaptor (DMW-XLR1: optional) is attached.

(⇒ XLR Microphone Adaptor (Optional): 439)

[Sound Output]

[REALTIME] | [REC SOUND]

Sets the audio output method when headphones are connected.

(⇒ Switching the Sound Output Method: 442)

[Headphone Volume]

<table>
<thead>
<tr>
<th>[0] to [LEVEL15]</th>
<th>[LEVEL3]</th>
</tr>
</thead>
</table>

Adjusts the volume when headphones are connected.

(⇒ Adjusting the Headphone Volume: 442)
### [Video] menu ([Others (Video)])

- **Default settings**

#### [Silent Mode]

- [ON] ➔ [OFF]
- Disables all operation sounds and light output at once.
  - ([Silent Mode]: 239)

#### [Image Stabilizer]

<table>
<thead>
<tr>
<th>Setting</th>
<th>ON/OFF</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Operation Mode]</td>
<td>[ON]</td>
</tr>
<tr>
<td>[E-Stabilization (Video)]</td>
<td>[ON]</td>
</tr>
<tr>
<td>[Boost I.S. (Video)]</td>
<td>[ON]</td>
</tr>
<tr>
<td>[Anamorphic (Video)]</td>
<td>[OFF]</td>
</tr>
<tr>
<td>[Lens Information]</td>
<td>[Lens1] to [Lens12]</td>
</tr>
</tbody>
</table>
- Configures image stabilizer settings.
  - ([Image Stabilizer]: 243)

#### [Self Timer Setting]

<table>
<thead>
<tr>
<th>Setting</th>
<th>[SET]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Self Timer]</td>
<td>[OFF]</td>
</tr>
<tr>
<td>[Self Timer For Video]</td>
<td>[OFF]</td>
</tr>
</tbody>
</table>
- Sets the self-timer duration.
  - ([Setting the Self-timer Time]: 229)
### [Focus Transition]

<table>
<thead>
<tr>
<th>[Start]</th>
<th>[1]/[2]/[3]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Focus Pull Setting]</td>
<td>[SH]/[H]/[M]/[L]/[SL]</td>
</tr>
<tr>
<td>[Focus Transition Speed]</td>
<td>[1]/[2]/[3]/[OFF]</td>
</tr>
<tr>
<td>[Focus Transition Rec]</td>
<td>[10SEC]/[5SEC]/[OFF]</td>
</tr>
<tr>
<td>[Focus Transition Wait]</td>
<td>[OFF]</td>
</tr>
</tbody>
</table>

Smoothly transitions the focus position from the current position to a position registered in advance.

(⇒ [Focus Transition]: 386)

### [Loop Recording (video)]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
</tr>
</thead>
</table>

When the recording fills the card to capacity, recording continues while deleting older data.

(⇒ [Loop Recording (video)]: 412)

### [Segmented File Recording]

<table>
<thead>
<tr>
<th>[10MIN.]/[5MIN.]/[3MIN.]/[1MIN.]/[OFF]</th>
</tr>
</thead>
</table>

Video is divided every few minutes while being recorded.

(⇒ [Segmented File Recording]: 414)
### [Live Cropping]

<table>
<thead>
<tr>
<th>40SEC</th>
<th>20SEC</th>
<th>OFF</th>
</tr>
</thead>
</table>

By cropping a part of the range displayed in the live view, it is possible to record FHD video that incorporates panning and zooming with the camera staying in a fixed position.

(➔[Live Cropping]: 390)

### [Time Stamp Rec.]

<table>
<thead>
<tr>
<th>ON</th>
<th>OFF</th>
</tr>
</thead>
</table>

Records the recorded date and time superimposed on the images.

(➔[Time Stamp Rec.]: 533)

[Custom] Menu

- [Custom] menu ([Image Quality]): 549
- [Custom] menu ([Focus/Shutter]): 553
- [Custom] menu ([Operation]): 559
- [Custom] menu ([Monitor / Display (Photo))]: 564
- [Custom] menu ([Monitor / Display (Video))]: 575
- [Custom] menu ([IN/OUT]): 579
- [Custom] menu ([Lens / Others]): 580
### [Custom] menu ([Image Quality])

- **Default settings**

#### [Photo Style Settings]

<table>
<thead>
<tr>
<th>Show/Hide Photo Style</th>
<th>[Vivid]/[Natural]/[L.ClassicNeo]/[Flat]/[Landscape]/[Portrait]/[L.Monochrome]/[L.Monochrome D]/[L.Monochrome S]/[Cinelike D2]/[Cinelike V2]/[Like709]/[V-Log L]/[Hybrid Log Gamma]/[MY PHOTO STYLE 1] to [MY PHOTO STYLE 10]</th>
</tr>
</thead>
</table>

Sets Photo Style items to be displayed on the menu.

- **My Photo Style Settings**

- **Load Preset Setting**: Sets the timing at which image quality adjustment values changed in My Photo Style are returned to their registered state.

- **Reset Photo Style**: Returns details changed in [Photo Style] and [Photo Style Settings] to their default settings.

#### [ISO Increments]

<table>
<thead>
<tr>
<th>1/3 EV</th>
<th>1 EV</th>
</tr>
</thead>
</table>

Changes the intervals between ISO sensitivity adjustment values.
[Extended ISO]

[ON]/[OFF]

Setting of ISO sensitivity to a minimum of [ISO100] is possible.

[Exposure Offset Adjust.]

<table>
<thead>
<tr>
<th>[Multi Metering]</th>
<th>[Center Weighted]</th>
<th>[Spot]</th>
<th>[Highlight Weighted]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[−1EV] to [+1EV]</td>
<td>[−1EV] to [+1EV]</td>
<td>[−1EV] to [+1EV]</td>
<td>[−1EV] to [+1EV]</td>
</tr>
</tbody>
</table>

Adjusts the exposure level that is the standard exposure for each item of [Metering Mode]. Adds the adjustment value from this function to the exposure compensation value (Exposure Compensation: 269) when recording.

• For video recording, [6K/4K PHOTO], and [Post-Focus], it is not possible to add an adjustment value of a range that exceeds ±3 EV.
[Color Space]

<table>
<thead>
<tr>
<th>sRGB</th>
<th>AdobeRGB</th>
</tr>
</thead>
</table>

This sets the method for correcting the color reproduction of the recorded images on the screens of a PC or on a device such as a printer.

**sRGB**: This is widely used in PCs and similar devices.

**AdobeRGB**: AdobeRGB is mainly used for business purposes such as professional printing because it has a greater range of reproducible colors than sRGB.

- Set to [sRGB] if you are not very familiar with AdobeRGB.
- When the following functions are being used, the setting is fixed to [sRGB]:
  - Video recording/[6K/4K PHOTO]/[Post-Focus]
  - [Like709]/[V-Log L] ([Photo Style])
  - [Filter Settings]

[Exposure Comp. Reset]

| ON | OFF |

This resets the exposure value when you change the recording mode or turn off the camera.

[Auto Exposure in P/A/S/M]

| ON | OFF |

Selects the setting method for aperture value, shutter speed, and ISO sensitivity for the video being recorded in the [P]/[A]/[S]/[M] modes.

**ON**: Records with values set automatically by the camera.

**OFF**: Records with manually set values.

**[CreativeVideo Combined Set.]**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Icon</th>
</tr>
</thead>
<tbody>
<tr>
<td>[F/SS/ISO/Exposure Comp.]</td>
<td>![icon]</td>
</tr>

<td>[White Balance]</td>
<td>![icon]</td>
</tr>
<tr>
<td>[Photo Style]</td>
<td>![icon]</td>
</tr>
<tr>
<td>[Metering Mode]</td>
<td>![icon]</td>
</tr>
<tr>
<td>[AF Mode]</td>
<td>![icon]</td>
</tr>
</tbody>
</table>

Content set in [C] mode can be separated from when taking pictures.

(➡Separating Settings for Recording Video and Pictures; 334)
### [Custom] menu (Focus/Shutter)

- Default settings

#### [Focus/Shutter Priority]

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AFS</strong></td>
<td><img src="FOCUS" alt="FOCUS" /> <img src="BALANCE" alt="BALANCE" /> <img src="RELEASE" alt="RELEASE" /></td>
<td></td>
</tr>
<tr>
<td><strong>AFC</strong></td>
<td><img src="FOCUS" alt="FOCUS" /> <img src="BALANCE" alt="BALANCE" /> <img src="RELEASE" alt="RELEASE" /></td>
<td></td>
</tr>
</tbody>
</table>

This sets whether to give priority to focus or shutter release during AF.  
**FOCUS**: Disables recording when focus is not achieved.  
**BALANCE**: Performs recording while controlling the balance between focusing and shutter release timing.  
**RELEASE**: Enables recording even when focus is not achieved.

#### [Focus Switching for Vert / Hor]

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ON</strong></td>
<td><strong>OFF</strong></td>
</tr>
</tbody>
</table>

This stores separate AF area positions (MF positions for MF Assist) for when the camera is held vertically and when it is held horizontally.  
(⇒ [Focus Switching for Vert / Hor]: 166)

#### [AF/AE Lock Hold]

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ON</strong></td>
<td><strong>OFF</strong></td>
</tr>
</tbody>
</table>

This sets button operations for AF/AE Lock.  
Turning this [ON] maintains the lock after releasing the button until it is pressed again.

### [AF+MF]

<table>
<thead>
<tr>
<th>ON/OFF</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

When the focus mode is set to [AFS], you can fine-adjust the focus manually during AF lock.

- When the shutter button is pressed halfway
- When [AF ON] is pressed
- When locked using the Fn button [AF LOCK] or [AF/AE LOCK]

### [MF Assist]

<table>
<thead>
<tr>
<th>ON/OFF</th>
<th>ON/OFF</th>
<th>ON/OFF</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- When an interchangeable lens with a focus ring is attached
  - [Focus Ring]: The screen is enlarged by focusing with the lens.
  - [AF Mode]: The screen is enlarged by pressing [FZ].
  - [Press Joystick]: Press the joystick to enlarge the display. (if [Joystick Setting] is set to [D. FOCUS Movement]) (†[Joystick Setting]: 563)
  - [MF Assist Display]: Sets the display method (full screen mode/windowed mode) of MF Assist (enlarged screen).
    - While you are using the following functions, MF Assist will not be displayed:
      - Video recording
      - [6K/4K Pre-Burst]
### [MF Guide]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Default/Custom</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>(OFF)</td>
<td>(OFF)</td>
<td>Default setting specifications vary depending on the country or area where the camera was purchased.</td>
</tr>
<tr>
<td>* During MF, MF Guide, which acts as a guide to recording distance, is displayed on the screen. You can select from meters or feet for the display unit. * The distance index of the [MF Guide] depends on the lens and zoom position. If the lens does not support the display of the distance index, only the scale is displayed on the MF guide.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### [Focus Ring Lock]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Default/Custom</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>(OFF)</td>
<td>(OFF)</td>
<td>This disables the focus ring operation during MF to lock the focus. [MFL] is displayed on the recording screen while the focus ring is locked.</td>
</tr>
</tbody>
</table>

### [Show/Hide AF Mode]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Default/Custom</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Human/Animal Detect AF]</td>
<td>[ON]/(OFF)</td>
<td>Sets the AF mode items to be displayed on the AF mode selection screen.</td>
</tr>
<tr>
<td>[Tracking]</td>
<td>[ON]/(OFF)</td>
<td></td>
</tr>
<tr>
<td>[225-Area]</td>
<td>[ON]/(OFF)</td>

<tr>
<td>[Custom3]</td>
<td>[ON]/(OFF)</td>
<td></td>
</tr>
</tbody>
</table>
[Pinpoint AF Setting]

- **[Pinpoint AF Time]**
  - LONG
  - MID
  - SHORT

- **[Pinpoint AF Display]**
  - FULL
  - PIP

Changes enlarged screen settings displayed when AF mode is [ ].

- **[Pinpoint AF Time]**: Sets the time for which the screen is enlarged when the shutter button is pressed halfway.
- **[Pinpoint AF Display]**: Sets the display method (full screen mode/windowed mode) of the enlarged screen.

[AF-Point Scope Setting]

- **[Keep Enlarged Display]**
  - ON
  - OFF

- **[PIP Display]**
  - FULL
  - PIP

Changes the enlarged screen settings of AF-Point Scope (⇒ Magnify the AF Area Position ([AF-Point Scope]): 131).

- **[Keep Enlarged Display]**: Setting this to [ON] maintains the enlarged screen after pressing the Fn button until it is pressed again.
- **[PIP Display]**: Sets the display method (full screen mode/windowed mode) of the enlarged screen.

[Shutter AF]

- **ON**
  - OFF

This adjusts focus automatically when you press the shutter button halfway.

[Half-Press Shutter]

- **ON**
  - OFF

You can release the shutter quickly by pressing the shutter button halfway.
[Assign REC to Shutter Button]

**[ON]/[OFF]**

Use the shutter button for the start/stop operation of video recording in the [M] mode.
The start/stop operation of video recording using the shutter button can be disabled when set to [OFF].

[Quick AF]

**[ON]/[OFF]**

When the amount of camera shake becomes small, the camera will automatically adjust the focus and focus adjustment will then be quicker when the shutter button is pressed.
- The battery will drain faster than usual.
- This function is not available in the following cases:
  - In preview mode
  - In low light situations

[Eye Sensor AF]

**[ON]/[OFF]**

When looking through the viewfinder, if the eye sensor operates, then AF will function.
- [Eye Sensor AF] may not work in low light situations.

[Looped Focus Frame]

**[ON]/[OFF]**

When moving the AF area or MF Assist, this enables its position to loop from one edge to the other edge of the screen.
When the focus mode is set to [AFC] in the [ ] AF mode, you can specify which area to start [AFC].

(➔[225-Area]: 145)

<table>
<thead>
<tr>
<th>[AFC Start Point (225-Area)]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ON]/[OFF]</td>
</tr>
</tbody>
</table>

When the focus mode is set to [AFC] in the [ ] AF mode, you can specify which area to start [AFC].

(➔[225-Area]: 145)
### [Custom] menu ([Operation])

- Default settings

#### [Q.MENU Settings]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>

</tbody>
</table>

Customizes the Quick menu.
((Quick Menu Detailed Settings: 497)

#### [Touch Settings]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Touch Screen]</td>
<td>[ON]/[OFF]</td>
</tr>
<tr>
<td>[Touch Tab]</td>
<td>[ON]/[OFF]</td>
</tr>
<tr>
<td>[Touch AF]</td>
<td>[AF]/[AF+AE]</td>
</tr>
<tr>
<td>[Touch Pad AF]</td>
<td>[EXACT]/[OFFSET1] to [OFFSET7]/[OFF]</td>
</tr>
</tbody>
</table>

Enables touch operation on the monitor display.

- **[Touch Screen]**: All touch operations.
- **[Touch Tab]**: Operations of tabs, such as [ ] on the right side of the screen.
- **[Touch AF]**: Operation to optimize the focus ([AF]) for a touched subject. Alternatively, operation to optimize both the focus and brightness ([AF+AE]).
  ([Moving the AF Area by Touch: 161])
- **[Touch Pad AF]**: Touch pad operation during viewfinder display. ([Moving the AF Area Position with the Touch Pad: 163])

560
[WB/ISO/Expo. Button]

<table>
<thead>
<tr>
<th>[WHILE PRESSING]</th>
<th>[AFTER PRESSING1]</th>
<th>[AFTER PRESSING2]</th>
</tr>
</thead>
</table>

This sets the operation to be performed when [WB] (White balance), [ISO] (ISO sensitivity) or [ ] (Exposure compensation) is pressed.

[WHILE PRESSING]: Allows you to change the setting while pressing and holding the button. Release the button to confirm the settings value, and to return to the recording screen.

[AFTER PRESSING1]: Press the button to change settings. Press the button again to confirm the settings value, and to return to the recording screen.

[AFTER PRESSING2]: Press the button to change settings. Each press of the button switches the settings value. (Except that of exposure compensation) To confirm your selection and return to the recording screen, press the shutter button halfway.

[ISO Displayed Setting]

<table>
<thead>
<tr>
<th>[Front/Rear Dial]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
</tr>
</thead>
</table>

This sets the operations of the dials in the setting screen for ISO sensitivity. Assigning [ ] lets you change [ISO Auto Upper Limit Setting].

[Exposure Comp. Disp. Setting]

<table>
<thead>
<tr>
<th>[Cursor Buttons (Up/Down)]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
</tr>
</thead>
</table>

This sets the operations of the dials in the exposure compensation screen. Assigning [ ] lets you adjust flash output.

[Dial Set.]

[Assign Dial (F/SS)]

Sets the operations to be assigned to the dials in [P]/[A]/[S]/[M] modes.

<table>
<thead>
<tr>
<th>SET1</th>
<th>SET2</th>
<th>SET3</th>
<th>SET4</th>
<th>SET5</th>
</tr>
</thead>
<tbody>

<td>F</td>
<td>F</td>
<td>F</td>
</tr>
</tbody>
</table>

[Rotation (F/SS)]

Changes the rotational directions of the dials for aperture value and shutter speed adjustment.

[Control Dial Assignment]

Sets the function to be assigned to 🌅 on the recording screen.

[شعار] In [M] mode, this assigns the operation to adjust the aperture value. In other than [M] mode, this assigns the operation of exposure compensation.
### [Exposure Comp.]

<table>
<thead>
<tr>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
</tr>
</thead>
</table>

Assigns exposure compensation to [ ] or [ ]. (Except in [M] mode)

* The [Assign Dial (F/SS)] setting takes priority.

### [Dial Operation Switch Setup]

<table>
<thead>
<tr>
<th>[ ]</th>
<th>[ ]</th>
<th>[ ]</th>
</tr>
</thead>
</table>

In the Fn button [Dial Operation Switch], this sets the functions to be registered temporarily to [ ] or [ ]. (Register Functions to the Dials: 487)

### [Rotation (Menu Operation)]

| [ ] | [ ] | [ ] | [ ] | [ ] | [ ] | [ ] |

Changes the rotational direction of the dials when operating menus.

### [Joystick Setting]

[D.FOCUS Movement][Fn][MENU][OFF]

Sets the joystick movement on the recording screen.

**[D.FOCUS Movement]**: Moves the AF area and MF Assist. (AF Area Movement Operation: 158, Record Using MF: 167)

**[Fn]**: Operates as Fn buttons.

**[MENU]**: Operates as [ ]. Operations that can be performed by moving the joystick are disabled.

**[OFF]**: Disables the joystick.

### [Video Rec. Button (Remote)]

You can register a favorite function to the video rec. button on a Shutter Remote Control (optional).

* [Shutter Remote Control (Optional): 711]

* [Video Record] is registered in the default setting.
[Custom] menu (Monitor / Display (Photo))

▷ Default settings

[Auto Review]

<table>
<thead>
<tr>
<th>Setting</th>
<th>Default Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Duration Time (photo)]</td>
<td>[HOLD]/[0.5SEC] to [OFF]</td>
</tr>
<tr>
<td>[Duration Time (6K/4K PHOTO)]</td>
<td>[HOLD]/[OFF]</td>
</tr>
<tr>
<td>[Duration Time (Post-Focus)]</td>
<td>[HOLD]/[OFF]</td>
</tr>
<tr>
<td>[Playback Operation Priority]</td>
<td>[ON]/[OFF]</td>
</tr>
</tbody>
</table>

This displays an image immediately after it is recorded.

- **[Duration Time (photo)]**: Sets the Auto Review when taking pictures.
- **[Duration Time (6K/4K PHOTO)]**: Sets the Auto Review when recording 6K/4K photos.
- **[Duration Time (Post-Focus)]**: Sets the Auto Review when recording with Post-Focus.
- **[Playback Operation Priority]**: When this is set to [ON], you can toggle the playback screen during Auto Review, or delete pictures.
  - If you set [Duration Time (photo)] to [HOLD], the image recorded stays displayed until the shutter button is pressed halfway.
  - [Playback Operation Priority] will be fixed to [ON].
You can always confirm the effects of aperture on the recording screen when in [A]/[M] mode.
You can also confirm the shutter speed at the same time when in [M] mode.
• You can set the combination of the aperture effect and the shutter speed effect in [Effect].
• Preview also operates in the MF Assist screen when [Preview While MF Assist] is set to [ON].
• The preview of the shutter speed effect does not work when using a flash.
[Histogram]

<table>
<thead>
<tr>
<th>[ON]</th>
<th>[OFF]</th>
</tr>
</thead>
</table>
| This displays the histogram.  
Turning this [ON] displays the histogram transition screen.  
Press ▲▼◄► to set the position.  
• A histogram is a graph that displays brightness along the horizontal axis, and the number of pixels at each brightness level on the vertical axis.  
By looking at the distribution of the graph, you can determine the current exposure.  
(A) Dark  
(B) Bright  
• When the recorded image and the histogram do not match each other under the following conditions, the histogram is displayed in orange:  
  – During exposure compensation  
  – When the standard exposure is not achieved, such as in low light situations.  
• When the following function is being used, the [Histogram] is not available:  
  – [WFM/Vector Scope]  
• The histogram is an approximation in the recording mode. |
[Photo Grid Line]

Sets the grid line pattern to be displayed on the recording screen.
When using [ ], you can press ▲▼ → to set the position.
• When using [ ], you can also drag [ ] on the grid lines on the recording screen to move the position.

[AF Area Display]

Displays the AF areas for the [ ], [ ], [ ], [ ], [ ] to [ ] AF modes.
• AF areas are not displayed in the following cases:
  – When [ AFC Start Point (225-Area) ] is not used during [ ]
  – When AF area shapes are not registered in [ ] to [ ]
• When the following functions are being used, [ AF Area Display ] is not available:
  – Video recording
  – [6K/4K PHOTO]
[Live View Boost]

<table>
<thead>
<tr>
<th>[MODE1]/[MODE2]/[OFF]</th>
<th>[P/A/S/M] /[M]</th>
</tr>
</thead>
</table>

Displays the screen brighter to make it easier to check subjects and compositions even in low-light environment.

[MODE1]: Setting for low brightness, with priority given to a soft display.  
[MODE2]: Setting for high brightness, with priority given to image visibility.

• You can change the recording mode in which [Live View Boost] works by using [SET].
• This mode does not affect recorded images.
• Noise may be more noticeable in the screen than in the recorded image.
• This function does not work in the following cases:
  – When adjusting the exposure (when the shutter button is pressed halfway, for example)
  – When recording a video or 6K/4K photo
  – When using [Filter Settings]
  – When displaying the shutter speed effect of [Constant Preview] in the [M] mode
[Night Mode]

<table>
<thead>
<tr>
<th>Monitor</th>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>LVF</td>
<td>[ON]/[OFF]</td>
</tr>
</tbody>
</table>

Displays the monitor and viewfinder in red.
In dark environments, this reduces brightness of the screen that can make the surroundings difficult to see.
You can also set the luminance of the red display.

1. Press ▲▼➡➡ to select [ON] on the monitor or viewfinder (LVF).
2. Press [DISP.] to display the brightness adjustment screen.
   • Display the monitor to adjust the monitor, and display the viewfinder to adjust the viewfinder.
3. Press ⬅➡ to adjust luminance and then press ↘ or ↗.
   • This effect is not applied to images output via HDMI.
### [LVF/Monitor Disp. Set]

<table>
<thead>
<tr>
<th>LVF Disp. Set</th>
<th>Monitor Disp. Set</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Selects whether to show the live view without covering the information display, or to display over the entire screen.

- **[ ]**: Scales down images slightly so you can better review the composition of the images.

- **[ ]**: Scales images to fill the entire screen so you can see their details.

#### [Horizontal Image Flip(Monitor)]
- **[AUTO]**: The screen automatically flips horizontally according to the angle to which the monitor is opened or closed.
- **[ON]**: The screen is flipped horizontally all the time.
- **[OFF]**: Screen is not flipped.

#### [Vertical Image Flip(Monitor)]
- **[AUTO]**: The screen automatically flips vertically according to the angle to which the monitor is rotated.
- **[ON]**: The screen is flipped vertically all the time.
- **[OFF]**: Screen is not flipped.

*The settings for this function are not reflected in the playback screen.*
### [Expo.Meter]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>This displays the exposure meter.</td>
</tr>
</tbody>
</table>

- Set to [ON] to display the exposure meter when performing Program Shift, setting aperture, and setting shutter speed.
- If no operations are performed for a certain period of time, the exposure meter disappears.

### [Focal Length]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays the focal length on the recording screen during zoom control.</td>
</tr>
</tbody>
</table>

### [Blinking Highlights]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overexposed areas appear blinking in black and white during Auto Review or playback.</td>
</tr>
</tbody>
</table>

- The display without the highlights is added to the display shown when [DISP.] is pressed in the playback screen.

Use this to delete the highlight display. (⇒ Playback Screen: 90)

**[Sheer Overlay]**

<table>
<thead>
<tr>
<th>[ON]</th>
<th>[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[SET]</td>
<td>[Transparency]</td>
</tr>
<tr>
<td></td>
<td>[Image Select]</td>
</tr>
<tr>
<td></td>
<td>[Reset at Power Off]</td>
</tr>
<tr>
<td></td>
<td>[Disp. Image (shutter-press)]</td>
</tr>
</tbody>
</table>

Displays recorded pictures by overlapping on the recording screen.

- Use [Image Select] to select the pictures to be displayed.
  - Press ◀ ► to select pictures and then press ◡ or ◤ to confirm.
- If you set [Disp. Image (shutter-press)] to [OFF], [Sheer Overlay] is canceled while the shutter button is being pressed halfway or pressed fully.
- When the following functions are being used, [Sheer Overlay] is not available:
  - Video recording/[6K/4K PHOTO]/[Post-Focus]

**[I.S. Status Scope]**

<table>
<thead>
<tr>
<th>[ON]</th>
<th>[OFF]</th>
</tr>
</thead>
</table>

Displays a reference point (A) on the recording screen in order to let you check for camera shake.

- When the following functions are being used, [I.S. Status Scope] is not available:
  - Video recording/[6K/4K PHOTO]/[Post-Focus]

[Level Gauge]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays the level gauge which is useful in correcting camera tilt.</td>
</tr>
</tbody>
</table>

(A) Horizontal
(B) Vertical
(C) Green (no tilt)

* Even after correcting the tilt, there may still be an error of approx. ±1°.
* When the camera is tilted significantly upwards or downwards, the level gauge may not be displayed correctly.
* You can adjust the level gauge and reset the adjusted values in [Level Gauge Adjust.] in the [Setup] ([Monitor / Display]) menu. ([Level Gauge Adjust.]: 587)

[Luminance Spot Meter]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specify any spot on the subject to measure the luminance over a small area.</td>
</tr>
</tbody>
</table>

([Luminance Spot Meter]: 375)

[Framing Outline]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays the outline for the live view.</td>
</tr>
</tbody>
</table>

[Show/Hide Monitor Layout]

<table>
<thead>
<tr>
<th>[Control Panel]</th>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Black Screen]</td>
<td>[ON]/[OFF]</td>
</tr>
</tbody>
</table>

Displays the control panel and black screen when switching between displays using [DISP.] button. (Recording Screen: 88)
### [Custom] menu ([Monitor / Display (Video)])

<table>
<thead>
<tr>
<th>V-LogL View Assist</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Read LUT File]</td>
</tr>
<tr>
<td>[LUT Select]</td>
</tr>
<tr>
<td>LUT View Assist (Monitor)</td>
</tr>
<tr>
<td>LUT View Assist (HDMI)</td>
</tr>
</tbody>
</table>

You can show images with LUT data applied on the monitor/viewfinder, or output them via HDMI.

(⇨[V-LogL View Assist]: 398)

### HLG View Assist

<table>
<thead>
<tr>
<th>Monitor</th>
<th>[MODE1]/[MODE2]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>HDMI</td>
<td>[AUTO]/[MODE1]/[MODE2]/[OFF]</td>
</tr>
</tbody>
</table>

At recording or playback of HLG video, this displays images with converted color gamut and brightness on the camera monitor/viewfinder, or outputs these over HDMI.

(⇨[HLG View Assist]: 404)

### Anamorphic Desqueeze Display

| 1.066 | 1.85 | 1.50 | 1.33 | 1.18 | [OFF] |

This displays the de-squeezed images suited to the magnification of the anamorphic lens on this camera.

(⇨[Anamorphic Desqueeze Display]: 407)
### [Monochrome Live View]

<table>
<thead>
<tr>
<th>[ON]</th>
<th>[OFF]</th>
</tr>
</thead>
</table>

You can display the recording screen in black and white.

- If you use the HDMI output during recording, the output image will not be displayed in black and white.
- [Monochrome Live View] is not available when [Night Mode] is used.

### [Center Marker]

<table>
<thead>
<tr>
<th>[ON]</th>
<th>[OFF]</th>
</tr>
</thead>
</table>

The center of the recording screen will be displayed as `[+]`.

### [Frame Marker]

| [ON] | [OFF] |

The center of the recording screen will be displayed as `[+]`.

- **[Frame Aspect]**
- **[Frame Color]**
- **[Frame Mask]**

A frame with the set aspect ratio is displayed on the recording screen.

| → [Frame Marker]: 379 |

### [Zebra Pattern]

| [ZEBA1]/[ZEBA2]/[ZEBA1+2] | [OFF] |

- **[Zebra 1]**
- **[Zebra 2]**

Parts that are brighter than the benchmark value are displayed with stripes.

| → [Zebra Pattern]: 377 |
[WFM/Vector Scope]

[WAVE][VECTOR][OFF]
This displays the waveform monitor or the vector scope on the recording screen.
(⇒[WFM/Vector Scope]: 371)

[Color Bars]

[SMPTE][EBU][ARIB]
The color bars are displayed on the recording screen.
(⇒Color bars/Test Tone: 380)

[Video-Priority Display]

[ON][OFF]
When in [iA]/[P]/[A]/[S]/[M] modes, switch the recording screen display and the control panel to suit video recording, as with the [P] mode.
The playback screen also switches to a display that prioritizes video.
• When set to a setting where video recording is not available, such as [Post-Focus], [Video-Priority Display] is fixed to [OFF].
• [Video-Priority Display] works only during video recording when using the following functions:
  – [6K/4K PHOTO]
  – [Time Lapse Shot]
  – [Stop Motion Animation]
  – [Multiple Exposure]

### [Red REC Frame Indicator]

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>[ON]</td>
<td>[OFF]</td>
</tr>
</tbody>
</table>

A red frame is displayed on the recording screen that indicates that video is being recorded.

### [Streaming Blue Frame Indicator]

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>[ON]</td>
<td>[OFF]</td>
</tr>
</tbody>
</table>

Displays a blue frame on the screen during streaming.

<table>
<thead>
<tr>
<th>[Custom] menu ([IN/OUT])</th>
</tr>
</thead>
<tbody>
<tr>
<td>▶: Default settings</td>
</tr>
</tbody>
</table>

**[HDMI Rec Output]**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Info Display]</td>
<td>▶[ON]/[OFF]</td>
</tr>
<tr>
<td>[Down Convert]</td>
<td>▶[AUTO]/[4K/30p]/[4K/25p]/[1080p]/[1080i]/[OFF]</td>
</tr>
<tr>
<td>[HDMI Recording Control]</td>
<td>[ON]/[OFF]</td>
</tr>
<tr>
<td>[Sound Down Convert]</td>
<td>[AUTO]/[OFF]</td>
</tr>
<tr>
<td>[Sound Output (HDMI)]</td>
<td>▶[ON]/[OFF]</td>
</tr>
<tr>
<td>[HDMI MF Assist Output]</td>
<td>▶[ON]/[OFF]</td>
</tr>
</tbody>
</table>

Sets HDMI output during recording. (➔ [HDMI Output Image Quality (Resolution/Frame Rate): 429, HDMI Output Settings: 432] )
[Custom] menu ([Lens / Others])

- Default settings

[Lens Focus Resume]

[ON]/[OFF]
The camera saves the focus position when you turn it off. When an interchangeable lens that is compatible with power zoom is in use, the zoom position is also saved.

[Power Zoom Lens]

<table>
<thead>
<tr>
<th>[Step Zoom]</th>
<th>[ON]/[OFF]</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Zoom Speed]</td>
<td>[Photo]: [H]/[M]/[L]</td>
</tr>
<tr>
<td></td>
<td>[Video]: [H]/[M]/[L]</td>
</tr>
<tr>
<td>[Zoom Ring]</td>
<td>[ON]/[OFF]</td>
</tr>
</tbody>
</table>

Sets the screen display and operation when using an interchangeable lens compatible with power zoom. (⇒[Power Zoom Lens]: 180)

[Lens Fn Button Setting]

Sets the function to be assigned to the focus button of an interchangeable lens.
• When [Focus Stop] is set, focus is fixed while the focus button is being pressed.
**Aperture Ring Increment**

<table>
<thead>
<tr>
<th>[SMOOTH]</th>
<th>[1/3EV]</th>
</tr>
</thead>
</table>
| **[SMOOTH]**: You can finely adjust the aperture value.  
**[1/3EV]**: You can adjust the aperture value in increments of 1/3 EV. |

You can change the aperture adjustment increment by operating the aperture ring.

- This setting is available when an interchangeable lens that supports a click-less aperture ring (H-X1025: optional) is attached (As of May 2021).
- When taking pictures, this setting will take effect if the aperture ring is set to a position other than [A].
- If the position of the aperture ring is set to [A], the aperture value set by the camera will take effect and can be adjusted like with [1/3EV].
- During video recording, fine adjustments can be made like with [SMOOTH].
- When [SMOOTH] is set, fractions of aperture values are not displayed on the screen.

**Focus Ring Control**

<table>
<thead>
<tr>
<th>[NON-LINEAR]</th>
<th>[LINEAR]</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>[SET]</strong>: Sets the amount of movement for focusing using the focus ring. (When using supported lenses)</td>
<td></td>
</tr>
</tbody>
</table>
| **[NON-LINEAR]**: Focus responds by accelerating according to rotation speed of the focus ring.  
**[LINEAR]**: Focus responds at a constant amount according to the rotational angle of the focus ring.  
**[SET]**: Sets the rotational angle of the focus ring for when [LINEAR] is selected. |

- For the latest information on lenses that support focus ring control, see the support site below.  
https://panasonic.jp/support/global/cs/dsc/  
(English only)
When using a lens that does not have a communication function with the camera, register the lens information in the camera.

* This is linked with [Lens Information] in [Image Stabilizer] under the [Photo] ([Others (Photo)]) menu. ([Lens Information]: 249)

You can set on the menu, whether or not to record the camera’s vertical orientation information during video recording.

[ON]: Records vertical orientation information. Videos recorded with the camera held vertically will be automatically played vertically on the PC or smartphone etc. during playback.

[OFF]: Does not record vertical orientation information.

* On the playback screen of the camera, only the thumbnail display is played in vertical orientation.

[Monitor Backlight]/[LVF Luminance]

- [AUTO] [-3] to [+3]
  Adjusts monitor/viewfinder luminance.
  [AUTO]: The brightness is adjusted automatically depending on how bright it is around the camera.
  • Adjusts the monitor luminance when displaying the monitor, and the viewfinder luminance when displaying the viewfinder.
  • When either [AUTO] is set, or the adjusted value is set to positive side, the usage period will shorten.
  • When [Night Mode] is being used, [Monitor Backlight]/[LVF Luminance] are not available.

[Eye Sensor]

- [Sensitivity] [HIGH]/[LOW]
  This will set the sensitivity of the eye sensor.

- [LVF/Monitor Switch] [LVF/MON AUTO] (automatic viewfinder/monitor switching)/[LVF] (viewfinder)/[MON] (monitor)
  This will set the method for switching between the viewfinder and monitor.
  • If you press [LVF] to switch the display, the [LVF/Monitor Switch] setting will also switch.

[Level Gauge Adjust.]

- [Adjust.]
  Hold the camera in a horizontal position, and press or . The level gauge will be adjusted.

- [Level Gauge Value Reset]
  Restores the default level gauge setting.
### [Setup] menu ([IN/OUT])

- **[AF Beep Tone]**
  - (Pattern 1)/ (Pattern 2)/ (Pattern 3)

- **[E-Shutter Vol]**
  - (High)/ (Low)/ (Off)

- **[E-Shutter Tone]**
  - (Pattern 1)/ (Pattern 2)/ (Pattern 3)

Sets the beep sounds, AF beep, and electronic shutter sounds.

#### [Headphone Volume]

- [0] to [LEVEL15] ([LEVEL3])
  
  Adjusts the volume when headphones are connected.
  
  - Adjusting the Headphone Volume: 442
  
  - This functions in tandem with [Headphone Volume] in the [Video] ([Audio]) menu.

#### [Wi-Fi]

- [Wi-Fi Function] (→ 15. Wi-Fi/Bluetooth: 610)

- [Wi-Fi Setup] (→ [Wi-Fi Setup] Menu: 674)

- [Streaming Setup] (→ 16. Streaming Function: 676)
### [Bluetooth]

- **[Bluetooth]** ([Connecting to a Smartphone (Bluetooth Connection): 615]
- **[Send Image (Smartphone)]**: ([Smartphone: 651]
- **[Remote Wakeup]** ([Remote Wakeup: 644]
- **[Returning from Sleep Mode]** ([Shortening the Return Time from (Sleep Mode): 636]
- **[Auto Transfer]** ([Auto Transfer: 639]
- **[Location Logging]** ([Location Logging: 642]
- **[Auto Clock Set]** ([Auto Clock Set: 645]
- **[Wi-Fi network settings]**

**[Wi-Fi network settings]**: Registers the Wi-Fi access point. Wireless access points used to connect the camera to Wi-Fi networks will be registered automatically.

### [USB]

<table>
<thead>
<tr>
<th>[USB Mode]</th>
<th>![Select on connection]/ ![PC(Storage)]/ ![PC(Tether)]/ ![PictBridge(PTP)]</th>
</tr>
</thead>
</table>

This sets the communication method to be used when the USB connection cable is connected.

- **[Select on connection]**: Select this setting to select the USB communication system when connecting to another device.
- **[PC(Storage)]**: Select this setting to export images to a connected PC.
- **[PC(Tether)]**: Select this setting to control the camera from a PC installed with “LUMIX Tether”.
- **[PictBridge(PTP)]**: Select this setting when connecting to a printer that supports PictBridge.

[USB Power Supply]  [ON]/[OFF]
Provides power from the USB connection cable.
- Even if this item is set to [OFF], power will be supplied when the AC adaptor is connected.

[Battery Use Priority]
[BODY]/[BG]
Selects which battery to use first when the batteries are installed in both the camera and the Battery Grip.

[HDMI Connection]

Sets the HDMI output resolution for playback.
- [AUTO]: Outputs with a resolution suited to the connected external device.
- The items you can select depend on the [System Frequency] setting.
- If no image appears on the external device with [AUTO], switch to a constant setting other than [AUTO] to set a format supported by your external device.
(Refer to the operating instructions for the external device.)

[LUT View Assist (HDMI)]  [ON]/[OFF]
Images with LUT (Look-Up Table) data applied are output when you play back videos recorded with [Photo Style] set to [V-Log L].
- This is linked with [LUT View Assist (HDMI)] in [V-LogL View Assist] under the [Custom] ([Monitor / Display (Video)]) menu. (⇒ [V-LogL View Assist]: 398)

[Reset]

Returns the camera to its default settings.

(⇒ [Reset]: 100)
### [Setup] menu ([Others])

#### [Clock Set]
Sets the date and time.

<table>
<thead>
<tr>
<th>Current time</th>
<th>Time difference from GMT (Greenwich Mean Time)</th>
</tr>
</thead>
<tbody>
<tr>
<td>[A]</td>
<td>[B]</td>
</tr>
<tr>
<td>Press ▼► to select the time zone and then press ▼ or ▲ to confirm.</td>
<td></td>
</tr>
</tbody>
</table>

#### [Time Zone]
Sets the time zone.

1. Press ▼► to select the time zone and then press ▼ or ▲ to confirm.

- [A] Current time
- [B] Time difference from GMT (Greenwich Mean Time)

- If you are using Daylight Savings (DST), press ▲. (The time will move forward by 1 hour.)
- To return to the normal time, press ▲ again.
[System Frequency]

- Default setting specifications vary depending on the country or area where the camera was purchased.
- This changes the system frequency of videos that are recorded and played back.

[Pixel Refresh]

- The image sensor and image processing are optimized when the camera is purchased. Use this function when bright spots that do not exist in the subject get recorded.
- Turn the camera off and on after the pixels are corrected.

[Sensor Cleaning]

- Dust reduction to blow off the debris and dust that have affixed to the front of the image sensor is performed.
- You can use this function when the dust is particularly noticeable.
- Turn the camera off and on after cleaning.
[Language]

This sets the language displayed on the screen.

• If you set a different language by mistake, select [ francais ] from the menu icons to set the desired language.

[Firmware Version]

[Firmware Update][Software info]

You can check the firmware versions of the camera and lens. In addition, you can update the firmware, and display information about the camera software.

[Firmware Update]: Updates firmware.
1. Download the firmware. (→Firmware of Your Camera/Lens: 19)
2. Save the firmware to the root directory of the card (the first folder that appears when you access the card on your PC), and then insert the card into the camera.
3. Select [Firmware Update], press or , and then select [Yes] to update the firmware.

[Software info]: Displays information about the camera software.
• When a supported optional item (XLR Microphone Adaptor, etc.) is attached to the camera, you can also check its firmware version.

[Online Manual]

[URL display][QR Code display]

Displays the URL or QR code in order to browse the “Operating Instructions <Complete Guide>”.
[Playback] Menu

- How to Select an Image(s) in the [Playback] menu: 597
- [Playback] menu ([Playback Mode]): 599
- [Playback] menu ([Process Image]): 602
- [Playback] menu ([Add/Delete Info.]): 604
- [Playback] menu ([Edit Image]): 605
- [Playback] menu ([Others]): 608

How to Select an Image(s) in the [Playback] menu

Follow the steps below when the image selection screen is displayed.

• Images are displayed separately by card slot.
  To switch the card to display, press [ ] and select the card slot.
• You can only select/edit images on one card at a time.

❖ When [Single] has been selected

1. Press ◀ to select the image.

2. Press ◀ or ▶.
   • If [Set/Cancel] is displayed at the right bottom of the screen, the setting is canceled when ◀ or ▶ is pressed again.
When [Multi] has been selected

1. Press ▲▼◄► to select the image and then press ❯❯ or ◄◄ (repeat).
   • The setting is canceled when ◄◄ or ❯❯ is pressed again.

When [Protect] is selected

1. Press ▲▼◄► to select the image, and then press ❯❯ or ◄◄ to set (repeat).
   • The setting is canceled when ◄◄ or ❯❯ is pressed again.
[Playback] menu ([Playback Mode])

[Playback Mode]

<table>
<thead>
<tr>
<th>[Normal Play]</th>
<th>[Picture Only]</th>
<th>[Video Only]</th>
<th>[Rating]</th>
<th>[6K/4K PHOTO]</th>
<th>[Post-Focus]</th>
</tr>
</thead>
</table>

Filters the type of images to play back.
- When you have set [Rating], put a check mark in the rating level you want to display, then press [DISP].

[Slide Show]

<table>
<thead>
<tr>
<th>[All]</th>
<th>[Picture Only]</th>
<th>[Video Only]</th>
<th>[Rating]</th>
<th>[6K/4K PHOTO]</th>
<th>[Post-Focus]</th>
</tr>
</thead>
</table>

Selects image types and plays them back at regular intervals in order.
- When you have set [Rating], put a check mark in the rating level you want to display, then press [DISP].

[Start]: Starts slide show playback.
[Duration]: Sets repeat playback.
[Repeat]: Sets repeat playback.

Operations during slide show

- Plays/pauses (You can also perform the same operation by touching [▶️] or [❖])
- Move to the previous image
- Move to the next image
- Ends the slide show
- Adjusts the volume (You can also perform the same operation by touching [←] or [→])
- When [Video Only] is set, [Duration] is not available.
### [Rotate Disp.]

<table>
<thead>
<tr>
<th>[ON]/[OFF]</th>

Entering Characters

Follow the steps below when the character entry screen is displayed.

1. Enter characters.
   - Press ▲▼◄► to select characters and then press ◀ or ◁ until the character to enter is displayed. (Repeat this)
   - To repeatedly enter the same character, rotate ◀ or ◁ to the right to move the entry position cursor.
   - If you select an item and press ◀ or ◁, you can perform the following operations:
     - [ ▼ ▼ ]: Change the character type to [A] (upper case characters), [a] (lower case characters), [1] (numbers), and [&] (special characters)
     - [ ▼ ]: Enter a blank
     - [Delete]: Delete a character
     - [◄]: Move the entry position cursor to the left
     - [►]: Move the entry position cursor to the right
   - When entering a password, (A) shows the number of characters you have entered and the number of characters you can enter.

2. Complete entering.
   - Select [Set] and then press ◀ or ◁.

</table>

- Do not remove the card or battery or move to an area without any reception while sending images.
- The camera cannot be used to connect to a public wireless LAN connection.
- We strongly recommend that you set an encryption to maintain information security.
- We recommend that you use a sufficiently charged battery when sending images.
- When the remaining battery level is low, it may not be possible to connect to or maintain communication with other devices. (A message such as [Communication error] is displayed.)
- Images may not be completely sent depending on radio wave conditions. If the connection is terminated while sending images, images with missing parts may be sent.
Connecting to a Smartphone

- Flow of connecting a smartphone: 612
- Installing “LUMIX Sync”: 614
- Connecting to a Smartphone (Bluetooth Connection): 615
- Connecting to a Smartphone ([Wi-Fi connection]): 622

Connect with a smartphone which has the “Panasonic LUMIX Sync” (below: “LUMIX Sync”) smartphone app installed.
Use “LUMIX Sync” for remote recording and image transfers.

Flow of connecting a smartphone

1. Install “LUMIX Sync” on your smartphone. (➔ Installing “LUMIX Sync”: 614)

2. Connect to a smartphone.
   - Using a smartphone that supports Bluetooth Low Energy
     (➔ Connecting to a Smartphone (Bluetooth Connection): 615)
   - Using a smartphone that does not support Bluetooth Low Energy
     (➔ Connecting to a Smartphone ([Wi-Fi connection]): 622)
3 Operate the camera using the smartphone. (⇒ Operating the Camera with a Smartphone: 629)
   • [Remote shooting]: 631
   • [Shutter Remote Control]: 634
   • [Import images]: 637
   • [Auto Transfer]: 639
   • [Location Logging]: 642
   • [Remote Wakeup]: 644
   • [Auto Clock Set]: 645
   • [Camera settings copy]: 646

• You can also use the camera to transfer images to a smartphone.
  (⇒ Sending Images from the Camera: 647)
15. Wi-Fi/Bluetooth – Connecting to a Smartphone

**Installing “LUMIX Sync”**

“LUMIX Sync” is an application for smartphones provided by Panasonic.

<table>
<thead>
<tr>
<th>Supported OS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Android™: Android 7 or higher</td>
</tr>
<tr>
<td>iOS: iOS 12 or higher</td>
</tr>
</tbody>
</table>

1. **Connect the smartphone to a network.**
2. (Android) Select “Google Play™ Store”.  
   (iOS) Select “App Store”.
3. Enter “LUMIX” or “panasonic lumix sync” into the search box.
4. Select and install the “Panasonic LUMIX Sync”  

- Use the latest version.
- Supported OSs are current as of May 2021 and are subject to change.
- Read the [Help] in the “LUMIX Sync” menu for further details on how to operate.
- The app may not operate correctly depending on your smartphone.

For information on the “LUMIX Sync”, refer to the following support site:
https://panasonic.jp/support/global/cs/dsc/
(English only)
Connecting to a Smartphone (Bluetooth Connection)

Follow a simple connection setup procedure (pairing) to connect to a smartphone that supports Bluetooth Low Energy. When pairing is set up, the Wi-Fi connection will be established automatically by just operating “LUMIX Sync”.

• For the first-time connection, pairing settings are required. For information about connecting for the second and subsequent times (Connecting to a Paired Smartphone: 620)

• Supported smartphones
  Android™: Android 7 or higher with Bluetooth 4.0 or higher (excluding those that do not support Bluetooth Low Energy)
  iOS: iOS 12 or higher

• Turn on the smartphone’s Bluetooth function in advance.
1. On the smartphone, start up “LUMIX Sync”.
   - A message regarding device (camera) registration is displayed.
     Select [Next].
   - If you have closed the message, select [ ], then register the camera using [Camera registration (pairing)].

2. Check the content in the displayed guide and select [Next] until the screen to register the camera is displayed.
Operating the camera in accordance with the smartphone guide.

3 Set the camera to Bluetooth pairing standby state.

- Access camera settings and select [Bluetooth] → [Pairing]

The camera enters pairing standby state and the device name (A) is displayed.

4 On the smartphone, select the camera’s device name.

- (iOS devices) When a message to confirm the change of destination is displayed, select [Join].
5 **When a message indicating that device registration is complete, select [OK].**

- A Bluetooth connection between the camera and the smartphone will be made.

- The paired smartphone is registered as a paired device.

- During Bluetooth connection, [Bluetooth] is displayed in the recording screen.

- When the Bluetooth function is enabled, but a connection is not established with the smartphone, [Bluetooth] appears translucent.

- Up to 16 smartphones can be registered.

  - If you try to register more than 16 smartphones, the registration information will be deleted from the oldest first.
Wi-Fi connection with a Bluetooth connected smartphone
You can establish Wi-Fi connection by operating “LUMIX Sync”.
1. Select [ ] ([Remote shooting]) or [ ] ([Import images]) in the “LUMIX Sync” home screen.

End Bluetooth Connection
To terminate the Bluetooth connection, turn off the Bluetooth function of the camera.

- [ ] [ ] [Bluetooth] [Bluetooth] Select [OFF]

• Even if you terminate the connection, the pairing information for it will not be deleted.
Connecting to a Paired Smartphone

Connect paired smartphones using the following procedure.

1. Enable the Bluetooth function of the camera.
   - 再度 
     - [ ] 
     - [ ] 
     - [Bluetooth] 
     - [Bluetooth] 
     - [ON]

2. On the smartphone, start up “LUMIX Sync”.
   - If a message is displayed indicating that the smartphone is searching for cameras, close the message.

3. Select [ ].

4. Select [Bluetooth Setup].

5. Turn Bluetooth ON.

6. From [Camera registered] items, select the camera’s device name.

   - Even if you set up pairing with more than one smartphone, you can only connect to one smartphone at a time.
   - When pairing takes some time, canceling the pairing settings on both the smartphone and camera and re-establishing the connection may result in the camera being detected correctly.
15. Wi-Fi/Bluetooth – Connecting to a Smartphone

❖ Canceling Pairing

1. Cancel the pairing setting of the camera.
   - • [Wi-Fi] ⇒ [Settings] ⇒ [Bluetooth] ⇒ [Bluetooth] ⇒ [SET] ⇒ [Delete]

2. Select the smartphone for which to cancel the pairing.

   - Also cancel the pairing setting on the smartphone.
   - When [Reset] in the [Setup] ([Setting]) menu is used to reset the network settings, the information for registered devices is deleted.
15. Wi-Fi/Bluetooth – Connecting to a Smartphone

Connecting to a Smartphone ([Wi-Fi connection])

Use Wi-Fi to connect the camera and a smartphone. With default settings, simple connection with smartphones is possible without entering a password. You can also use password authentication for enhanced connection security.

1 Set the camera to Wi-Fi connection standby status.

- \(\text{Wi-Fi} \rightarrow [\text{Wi-Fi}] \rightarrow [\text{Wi-Fi Function}] \rightarrow [\text{New Connection}] \rightarrow [\text{Control With Smartphone}]

- The SSID (A) of the camera is displayed on the screen.
- You can also perform the same operation by pressing the Fn button assigned with [Wi-Fi].

(\(\Rightarrow\) Fn Buttons: 471)
2 In the setting menu of the smartphone, turn the Wi-Fi function ON.

3 Select the SSID displayed on the camera.

4 On the smartphone, start up “LUMIX Sync”.

5 (At the first connection) Confirm the device name displayed on the camera and then select [Yes].
Using Password Authentication to Connect

You can enhance Wi-Fi connection security by using password authentication through either QR code or manual input.

Scanning QR code to connect

1. Set [Wi-Fi Password] on the camera to [ON].
   -  ➔ [Wi-Fi Function] ➔ [Wi-Fi Setup] ➔ [Wi-Fi Password] ➔ [ON]
2. Display the QR code (A).
   -  ➔ [Wi-Fi Function] ➔ [New Connection] ➔ [Control With Smartphone]
   - You can also perform the same operation by pressing the Fn button assigned with [Wi-Fi]. (Fn Buttons: 471)
   - Press  or  to enlarge the QR code.

   ![QR code image](A)

• When a device different than the one you want to connect to is displayed, the camera will automatically connect to that device if you select [Yes].
• If there are other Wi-Fi connection devices nearby, we recommend using either QR code or manual password input to connect with password authentication. (Using Password Authentication to Connect: 624)
• When the following functions are being used, [Wi-Fi Function] is not available:
  – [Streaming Function]
  – [Auto Transfer]
3. On the smartphone, start up “LUMIX Sync”.
   • If a message is displayed indicating that the smartphone is searching for cameras, close the message.
4. Select [ ].
5. Select [Wi-Fi connection].
6. Select [QR code].
7. Scan the QR code displayed on the screen of the camera using “LUMIX Sync”.
   • (iOS devices) When a message to confirm the change of destination is displayed, select [Join].
8. (At the first connection) Confirm the device name displayed on the screen of the camera and then select [Yes].
Manually entering a password to connect

1. Display the screen in Step 2 (Scanning QR code to connect: 624).
2. In the setting menu of the smartphone, turn the Wi-Fi function ON.
3. On the Wi-Fi setup screen, select the SSID (B) displayed on the camera.
4. (At the first connection) Enter the password (B) displayed on the camera.
5. On the smartphone, start up “LUMIX Sync”.
6. (At the first connection) Confirm the device name displayed on the screen of the camera and then select [Yes].
Connection Methods Other Than the Default Settings

When connecting with [Via Network], or [WPS Connection] in [Direct], follow the steps below:

1. Display the connection method setting screen for the camera.
   • (Wi-Fi) ➔ [Settings] ➔ [Wi-Fi] ➔ [Wi-Fi Function] ➔ [New Connection] ➔ [Control With Smartphone]
2. Press [DISP.].

Connecting via network

1. Select [Via Network] and then press or .
   • Connect the camera to a wireless access point. ([Via Network]: 662)
2. In the setting menu of the smartphone, turn the Wi-Fi function ON.
3. Connect the smartphone to the wireless access point that the camera is connected to.
4. On the smartphone, start up “LUMIX Sync”.

Connecting directly

1. Select [Direct] and then press or .
   • Select [WPS Connection] to connect the camera to a smartphone. ([Direct]: 666)
2. On the smartphone, start up “LUMIX Sync”.

627
Terminating the Wi-Fi Connection
To end the Wi-Fi connection between the camera and smartphone, follow the steps below.

1. Press the shutter button halfway to put the camera in recording mode.

2. Terminate the Wi-Fi connection.
   •  
   
   • You can also perform the same operation by pressing the Fn button assigned with [Wi-Fi]. (Fn Button Assigned with [Wi-Fi]: 650)

3. On the smartphone, close the “LUMIX Sync”.
Operating the Camera with a Smartphone

- [Remote shooting]: 631
- [Shutter Remote Control]: 634
- [Import images]: 637
- [Auto Transfer]: 639
- [Location Logging]: 642
- [Remote Wakeup]: 644
- [Auto Clock Set]: 645
- [Camera settings copy]: 646

This explains the functions for operating the camera from a smartphone. Functions described in this document with the (Bluetooth) symbol require a Bluetooth connection by a smartphone that supports Bluetooth Low Energy.
Home Screen

When you start up “LUMIX Sync”, the home screen is displayed.

(A) : App settings
   This allows connection settings, camera ON/OFF operations, and displays Help.

(B) : [Import images] (➔ [Import images]: 637)

(C) : [Remote shooting] (➔ [Remote shooting]: 631)

(D) : [Shutter Remote Control] (➔ [Shutter Remote Control]: 634)

(E) : [Others] (Camera settings copy/live streaming) (➔ [Camera settings copy]: 646, 16. Streaming Function: 676)
You can use the smartphone to record from a remote location while viewing the live view images from the camera.

Getting started:
- Connect the camera to a smartphone. (Connecting to a Smartphone: 612)
- On the smartphone, start up “LUMIX Sync”.

1. **Select [Remote shooting]** in the home screen.
   - (iOS devices) When a message to confirm the change of destination is displayed, select [Join].
2 Start recording.

(A) Takes a picture
(B) Starts/ends the video recording

- The recorded image is saved on the camera.

- Certain features, including some settings, may not be available.
Operation Method During Remote Recording

Set either the camera or the smartphone as the priority control device to be used during remote recording.

Procedure:

1. Connect the camera and smartphone via Wi-Fi.
2. Access the Wi-Fi Setup menu on the camera.
3. Select [Priority of Remote Device].

- **[Camera]**
  - Operation is possible on both the camera and the smartphone.
  - The camera’s dial settings, etc. cannot be changed with the smartphone.

- **[Smartphone]**
  - Operation is possible only on the smartphone.
  - The camera’s dial settings, etc. can be changed with the smartphone.
  - To end remote recording, press any of the buttons on the camera to turn on the screen, and select [End].

*The default setting is [Camera].

*The setting of this function cannot be changed while the connection is active.*
15. Wi-Fi/Bluetooth – Operating the Camera with a Smartphone

[Shutter Remote Control]

**Bluetooth**

You can use the smartphone as a remote control for the shutter.

Getting started:

- Connect the camera to a smartphone. ( Connecting to a Smartphone: 612)
- On the smartphone, start up “LUMIX Sync”.

1. **Select [ ] ([Shutter Remote Control]) in the home screen.**
2. **Start recording.**
   - Starts/ends the video recording
   - Takes a picture
Bulb Recording

The shutter can be kept open from the start to end of recording, which is useful for recording of starry skies or night scenery.

Getting started:

• Set the camera to [M] mode. (Manual Exposure Mode: 263)
• Set the camera shutter speed to [B] (Bulb). ([B] (Bulb): 266)

1. Touch [ ] to start recording (keep touching, without removing your finger).
2. Remove your finger from [ ] to end recording.
   • Slide [ ] in the direction of [LOCK] to record with the shutter button locked in a fully-pressed state.
     (Slide [ ] back to its original position or press the camera shutter button to end recording)
   • During [B] (Bulb) recording, if the Bluetooth connection is broken, then carry out Bluetooth connection again, then end recording from the smartphone.
❖ Shortening the Return Time from [Sleep Mode]

You can shorten the time it takes for the camera to return from [Sleep Mode] when the [Shutter Remote Control] is used.

Getting started:
• Connect the camera to a smartphone by Bluetooth. (➔ Connecting to a Smartphone (Bluetooth Connection): 615)
• Set [Remote Wakeup] in [Bluetooth] to [ON].

• To use the [Shutter Remote Control] to cancel [Sleep Mode] on the camera, set [Bluetooth] in the [Setup] ([IN/OUT]) menu as follows, then connect via Bluetooth:
  – [Remote Wakeup]: [ON] (➔ [Remote Wakeup]: 644)
  – [Auto Transfer]: [OFF] (➔ [Auto Transfer]: 639)
• The camera cannot be turned on by using [Shutter Remote Control].
Transfer an image stored on the card to the smartphone.

Getting started:
- Connect the camera to a smartphone. (-connecting to a Smartphone: 612)
- On the smartphone, start up "LUMIX Sync".

1. **Select [ ] (Import images) in the home screen.**
   - (iOS devices) When a message to confirm the change of destination is displayed, select [Join].

2. **Select the image to transfer.**
   - You can switch the card displayed by touching (A).
15. Wi-Fi/Bluetooth – Operating the Camera with a Smartphone

3 Transfer the image.

- Select [ ].
  - If the image is a video, you can play it back by touching [ ] at the center of the screen.

- When a video is played back, this has a small data size and is transmitted using “LUMIX Sync”, therefore its image quality will differ from that of the actual video recording.
  - Depending on the smartphone and on the usage conditions, the image quality may deteriorate or the sound may skip during video or picture playback.
  - It is not possible to transfer images with file sizes exceeding 4 GB.
  - Images recorded using the following functions cannot be transferred:
    - [MOV] videos
    - [6K/4K PHOTO]/[Post-Focus]
15. Wi-Fi/Bluetooth – Operating the Camera with a Smartphone

[Auto Transfer]

Bluetooth
You can automatically transfer recorded pictures to a smartphone as they are taken.

Getting started:
• Connect the camera to a smartphone by Bluetooth. (⇒ Connecting to a Smartphone (Bluetooth Connection): 615)

1 Enable [Auto Transfer] on the camera.
• ON [Bluetooth] [Auto Transfer] [ON]
  • If a confirmation screen is displayed on the camera asking you to terminate the Wi-Fi connection, select [Yes] to terminate it.

2 On the smartphone, select [Yes] (for Android devices) or [Join] (for iOS devices).
  • The camera automatically makes a Wi-Fi connection.
3 Check the send settings on the camera and then press [Wi-Fi] or [Bluetooth].
   • To change the send setting, press [DISP.]. (Image Send Settings: 671)
   • Automatic image transfer is possible when [Wi-Fi] is displayed on the camera recording screen.

4 Record with the camera.
   • [Wi-Fi] is displayed in the recording screen of the camera while a file is being sent.

   To Stop the Automatic Transfer of Images

   [Wi-Fi] → [Wi-Fi] → [Bluetooth] → [Auto Transfer] → Select [OFF]
   • A confirmation screen is displayed, asking you to terminate the Wi-Fi connection.
If the [Bluetooth] and [Auto Transfer] settings of the camera are [ON], the camera automatically connects to the smartphone via Bluetooth and Wi-Fi when you turn on the camera.

Start up the “LUMIX Sync” on the smartphone to connect to the camera.

- When [Auto Transfer] is set to [ON], [Wi-Fi Function] cannot be used.
- If the camera is turned off during image transfer, and the file sending is interrupted, then turn on the camera to restart the sending.
  - If the storage status of unsent files changes, then sending of files may no longer be possible.
  - If there are many unsent files, then sending of all files may not be possible.
- Images recorded with the following functions cannot be transferred automatically:
  - Video recording/[6K/4K PHOTO]/[Post-Focus]
15. Wi-Fi/Bluetooth – Operating the Camera with a Smartphone

[Location Logging]

**Bluetooth**

The smartphone sends its location information to the camera via Bluetooth, and the camera performs recording while writing the acquired location information.

Getting started:
- Enable the GPS function on the smartphone.
- Connect the camera to a smartphone by Bluetooth. (Connecting to a Smartphone (Bluetooth Connection): 615)

1. **Enable [Location Logging] on the camera.**
   - ![Setting Location Logging]
     - The camera will enter a mode where location information can be recorded and [GPS] is displayed in the recording screen of the camera.

2. **Record images with the camera.**
   - Location information will be written to the recorded images.
When [ GPS ] on the recording screen appears translucent, location information cannot be acquired, therefore data cannot be written. Smartphone GPS positioning may not be possible if the smartphone is within a building, a bag, or similar. Move the smartphone to a position affording a wide view of the sky to improve positioning performance. In addition, refer to the operating instructions of your smartphone.

- Images with location information are indicated with [ GPS ].
- Be sure to pay special attention to the privacy, and likeness rights, etc. of the subject when you use this function. Use at your own risk.
- The smartphone drains its battery faster while acquiring location information.
Wi-Fi/Bluetooth – Operating the Camera with a Smartphone

[Remote Wakeup]

Bluetooth

Even when the camera is turned off, the smartphone can be used to start the camera and record images, or check the recorded images.

Getting started:
1. Connect to a smartphone using Bluetooth. (Connecting to a Smartphone (Bluetooth Connection): 615)
   • [ ] [Bluetooth] [Remote Wakeup] [ON]
3. Set the camera on/off switch to [OFF].
4. On the smartphone, start up "LUMIX Sync".

Turning On the Camera

   • (iOS devices) When a message to confirm the change of destination is displayed, select [Join].
   • The camera turns on, and automatically connects using Wi-Fi.

Turning Off the Camera

1. Select [ ] in the "LUMIX Sync" home screen.
2. Select [Turn off the camera].
3. Select [Power OFF].

• When you turn on the camera with the smartphone, the status indicator will flash.
• When [Remote Wakeup] has been set, the Bluetooth function continues to work even if the camera on/off switch is set to [OFF], so the battery will drain.
15. Wi-Fi/Bluetooth – Operating the Camera with a Smartphone

### [Auto Clock Set]

#### Bluetooth

Synchronize the clock and the time zone setting of the camera with those of a smartphone.

Getting started:
- Connect the camera to a smartphone by Bluetooth. (⇒ Connecting to a Smartphone (Bluetooth Connection): 615)

**1. Enable [Auto Clock Set] on the camera.**

- ![Image of menu options: Bluetooth settings](image)

![Image of Bluetooth settings menu](image)
15. Wi-Fi/Bluetooth – Operating the Camera with a Smartphone

[Camera settings copy]

This saves the camera’s settings information to the smartphone. Saved settings information can be loaded to the camera, letting you set the same settings on multiple cameras.

Getting started:
• Connect the camera to a smartphone by Bluetooth. (Connecting to a Smartphone (Bluetooth Connection): 615)

1 Select [ Others ] ([Others]) → [ ] ([Camera settings copy]) in the “LUMIX Sync” home screen.

2 Save or load settings information.
   • Read the [Help] in the “LUMIX Sync” menu for further details on how to operate the “LUMIX Sync”.

   • Only settings information from the same model can be loaded.
   • When transferring settings information, a Wi-Fi connection is automatically created.
     (iOS devices) When a message to confirm the change of destination is displayed, select [Join].
   • You can save or load the settings information of items that are the same as those in [Save/Restore Camera Setting] under the [Setup] ((Setting)) menu. (List of Default Settings/Custom Saving/Settings Available for Copying: 771)

Bluetooth
Sending Images from the Camera

- [Smartphone]: 651
- [PC]: 655
- [Printer]: 659

Operate the camera to send recorded images to a device connected by Wi-Fi.

Operation flow

1. **Select the sending method.**
   Select the sending method from the [Send Images While Recording] and [Send Images Stored in the Camera] camera menus.

2. **Select the destination (type of the destination device).**
   - [Smartphone] (➔ [Smartphone]: 651)
   - [PC] (➔ [PC]: 655)
   - [Printer] (➔ [Printer]: 659)

3. **Select the connection method and then connect by Wi-Fi.**
   - [Via Network] (➔ [Via Network]: 662)
   - [Direct] (➔ [Direct]: 666)

4. **Check the send settings.**
   Change the send settings as necessary.
   - Image send settings (➔ [Image Send Settings: 671])
5  **([Send Images While Recording]) Take pictures.**
This automatically sends the recorded pictures as they are taken.

  **([Send Images Stored in the Camera]) Select an image.**
Send the selected images.
- Selecting images ([Selecting Images: 673])

Refer to the following pages for the steps common to all devices.
- Wi-Fi connections: [Via Network] ([Via Network]: 662)/[Direct] ([Direct]: 666)
- Image send settings ([Image Send Settings: 671])
- Selecting images ([Selecting Images: 673])

- When recording, recording is prioritized so it will take time for sending to complete.
- If the camera is turned off, or the Wi-Fi is disconnected before sending is completed, then sending will not restart.
- You may not be able to delete files or use the [Playback] menu while sending.
- When the following functions are being used, [Wi-Fi Function] is not available:
  - [Streaming Function]
  - [Auto Transfer]
Images That Can be Sent

Images that can be sent differ depending on the destination device.

<table>
<thead>
<tr>
<th>Destination device</th>
<th>Images that can be sent</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Smartphone]</td>
<td>[Send Images While Recording] JPEG/RAW</td>

</tr>
</tbody>
</table>

* Depending on the Wi-Fi function being used or the connection destination, you may not be able to perform some of these operations.
15. Wi-Fi/Bluetooth – Sending Images from the Camera

[Smartphone]

Transfer recorded images to a smartphone connected using Wi-Fi.

Getting started:
• Install “LUMIX Sync” on your smartphone. (Installing “LUMIX Sync”: 614)

1 Select the method for sending the images on the camera.

[Wi-Fi Function] [New Connection] [Send Images While Recording]/[Send Images Stored in the Camera]

2 Set the destination to [Smartphone].
3 Connect the camera to a smartphone by Wi-Fi. 
   • Select [Via Network] (⇒ [Via Network]: 662) or [Direct] (⇒ [Direct]: 666), and then connect.

4 On the smartphone, start up “LUMIX Sync”.

5 Select the destination smartphone on the camera.

6 Check the send settings and then press  or .
   • To change the send settings of images, press [DISP.]. (⇒ Image Send Settings: 671)

7 (When [Send Images While Recording] is selected) Take pictures.
   • [ ] is displayed in the recording screen of the camera while a file is being sent.
   • To end the connection, follow the steps below:
     造血 ⇒ [ ] ⇒ [ ] ⇒ [Wi-Fi] ⇒ [Wi-Fi Function] ⇒ [Yes]

   (When [Send Images Stored in the Camera] is selected) Select an image.
   • To end the connection, select [Exit].
Send a single image
1. Press ◄► to select the image.
2. Press [Q].
3. Select [Single Select].
   - To change the send settings of images, press [Disp]. (Image Send Settings: 671)
4. On the smartphone, select [Yes] (for Android devices) or [Join] (for iOS devices).
   - This connects automatically using Wi-Fi.
Send multiple images
1. Press [Q].
2. Select [Multi Select].
   • To change the send settings of images, press [DISP]. (⇒ Image Send Settings: 671)
3. Select the images and then transfer.
   ◀▶: Select images
   ◘ or ◔: Set/Cancel
   [DISP.]: Transfer
4. On the smartphone, select [Yes] (for Android devices) or [Join] (for iOS devices).
   • This connects automatically using Wi-Fi.

• When the following functions are being used, [Wi-Fi Function] is not available:
  – [Streaming Function]
  – [Auto Transfer]

Using the menu to transfer easily

Settings: [Single Select]/[Multi Select]

• If [Single Select], press ◀▶ to select the image and then press ◘ or ◔ to execute.
• If [Multi Select], use the same operation as with “Send multiple images”.
Send recorded images to the PC connected with Wi-Fi.

**Supported OS**
- Windows: Windows 10
- Mac: macOS 10.13, 10.14, 10.15.3 to 10.15.7, 11.0 to 11.2

Getting started:
- Turn on the PC.
- Create a destination folder for images.
- If the workgroup of the destination PC has been changed from the standard setting, change the corresponding setting of the camera in [PC Connection]. ([PC Connection]: 674)

**Create a Destination Folder for Images**

**When using Windows (Example for Windows 10)**
1. Select the destination folder and then right-click.
2. Select [Properties] and then enable folder sharing.

**When using Mac (Example for macOS 10.14)**
1. Select the destination folder and then click the items in the following order.
   - [File] ➔ [Get Info]
2. Enable folder sharing.
15. Wi-Fi/Bluetooth – Sending Images from the Camera

- Create a PC account name (up to 254 characters) and password (up to 32 characters) consisting of alphanumeric characters. A destination folder may not be created if the account name includes non-alphanumeric characters.
- When the computer name (NetBIOS name for Mac) contains a space (blank character), etc., it may not be recognized. In that case, we recommend changing the name to one consisting only of 15 or less alphanumeric characters.
- Refer to the operating instructions for your PC or Help on the OS for detailed setting procedures.

1. Select the method for sending images on the camera.
   - [Wi-Fi] → [Wi-Fi Function] → [New Connection] → [Send Images While Recording]/[Send Images Stored in the Camera]

2. Set the destination to [PC].
15. Wi-Fi/Bluetooth – Sending Images from the Camera

3 Connect the camera and PC by Wi-Fi.
   • Select [Via Network] (→ [Via Network]: 662) or [Direct] (→ [Direct]: 666), and then connect.

4 Enter the computer name of the PC name you want to connect to (for Mac, the NetBIOS name).
   • How to enter characters (→ Entering Characters: 609)

5 Select a folder for storing images.
   • Folders sorted by sent date will be created in the selected folder, and images will be saved there.
6 Check the send settings and then press or .
• To change the send setting, press [DISP]. (Image Send Settings: 671)

7 (When [Send Images While Recording] is selected) Take pictures.
• [ ] is displayed in the recording screen of the camera while a file is being sent.
• To end the connection, follow the steps below:
   [ ] [ ] [Wi-Fi] [Wi-Fi Function] [Yes]
(When [Send Images Stored in the Camera] is selected)
Select an image.
• To end the connection, select [Exit].

• If the screen for a user account and password entry appears, enter the one you set on your PC.
• When the firewall of the OS, security software, etc. is enabled, connecting to the PC may not be possible.
• When the following functions are being used, [Wi-Fi Function] is not available:
  – [Streaming Function]
  – [Auto Transfer]
15. Wi-Fi/Bluetooth – Sending Images from the Camera

You can send images to a PictBridge (wireless LAN)*1-supported printer connected by Wi-Fi for printing.

*1 DPS over IP standard-compliant

1 Select the method for sending images on the camera.

   - Select [ ] [ ] [ ] [Wi-Fi] [Wi-Fi Function] [New Connection] [Send Images Stored in the Camera]

2 Set the destination to [Printer].

   - Choose [Printer] from the list

   ![Image of destination selection screen]

659
15. Wi-Fi/Bluetooth – Sending Images from the Camera

3 Connect the camera to a printer by Wi-Fi.
   • Select [Via Network] (→ [Via Network]: 662) or [Direct] (→ [Direct]: 666), and then connect.

4 Select the destination printer.

5 Select and print images.
   • The procedure for selecting images is the same as the one for when the USB connection cable is connected. (→ Printing: 702)
   • To terminate the connection, press [ ].

   • For details about PictBridge (wireless LAN-compatible) printers, contact their manufacturers.
   • When the following functions are being used, [Wi-Fi Function] is not available:
     – [Streaming Function]
     – [Auto Transfer]
Wi-Fi Connections

- [Via Network]: 662
- [Direct]: 666
- Connect to Wi-Fi Using Previously Saved Settings: 668

When [New Connection] has been selected in [Wi-Fi Function] in [Wi-Fi] of the [Setup] ([IN/OUT]) menu, select the connection method from either [Via Network] or [Direct] to connect.

On the other hand, when you use [Select a destination from History] or [Select a destination from Favorite], the camera connects to the selected device with the previously-used settings.
15. Wi-Fi/Bluetooth – Wi-Fi Connections

[Via Network]

Connect the camera and an external device through the wireless access point.

1 Select the method for connecting to a wireless access point.

![Select connection method]

Settings: [WPS (Push-Button)]/[WPS (PIN code)]/[From List]

• After selecting [Via Network] once, the camera will connect to the previously-used wireless access point. To change the wireless access point used for connection, press [DISP.] and change the connection destination.
• Check the operating instructions and settings of the wireless access point.
15. Wi-Fi/Bluetooth – Wi-Fi Connections

[*WPS (Push-Button)]*

Press the WPS button on the wireless access point to set up a connection.

1. Press the wireless access point WPS button until it switches to WPS mode. (Example)

[*WPS (PIN code)]*

Enter a PIN code into the wireless access point to set up a connection.

1. On the camera screen, select the wireless access point you are connecting to.
2. Enter the PIN code displayed on the camera screen into the wireless access point.
3. Press or of the camera.
15. Wi-Fi/Bluetooth  – Wi-Fi Connections

[From List]

Searches for a wireless access point to use, and connects to it.

- Confirm the encryption key of the wireless access point.

1. Select the wireless access point you are connecting to.
   - Press [DISP.] to run a wireless access point search again.
   - If no wireless access point is found (Connecting by Manual Input: 665)

2. (If network authentication is encrypted) Enter the encryption key.
   - How to enter characters (Entering Characters: 809)
1. Wi-Fi/Bluetooth – Wi-Fi Connections

 Connecting by Manual Input

- Check the SSID, network authentication, encryption, and encryption key of the wireless access point you are using.

1. In the screen in Step 1 of "[From List]", select [Manual Input].
2. Enter the SSID of the wireless access point you are connecting to, and then select [Set].
   - How to enter characters (→ Entering Characters: 609)
3. Select the network authentication.
   
   [WPA2-PSK]/[WPA2/WPA-PSK]
   
   Supported encryption: [TKIP], [AES]

   [No Encryption]

4. (When other than [No Encryption] is selected) Enter the encryption key and then select [Set].
15. Wi-Fi/Bluetooth – Wi-Fi Connections

**[Direct]**

Directly connect the camera and the external device.

1. Select the method for connecting with the destination device.

   - **[WPS Connection]**
     - **[WPS (Push-Button)]:** Press the WPS button on the external device to connect.
     - On the camera, press [DISP.] to extend the connection wait time.
   - **[WPS (PIN code)]:** Enter the PIN code into the camera, and connect.
15. Wi-Fi/Bluetooth – Wi-Fi Connections

[Manual Connection]

Search for the camera on the destination device to connect.
Enter the SSID and password displayed on the camera into the device.

• If the destination is set to [Smartphone], the password is not displayed. Select the SSID to establish a connection. (Connecting to a Smartphone ([Wi-Fi connection]): 622)

• Please also refer to the operating instructions for the device to be connected.
Connect to Wi-Fi Using Previously Saved Settings

Use the Wi-Fi connection history to connect using the same settings as previously.

1. **Display the Wi-Fi connection history.**
   - Press [DISP.] to confirm details of the connection history.

2. **Select the History item to connect to.**
   - Press [DISP.] to confirm details of the connection history.
Register to Favorite

You can register the Wi-Fi connection history to Favorite.

1 Display the Wi-Fi connection history.
   - [Wi-Fi] ➔ [Wi-Fi Function] ➔ [Select a destination from History]
2 Select the History item to register and then press ►.
3 Enter a registration name and then select [Set].
   - How to enter characters (Entering Characters: 609)
   - A maximum of 30 characters can be entered. A two-byte character is treated as two characters.

Editing Items Registered in Favorite

1 Display items registered to Favorite.
   - [Wi-Fi] ➔ [Wi-Fi Function] ➔ [Select a destination from Favorite]
2 Select the History item to edit in Favorite and then press ►.

- [Remove from Favorite]
- [Change the Order in Favorite]
   Specify the destination location of the desired item to change the display order.
- [Change the Registered Name]
   Enter characters to change the registered name.
   - How to enter characters (Entering Characters: 609)
• The number of items that can be saved in History is limited. Register frequently-used connection settings to Favorite.
• When [Reset] in the [Setup] ([Setting]) menu is used to reset the network settings, the content registered in History and Favorite is deleted.
• If the device you want to connect to (smartphone, etc.) is connected to a wireless access point other than the camera, you cannot connect the device to the camera using [Direct]. Change the Wi-Fi settings of the device you want to connect to so that the access point to be used is set to the camera. You can also select [New Connection] and reconnect the devices. (Connecting to a Smartphone ([Wi-Fi connection]): 622)
• It may be difficult to connect to networks to which many devices are connected. In these cases, connect using [New Connection].
• When the following functions are being used, [Wi-Fi Function] is not available:
  – [Streaming Function]
  – [Auto Transfer]
15. Wi-Fi/Bluetooth – Send Settings and Selecting Images

Send Settings and Selecting Images

- **Image Send Settings**: 671
- **Selecting Images**: 673

### Image Send Settings

Set the size, file format, and other items for sending the image to the destination device.

1. **After Wi-Fi connection, the send settings confirmation screen will be displayed, so press [DISP.]**.

2. **Change the send settings.**
**[Size]**
Resize the image to send.

**[Original]/[Change] ([M], [S], or [VGA])**

**[File Format]**
Sets the file format of images to send.

**[JPG]/[RAW + JPG]/[RAW]**

* This setting is possible when the destination supports the sending of RAW images from this camera. (Images That Can be Sent: 649)
15. Wi-Fi/Bluetooth – Send Settings and Selecting Images

**Selecting Images**
When sending by [Send Images Stored in the Camera], select the images using the following procedure.

1. Select [Single Select] or [Multi Select].
2. Select the image.

**[Single Select] setting**
1. Press 
2. Press or .

**[Multi Select] setting**
1. Press 
   - Press or . (Repeat this)
   - Images are displayed separately by card slot.
   - To cancel the setting, press or again.
   - Selecting images at once is possible only for the images in a single card.

[Wi-Fi Setup] Menu

This configures the settings required for the Wi-Fi function. The settings cannot be changed when connected to Wi-Fi.

1. Displaying the [Wi-Fi Setup] menu.

   - [Wi-Fi] ➔ [Wi-Fi Setup]

   [Priority of Remote Device]
   This sets either the camera or the smartphone as the priority control device to be used during remote recording. (Operation Method During Remote Recording: 633)

   [Wi-Fi Password]
   You can use a password to connect for enhanced security. (Using Password Authentication to Connect: 624)

   [PC Connection]
   You can set the workgroup. To send images to a PC, you need to connect to the same workgroup as the destination PC. (The default setting is "WORKGROUP").
   - To change the workgroup name, press or and enter the new workgroup name.
     - How to enter characters (Entering Characters: 609)
   - To return to the default settings, press [DISP].
[Device Name]
You can change the name (SSID) of the camera.
• To change the SSID name, press [DISP.] and enter the new SSID name.
  How to enter characters (Entering Characters: 609)
• A maximum of 32 characters can be entered.

[Wi-Fi Function Lock]
To prevent incorrect operation and use of the Wi-Fi function by a third party and to protect personal information in the camera and included with images, protect the Wi-Fi function with a password.

[Setup]: Enter any 4-digit numbers as the password.
• How to enter characters (Entering Characters: 609)
[Cancel]: Cancel the password.
• Once a password is set, you are required to enter it each time you use the Wi-Fi function.
• If you forget your password, you can use [Reset] in the [Setup] ([Setting]) menu to reset the network settings and thereby reset the password.

[Network Address]
Displays the MAC address and IP address of the camera.
16. Streaming Function

- Stream by Operating a Smartphone: 677
- Stream by Operating the Camera: 679
- Streaming Settings: 682

Live stream the camera’s images and audio over the internet.

- To start streaming, there is a smartphone operation method and camera operation method.
- This camera supports RTMP/RTMPS\(^{*1}\).
- You can stream to video sharing websites that support RTMP or RTMPS.

\(^{*1}\) Communication protocol for streaming
Stream by Operating a Smartphone

Operate the smartphone app “LUMIX Sync” to start streaming.

Getting started:
• Install “LUMIX Sync” on your smartphone. (Installing “LUMIX Sync”: 614)
• Connect the camera to a smartphone by Bluetooth. (Connecting to a Smartphone (Bluetooth Connection): 615)

(Camera operation)
1 Set the mode dial to [M].

(Smartphone operation)
2 Set streaming with “LUMIX Sync”.
   1 Start up “LUMIX Sync”.
   2 Select [Others] ➤ [Live streaming] in the “LUMIX Sync” home screen.
   3 Select a video sharing website and login.
      • When inputting a streaming destination address manually, select [Stream with RTMP/RTMPS].
4 Set streaming details.
   [Wi-Fi Connection Setting]: Sets the wireless access point the camera
   connects to when streaming.
   [Streaming Quality]: Sets the image quality that will be streamed.
   [Privacy settings]: Selects privacy setting.
5 Select [Set to the camera].
   • If the message [Unable to confirm security of the streaming address.
     Continue?] is displayed, check that the URL of the streaming destination
     is correct before continuing the connecting operation.
   • The settings will be sent from the smartphone to the camera.
   • The [Streaming Setup] of the camera turns [ON], and the camera
     connects via Wi-Fi to the access point.
   • [ ] is displayed on the recording screen.

3 Start streaming.
   • Select [Start streaming] on “LUMIX Sync”.
   • [ ] is displayed on the recording screen.

4 Stop streaming.
   • Select [Stop streaming] on “LUMIX Sync”.

5 End the streaming function.
   • If you select [End streaming] on “LUMIX Sync”, the [Streaming
     Setup] of the camera will be set to [OFF].
Stream by Operating the Camera

Sets the streaming destination on a PC and saves it to a card. Insert the card to the camera and start streaming by operating the camera.

Getting started:
• Install “LUMIX Network Setting Software” to the PC.
  (English only)

  Supported OS
  Windows: Windows 10
  Mac: macOS 10.13, 10.14, 10.15.3 to 10.15.7, 11.0 to 11.2
• Insert a card into the PC.

(PC operation)

1 Set the streaming destination on the “LUMIX Network Setting Software”.
   1 Start up “LUMIX Network Setting Software”.
   2 Login to a video sharing website and retrieve a streaming destination
      (URL, stream key).
3 Input the streaming destination (URL, stream key) to “LUMIX Network Setting Software” and select [Next].

4 Set the output destination (card) and file name, and select [Save].
   • Characters that can be set in [File Name]: Alphabet (uppercase), numbers, up to 8 characters.
   • To prevent usage from a third party, you can secure the streaming destination with a password.
     – Put a check mark in [Password].
     – When you set a password, password input will be required when loading the streaming destination.
   • You can enter any 4-digit numbers as the password.
   • The settings set at step 3 is saved in the card.

(Camera operation)

2 Insert a card to the camera.

3 Set up streaming settings on the camera.

1 Set the mode dial to [ ].

2 Load the streaming destination to the camera.
   • [Wi-Fi] → [Wi-Fi Connection Setting] → [Save/Load Streaming Address] → [Load]
   • If a password is set at step 1, input the password.

3 Set the streaming quality and wireless access point to connect to.
   • [Wi-Fi] → [Wi-Fi Connection Setting] → [Streaming Settings: 682]

4 Set [Streaming Function] to [ON].
   • [Wi-Fi] → [Wi-Fi Connection Setting] → [Streaming Function] → [ON]
   • If the message [Unable to confirm security of the streaming address. Continue?] is displayed, check that the URL of the streaming destination is correct before continuing the connecting operation.
   • The camera connects to the access point via Wi-Fi.
   • [ ] is displayed on the recording screen.
4 **Start streaming.**
- Press the shutter button or video rec. button.
- [ ] is displayed on the recording screen.
- Operations to start streaming may be needed on the video sharing website.

5 **Stop streaming.**
- Press the shutter button or video rec. button.

6 **End the streaming function.**
- [ ] ➔ [ ] ➔ [Wi-Fi] ➔ [Streaming Setup] ➔ [Streaming Function] ➔ [OFF]
## Streaming Settings

**Notes When Using the Streaming Function:** 686

Configures streaming settings.

<table>

- If the streaming destination is an RTMPS, an image quality with a bit rate of 16 Mbps or above cannot be set.
- The image output via HDMI is output with the resolution and frame rate according to the combinations of the [Streaming Quality] and [Down Convert] settings.
  - When [Streaming Quality] is set to [HD], the output is in [FHD] resolution.
Notes When Using the Streaming Function

Operation is as follows when using the streaming function:

- The following functions are not available:
  - [Hybrid Log Gamma] ([Photo Style])
  - [Miniature Effect] ([Filter Settings])
  - [Rec. File Format]
  - [Rec Quality]
  - [Rec Quality (My List)]
  - [Variable Frame Rate]
  - [96kHz/24bit], [48kHz/24bit] ([XLR Mic Adaptor Setting])
  - [Loop Recording (video)]
  - [Segmented File Recording]
  - [Live Cropping]
  - [Wi-Fi Function] ([Wi-Fi connection destination during streaming can be set in [Streaming Setup].])
  - Pairing function of [Bluetooth]

- The streaming function is not available when using the following functions:
  - When [System Frequency] is set to [24.00Hz (CINEMA)]
  - During USB connection (Excludes when supplying power using a USB connection cable)
16. Streaming Function – Streaming Settings

- Displays a blue frame on the screen during streaming:
  
  ![Streaming Blue Frame Indicator](image)

- When you press the video rec. button, the images being streamed will be recorded on the external recorder output via HDMI:

  ![HDMI Recording Control](image)

- If you turn the camera off without ending the streaming function, when the next time the camera is turned on, it is automatically reconnected to the connection destination that was previously connected.

- Video cannot be recorded to the cards while using streaming function.

- The menu screen cannot be displayed while streaming.

- The camera's recording information will not be displayed on the streamed images.

- The required conditions for streaming differ depending on the video sharing website. Check the video sharing website for details.
17. Connecting to Other Devices

- Viewing on a TV: 690
- Importing Images to a PC: 694
- Storing on a Recorder: 698
- Tethered Recording: 699
- Printing: 702

This chapter describes connections with other devices, such as TVs and PCs.
Connect using either the [HDMI] socket or the USB port on the camera.
Refer to the sections below for more details about connections.

- Check the direction of the terminals and plug in/out straight holding onto the plug.
  (Inserting these at an angle may cause deformation or malfunction)
- Do not connect the cable to the wrong terminals. This may cause a malfunction.

[HDMI] socket

Connect the camera and TV with a commercially available HDMI cable.

- Use a “High Speed HDMI cable” with the HDMI logo.
  Cables that do not comply with the HDMI standards will not work.
  “High Speed HDMI cable” (Type A–Type A plug, up to 1.5 m (4.9 feet) long)
**USB port**

*Do not use any other USB connection cables except the supplied one.*
Viewing on a TV

You can connect the camera to an external monitor or TV to view recorded pictures and videos.

Getting started:
• Turn off the camera and TV.

1 Connect the camera and TV with a commercially available HDMI cable. ([HDMI] socket: 688)
2 Turn on the TV.
3 Switch the TV input to HDMI input.
4 Turn on the camera.
5 Display the playback screen.
  • Press [ ].
  • The recorded images are displayed on the TV. (The monitor and viewfinder of the camera will turn off.)
17. Connecting to Other Devices – Viewing on a TV

- With the default settings, pictures are output at the optimal resolution for the connected TV. The output resolution can be changed in [Output Resolution(Playback)]. ([HDMI Connection]: 590)
- Depending on the aspect ratio, gray bands may be displayed on the top and bottom or the left and right of images. You can change the band color in [Background Color(Playback)] in [HDMI Connection] of the [Setup] ([IN/OUT]) menu. ([HDMI Connection]: 590)
- HDMI output is not possible if you connect a USB connection cable at the same time while [USB Mode] is set to [PC(Storage)] or [PictBridge(PTP)].
- If the temperature of the camera rises, [ ▶️ ] may be displayed, recording may stop, and some functions may become unavailable temporarily. Wait until the camera cools down.
- Change the screen mode on your TV if images are displayed with the top or bottom cut off.
- Depending on the connected TV, 6K/4K burst files may not be played back correctly.
- Please also refer to the operating instructions for the TV.

<p>| | |</p>

Using VIERA Link

VIERA Link (HDAVI Control™) is a function that allows you to use your remote control for the Panasonic TV for easy operations when the camera has been connected to a VIERA Link compatible device using an HDMI cable for automatic linked operations. (Not all operations are possible.)

To use VIERA Link, you need to also configure the settings on the TV. For the setting procedure, refer to the operating instructions for the TV.

1. Connect the camera to a Panasonic TV compatible with VIERA Link using a commercially available HDMI cable. ([HDMI] socket: 688)
2. Turn on the camera.
3. Turn on the VIERA Link.
   - Press [ ][HDMI Connection] [VIERA Link (CEC)] [ON]
4. Display the playback screen.
   - Press [ ].
5. Operate with the remote control for the TV.

Power off link

If you turn off the TV with its remote control, the camera will also turn off.

Automatic input switching

If you turn on the camera and then press [ ], the input of the TV automatically switches to input to which this camera is connected. Furthermore, when the TV power is in the standby state, it turns on automatically. (When "Power on link" on the TV is set to "Set")
• VIERA Link is a unique Panasonic function built on an HDMI control function using the standard HDMI CEC (Consumer Electronics Control) specification. Linked operations with HDMI CEC compatible devices made by other companies are not guaranteed.
• The camera supports “VIERA Link Ver.5”. “VIERA Link Ver.5” is the standard for Panasonic’s VIERA Link compatible devices. This standard is compatible with Panasonic’s conventional VIERA Link devices.
• Operation using the buttons on the camera will be limited.
Importing Images to a PC

After connecting to the PC, you can copy the recorded images by dragging files and folders on this camera to the PC.

1. Connect the camera and PC with the USB connection cable. (USB port: 689)
2. Press ▲▼ to select [PC(Storage)] and then pressolith or .
   - Windows: A drive (“LUMIX”) is displayed in [This PC].
   - Mac: A drive (“LUMIX”) is displayed on the desktop.
3. Drag the files and folders from the camera to the PC.

• The camera can be connected to a PC running any of the following OSs which can detect mass storage devices.

  Supported OS
  Windows: Windows 10
  Mac: macOS 10.13, 10.14, 10.15.3 to 10.15.7, 11.0 to 11.2

• You can use software to perform operations such as organizing and correcting recorded images, processing RAW images, and editing videos. (Installing Software: 696)

• Supported by “Final Cut Pro X”.
  For details on “Final Cut Pro X”, please contact Apple Inc.
### Folder Structure Inside Card

- **LUMIX**
  - **AD_LUMIX**
    - (A) The camera's setup information
  - **STREAM**
    - (B) Streaming Settings
  - **DCIM**
    - (C) Images
    - (D) Folder number
    - (E) JPG: JPEG format pictures
      - RW2: RAW format pictures
      - MP4: MP4 videos, 6K/4K burst files
      - MOV: MOV videos
    - (F) File number
    - (G) Color space
      - P: sRGB
      - _: AdobeRGB

**Notes:**

- If [USB Mode] is set to [PC(Storage)] in the [Setup] ([IN/OUT]) menu, the camera will be automatically connected to the PC without the [USB Mode] selection screen being displayed. (⇒[USB]: 589)
- Take care not to turn off the camera while images are being imported.
- After importing of the images is completed, perform the operation to safely remove the USB connection cable on the PC.
- Turn off the camera and disconnect the USB connection cable before removing the card from the camera. Otherwise, the recorded data may be damaged.
Installing Software

Install the software to perform operations such as organizing and correcting recorded images, processing RAW images, and editing videos.

- To download the software, your PC needs to be able to connect to the internet.
- Supported OSs are current as of May 2021 and are subject to change.

△ SILKYPIC Developer Studio SE

This software processes and edits RAW images. Edited images can be saved in a format (JPEG, TIFF, etc.) that can be displayed on a PC.

Check the following site and then download and install the software:
http://www.isl.co.jp/SILKYPIC/english/p/

Operating environment

- Supported OS
  - Windows: Windows 10, Windows 8.1 (64-bit recommended)
  - Mac: macOS 10.13 to macOS 10.15, macOS 11

- For more information such as how to use “SILKYPIC Developer Studio”, refer to the Help or the Ichikawa Soft Laboratory’s support site.
30-Day Full Trial Version of “LoiLoScope”
This software allows you to easily edit videos.

Check the following site and then download and install the software:
http://loilo.tv/product/20

Operating environment
* Supported OS
  Windows: Windows 10, Windows 8.1, Windows 8

* You can download a trial version that can be used for free for 30 days.
* For more information on how to use “LoiLoScope”, refer to the “LoiLoScope” manual available for download at the site.
* “LoiLoScope” is not available for Mac.
Storing on a Recorder

By connecting the camera to a Panasonic Blu-ray disc recorder or DVD recorder, you can store the pictures and videos.

Getting started:
• Turn on the camera and recorder.
• Insert a card into card slot 1.

1 Connect the camera and recorder with the USB connection cable. (USB port: 689)
2 Press ▲▼ to select [PC(Storage)] and then press 📷 or 🎬.
3 Operate the recorder to store the images.

• If [USB Mode] is set to [PC(Storage)] in the [Setup] ([IN/OUT]) menu, the camera will be automatically connected to the recorder without the [USB Mode] selection screen being displayed. (USB: 589)
• Take care not to turn off the camera while storage is in progress.
• Images such as 4K videos may not be supported depending on your recorder.
• Turn off the camera and disconnect the USB connection cable before removing the card from the camera. Otherwise, the recorded data may be damaged.
• For the storage and playback procedures, refer to the operating instructions for the recorder.
Tethered Recording

- **Installing Software:** 700
- **Operating the Camera from a PC:** 701

If you install the “LUMIX Tether” camera control software on your PC, you can connect the camera to the PC via USB and then control the camera from the PC and record while checking the live view on the PC screen (tethered recording). In addition, you can output via HDMI to an external monitor or TV during tethered recording.
Installing Software

“LUMIX Tether”
This software is for controlling the camera from a PC. It allows you to change various settings and to record remotely and then save the images to the PC.

Check the following site and then download and install the software:
https://panasonic.jp/support/global/cs/soft/download/d_lumixtether.html (English only)

Operating environment
- Supported OS
  Windows: Windows 10 (64 bit)
  Mac: macOS 10.13, 10.14, 10.15.3 to 10.15.7, 11.0 to 11.2
- Interface
  USB port (SuperSpeed USB (USB 3.1))

• Supported OSs are current as of May 2021 and are subject to change.
• To download the software, your PC needs to be able to connect to the internet.
• For how to operate the software, refer to the operation guide for “LUMIX Tether”.

700
### Operating the Camera from a PC

**Getting started:**

- Turn on the camera and PC.
- Install “LUMIX Tether” on PC.

1. **Connect the camera and PC with the USB connection cable.** (⇒ **USB port: 689**)

2. **Press ▲▼ to select [PC(Tether)] and then press ◄ or ◄.**
   - [✿] is displayed on the camera’s screen.

3. **Use “LUMIX Tether” to operate the camera from the PC.**

   - If [USB Mode] is set to [PC(Tether)] in the [Setup] ([IN/OUT]) menu, the camera will be automatically connected to the PC without the [USB Mode] selection screen being displayed. (⇒ **[USB Mode]: 589**)
   - The Wi-Fi/Bluetooth functions are not available while there is a PC connection with [PC(Tether)].
17. Connecting to Other Devices – Printing

Printing

If you connect the camera to a printer that supports PictBridge, you can select pictures on the camera’s monitor and then print them.

Getting started:
• Turn on the camera and printer.
• Set the print quality and other settings on the printer.

1 Play back the card that contains the picture you want to print.
• Press [ ].
• After pressing [ ], press ▲▼ to select [Card Slot 1] or [Card Slot 2], and then press ◀ or ▶.
• The card for printing cannot be changed after connecting to the printer.

2 Connect the camera and printer with the USB connection cable. (USB port: 689)

3 Press ▲▼ to select [PictBridge(PTP)] and then press ◀ or ▶.
4 Press △▼ to select a picture and then press ◀ or ◁.
   • To print multiple pictures, press ▲, set the picture selection method, and then select pictures.

   ![Multi Select]

   [Multi Select]
   Selects the picture to print.
   1 Press ▲▼◄► to select a picture and then press ◀ or ◁.
   • To cancel the setting, press ◀ or ◁ again.
   2 Press [DISP.] to end selection.

   ![Select All]

   [Select All]
   Prints all the stored pictures.

   ![Rating]

   [Rating]
   Prints all pictures with [Rating] levels from [★1] to [★5].

5 Set the print settings.

   ![Print Settings]

   - Print start
   - Print with Date
   - Number of prints
   - Paper Size
   - Page Layout
6 Start printing.

- Select [Print start] and then press 📷 or 📷.

<table>

</tbody>
</table>
If [USB Mode] is set to [PictBridge(PTP)] in the [Setup] ([IN/OUT]) menu, the camera will be automatically connected to the printer without the [USB Mode] selection screen being displayed. (USB: 589)

• Take care not to turn off the camera while printing is in progress.
• When connecting with the printer is not possible, set [USB Power Supply] to [OFF] and then try connecting again. (USB: 589)
• Do not disconnect the USB connection cable while [ ] (Cable disconnect prohibit icon) is displayed.
• Disconnect the USB connection cable after printing.
• Turn off the camera and disconnect the USB connection cable before removing the card from the camera. Otherwise, the recorded data may be damaged.
• To print images with paper size and layout settings not supported by the camera, set the [Paper Size] and [Page Layout] to [ ] and then select the desired settings on the printer.
  (For details, refer to the operating instructions for your printer.)
• If a yellow [¥] is displayed, the camera is receiving an error message from the printer. Check that there is no problem with the printer.
• If the number of prints is high, the pictures may be printed in batches. In this case, the remaining number of prints indicated may differ from the number set.
• RAW images cannot be printed.
• Images recorded with the following functions cannot be printed:
  – Video recording/[6K/4K PHOTO]/[Post-Focus]

\(^1\) Supplied with an AC adaptor, an AC cable and a USB connection cable. (Charging time: approx. 175 min)

\(^2\) The AC Adaptor (optional) can only be used with the designated Panasonic DC Coupler (optional).

\(^3\) The AC Adaptor (optional) cannot be used by itself.

* Use if the attached lens is in contact with the tripod pedestal.
18. Materials – Digital Camera Accessory System

- Some optional accessories may not be available in some countries.
- For lens-related optional accessories such as compatible lenses and filters, refer to our catalogs/web pages, etc.
- For the latest information on optional accessories, refer to our catalogs/web pages, etc.
Using Optional Accessories

- Battery Grip (Optional): 709
- Shutter Remote Control (Optional): 711
- Tripod Grip (Optional): 712
- AC Adaptor (Optional)/DC Coupler (Optional): 713

- For information on the external flash (⇒ Using an External Flash (Optional): 304)
- For information on the external microphone (⇒ External Microphones (Optional): 436)
- For information on the XLR Microphone Adaptor (⇒ XLR Microphone Adaptor (Optional): 439)
- Some optional accessories may not be available in some countries.

**Battery Grip (Optional)**

When mounted on the camera, the Battery Grip (DMW-BGGH5: optional) improves ease of operation and grip when the camera is held vertically. Also, inserting a battery (DMW-BLK22) into the Battery Grip provides a stable supply of power even for long periods of recording.
Selecting Battery Usage Priority

Selects which battery to use first when the batteries are installed in both the camera and the Battery Grip.

Getting started:
• Turn the camera off, and remove the cover for the battery grip connector.
1 Attach the Battery Grip to the camera.
2 Turn on the camera.
3 Set the battery use priority.
   • [Battery Use Priority]

[BODY]
The battery in the camera is used first.

[BG]
The battery in the Battery Grip is used first.

• When the battery in the Battery Grip is used, [Battery Use Priority] is displayed on the monitor.
• You can register functions of your choice to the [Fn] button on the Battery Grip. (Fn Buttons: 471)
  The [WB] button, [ISO] button, [ ] button and joystick each work the same as the buttons and joystick on the camera body.
• The [AF/AE LOCK] button on the Battery Grip works the same as the [AF ON] button on the camera body.
• You can also use DMW-BLF19 (optional), but since it has a smaller battery capacity than DMW-BLK22, it is recommended to use DMW-BLK22.
• Refer to the operating instructions for the Battery Grip for details.
Shutter Remote Control (Optional)

You can connect the Shutter Remote Control (DMW-RS2: optional) to use the camera as follows:

• Fully pressing the shutter button without camera shake
• Securing the shutter button during bulb recording and burst recording
• Start/end the video recording
• Using the functions registered in the video rec. button of the Shutter Remote Control

Registering Functions to the Video Rec. Button

You can register a favorite function to the video rec. button on a Shutter Remote Control.

The functions that can be registered are the same as the functions that can be registered to the Fn buttons for recording. ([Setting Items ([Fn Button Set]/[Setting in REC mode]): 477])

[Video Record] is registered in the default setting.

Select [Video Rec. Button (Remote)]
• Register functions using the same operations as [Fn Button Set]. ([Fn Buttons: 471])
18. Materials – Using Optional Accessories

**Tripod Grip (Optional)**

Attach a Tripod Grip (DMW-SHGR1: optional) to use it as a grip for recording while walking, a tripod, or a Shutter Remote Control.

- Connect the grip cable to the [REMOTE] socket on the camera.

**Always use a genuine Panasonic Shutter Remote Control (DMW-RS2: optional).**
**Refer to the operating instructions for the Shutter Remote Control for details.**

**Always use a genuine Panasonic Tripod Grip (DMW-SHGR1: optional).**
**The [Video Rec. Button (Remote)] menu does not work with the Tripod Grip.**
**Do not carry just by holding the hand strap when the camera is attached.**
**For details, refer to the operating instructions for the Tripod Grip.**
AC Adaptor (Optional)/DC Coupler (Optional)

With an AC Adaptor (DMW-AC10: optional) and DC Coupler (DMW-DCC17: optional), you can perform recording and playback without worrying about the remaining battery charge.

- Be sure to purchase both an AC Adaptor and a DC Coupler as a set. They cannot be used independently of one another.
- When the DC Coupler is being mounted, the DC Coupler cover opens, so the structure ceases to be dust and splash resistant. Do not allow sand, dust and water droplets to adhere to or enter the camera. After use, confirm that no foreign objects are adhering to the DC Coupler cover, then firmly close the cover.
- For details, refer to the operating instructions for the AC Adaptor and DC Coupler.
Monitor/Viewfinder Displays

- Recording Screen: 714
- Playback Screen: 728

The screen is an monitor display example of when [LVF/Monitor Disp] is set to [LVF].

Message Displays

Meanings of main messages displayed on the camera screen, and response methods.

❖ Card

[Memory Card Error]/[Format this card?]
• It is a format that cannot be used with the camera.
  Either insert another card, or back up any necessary data before formatting.
  (Formating Cards (Initialization): 62)

[Memory Card Error]/[This memory card cannot be used]
• Use a card compatible with the camera. (Memory Cards That Can Be Used: 25)

[Insert memory card again.]/[Try another card]
• Unable to access the card. Reinsert the card.
  • Insert a different card.

[Read Error]/[Write Error]/[Please check the card]
• Failure to read or write data.
  Turn off the camera, reinsert the card, and then turn it on again.
• The card may be broken.
  • Insert a different card.
[Recording was cancelled due to the limitation of the writing speed of the card]

- The card does not meet the writing speed requirements for recording. Use a card of a supported Speed Class. (Memory Cards That Can Be Used: 25)
- If the recording stops even when you are using a card that meets the specified Speed Class rating, the data writing speed of the card is getting slow. We recommend backing up data, and formatting. (Formatting Cards (Initialization): 62)

- **Lens**

[The lens is not attached properly. Do not push lens release button while lens is attached.]

- Remove the lens once, and then attach it again without pressing the lens release button. (Attaching a Lens: 63)
  
  Turn on the camera again, and if it is still displaying, contact the dealer.

[Lens attachment failed. Please make sure the lens is attached correctly.]

- Remove the lens from the camera body and gently wipe the contacts on the lens and the camera body using a dry cotton swab. Attach the lens, turn on the camera again, and if it is still displaying, contact the dealer.
18. Materials – Message Displays

❖ Battery

[This battery cannot be used]
• Use a genuine Panasonic battery.
  If this message is displayed even when a genuine Panasonic battery is used, contact the dealer.
• If the terminal of the battery is dirty, remove the dirt and dust from the terminal.

[The life span of this battery installed in the camera is starting to decline and should be considered for replacement. To maintain reliability refrain from using this battery.]
• The battery in the camera body has deteriorated. Try not to use that battery.

❖ Others

[Some pictures cannot be deleted]/[This picture cannot be deleted]
• Images that do not comply with the DCF standard cannot be deleted.
  Back up any necessary data before formatting the card. (ıp Formatting Cards ( Initialization): 62)

[A folder cannot be created]
• The maximum number of folder numbers has been reached, so new folders cannot be created.
  After formatting the card, execute [File Number Reset] in the [Setup] ([Card/File]) menu. (ıp [File Number Reset]: 123)

[Please turn camera off and then on again]/[System Error]
• Turn off and on the camera.
  If the message is displayed even when doing this several times, contact the dealer.
Troubleshooting

- Power, Battery: 736
- Recording: 737
- Video: 742
- Playback: 743
- Monitor/Viewfinder: 744
- Flash: 744
- Wi-Fi Function: 745
- TV, PC, Printer: 748
- Others: 749

First, try out the following procedures.

If the problem is not resolved, it may be improved by selecting [Reset] (→ [Reset]: 100) on the [Setup] ([Setting]) menu.

**Power, Battery**

**The camera turns off automatically.**

- [Power Save Mode] is enabled. (→ [Power Save Mode]: 57)

**The battery becomes flat too quickly.**

- When [6K/4K Pre-Burst] or [Pre-Burst Recording] is set, the battery drains faster. Set these settings only when recording.
- When connected to Wi-Fi, the battery drains quickly. Turn the camera off frequently such as by using [Power Save Mode] (→ [Power Save Mode]: 57).
Recording

Recording stops before finishing. Cannot record. Cannot use some functions.

- In high ambient temperatures or if the camera is continuously used for High-definition video recording, high-speed burst pictures, and HDMI output etc., the temperature of the camera will rise.
  
  If the camera temperature rises, [ ] will be displayed blinking on the screen.
  
  If you continue to use the camera, a message indicating the camera cannot be used is displayed on the screen and recording or HDMI output stops.
  
  Wait until the camera cools down.

Cannot record images. The shutter will not operate immediately when the shutter button is pressed.

- If [Focus/Shutter Priority] is set to [FOCUS], then recording will not take place until focus is achieved. ( [Focus/Shutter Priority]: 553)

The recorded image is whitish.

- Images may look whitish when the lens or image sensor gets dirty with fingerprints or similar.
  
  If the lens is dirty, turn the camera off, then wipe the lens surface with a soft, dry cloth.
  
  For information about how to clean the image sensor ( [Dirt on the Image Sensor]: 752)
18. Materials – Troubleshooting

**The recorded image is too bright or dark.**

• Ensure AE Lock is not set where it is not appropriate. (➔ Locking Focus and Exposure (AF/AE Lock): 271)

**Multiple images are recorded at once.**

• When drive mode is set to [ ] (Burst Shot), pressing and holding the shutter button will take burst pictures. (➔ Selecting the Drive Mode: 182)
• When [Bracketing] is set, then pressing the shutter button records multiple images while automatically changing the settings. (➔ Bracket Recording: 231)

**The subject is not focused properly.**

• Confirm the following details:
  – Is the subject outside of the focus range?
  – Is [Shutter AF] set to [OFF]? (➔ [Shutter AF]: 556)
  – Is [Focus/Shutter Priority] set to [RELEASE]? (➔ [Focus/Shutter Priority]: 553)
  – Is AF Lock (➔ Locking Focus and Exposure (AF/AE Lock): 271) set where it is not appropriate?

**The recorded image is blurred. The image stabilizer is not effective.**

• The shutter speed will become slower and the image stabilizer function may not work properly when recording in dark places.
  In these cases, use a tripod and the self-timer when recording.
The recorded image looks rough. Noise appears on the picture.

- Try the following:
  - Reduce the ISO sensitivity. (ISO Sensitivity: 273)
  - Increase [Noise Reduction] of [Photo Style] to the positive direction, or adjust each item other than [Noise Reduction] to the negative direction. (Adjusting Image Quality: 288)
  - Set [Long Exposure NR] to [ON]. ([Long Exposure NR]: 519)
- When using the camera continuously, the temperature inside of the camera rises and the image quality may deteriorate.
  Turning the camera off except when recording is recommended.

The subject appears distorted on the image.

- When a moving subject is recorded while using the following functions, the subject may appear distorted in the picture:
  - [ELEC.]
  - Video recording
  - [6K/4K PHOTO]

This is a characteristic of the MOS sensor that is the image sensor of the camera, and is not a malfunction.
18. Materials – Troubleshooting

**Striping or flicker may appear under lighting such as fluorescent or LED lighting.**

- This is characteristic of MOS sensors which serve as the camera’s pickup sensors. This is not a malfunction.
- When using the electronic shutter ([Shutter Type]: 240), lowering the shutter speed may reduce the effect of the horizontal stripes.
- If flicker or horizontal stripes are noticeable when recording video, this can be mitigated by fixing the shutter speed. Either set [Flicker Decrease (Video)] ([Flicker Decrease (Video)]: 535), or fix the shutter speed with the [M] mode ([Creative Video Mode: 330]).

**Stripes appear in high ISO sensitivity.**

- Stripes may appear in high ISO sensitivity or depending on the lens you use. Decrease the ISO sensitivity. ([ISO Sensitivity: 273])
The brightness or coloring of the recorded image is different from the actual scene.

- When recording under lighting such as fluorescent or LED lighting, increasing the shutter speed may introduce slight changes to brightness or coloring. These are a result of the characteristics of the light source and do not indicate a malfunction.
- When recording subjects in extremely bright locations or recording under lighting such as fluorescent, LED, mercury, or sodium lighting, the coloring or screen brightness may change or horizontal striping may appear on the screen.

Bright spot not in subject is recorded.

- Pixels may be missing from the image sensor. Perform [Pixel Refresh]. (→[Pixel Refresh]: 595)
18. Materials – Troubleshooting

### Video

**Cannot record videos.**
- When using a large capacity card, you may not be able to record for a while after turning on the camera.

**Video recording stops in the middle.**
- Recording video requires a card of a supported Speed Class. Use a compatible card. ([Memory Cards That Can Be Used: 25](#))

**In videos, abnormal clicking and buzzing sounds are recorded.**
- The recorded audio is very quiet.
  - Depending on the recording conditions or the lens used, the sound of aperture and focus actions may be recorded in videos.
  - You can set the focus operation during video recording to [OFF] in [Continuous AF] ([Continuous AF: 354](#)).
  - Do not block the microphone hole during video recording.

**An operation sound is recorded in a video.**
- We recommend setting the [P](#) mode and recording with touch operation if you are bothered about the operation sounds during recording. ([Operations During Video Recording: 33](#))
Playback

**Cannot playback. There are no recorded pictures.**

- Folders and images processed on a PC cannot be played on the camera.
- Some images are not displayed when the [Playback Mode] is set. Set to [Normal Play]. ([Playback Mode]: 599)
- Videos recorded with a different [System Frequency] setting cannot be played back. Return the [System Frequency] setting to the one you used during the recording. ([System Frequency]: 336)
Monitor/Viewfinder

The monitor/viewfinder turns off when the camera is turned on.

• If no operations are performed during the set time period, [Auto LVF/Monitor Off] ([Auto LVF/Monitor Off]: 57) is activated, and the monitor/viewfinder turns off.
• When an object or your hand is positioned near the eye sensor, the monitor display may switch to the viewfinder display.

It may flicker for an instant or the brightness of the screen may change significantly for an instant.

• This occurs when the shutter button is pressed halfway, or when the subject brightness changes, making the lens aperture change.
This is not a malfunction.

Unevenly bright parts or irregular colors appear on the viewfinder.

• The viewfinder of the camera is built with OLED components. Screen burn-in may occur on the screen/viewfinder when a same image is displayed for a long period of time, but it does not affect the recorded images.

Flash

The flash does not fire.

• The flash does not fire when using the following functions:
  – Video recording/[6K/4K PHOTO]/[Post-Focus]
  – [ELEC.]/[Silent Mode]
  – [Filter Settings]
## Wi-Fi Function

A Wi-Fi connection cannot be established. Radio waves get disconnected. Wireless access point is not displayed.

### General tips for using a Wi-Fi connection
- Use within the communication range of the device to be connected.
- Usage near devices that utilize the 2.4 GHz frequency such as microwave ovens and cordless telephones may result in the radio wave being lost. Use the camera at a sufficient distance from these devices.
- When the remaining battery level is low, it may not be possible to connect to or maintain communication with other devices. (A message such as [Communication error] is displayed.)
- If you place the camera on a metal table or shelf, the radio waves may be adversely affected. In such cases, you may not be able to establish a connection. Move the camera away from the metal surface.

### Wireless access point
- Confirm that the connected wireless access point can be used.
- Confirm the radio wave conditions of the wireless access point.
  - Move the camera closer to the wireless access point.
  - Change the location and angle of the wireless access point.
- Depending on the wireless access point, the radio wave may not be displayed even though it is present.
  - Turn off and then on the wireless access point.
  - If the wireless channel of the wireless access point cannot be set automatically, manually set the channel supported by the camera.
  - If the wireless access point SSID is set not to broadcast, it may not be detected. Enter the SSID, and then connect. ([Connecting by Manual Input: 665](#))
- Depending on the wireless access point, connection may be automatically disconnected after specific time has passed. Reconnect the connection again.
18. Materials – Troubleshooting

Cannot connect with a wireless access point.
• The wireless access point information set on the camera is wrong.
  Check the authentication type and encryption key. (Connecting by Manual Input: 665)
• Radio waves from other devices may block the connection to a wireless access point.
  Check the status of other devices that are connected to the wireless access point as well as the status of other wireless devices.

Wi-Fi connection on an iOS device fails.
• Follow the message displayed to allow connection to the camera.
  If you still cannot connect, select the SSID of the camera on the Wi-Fi setup screen of the smartphone to connect.
  If the SSID is not displayed, turn off and on the camera, then perform the connection settings again.

Wi-Fi connection with a smartphone is not possible.
• Change the access point to connect to in the smartphone Wi-Fi settings to the camera.

When trying to connect to a PC by Wi-Fi, this does not recognize the user name and password, and connection is not possible.
• Depending on the version of the OS, there are two types of user account (local account/Microsoft account).
  Ensure you use the local account user name and password.
The PC is not recognized when I use a Wi-Fi connection. The camera cannot be connected to the PC using the Wi-Fi function.

• At the time of purchase, this camera is set to use a workgroup name of "WORKGROUP". If you have changed the workgroup name of the PC, this will not be recognized. In the [Wi-Fi Setup] menu, [PC Connection], change the workgroup name of the PC to which to connect. (⇒[PC Connection]: 674)

• Check that the login name and password are correctly typed.

• When the clock settings of the PC connected to the camera differs considerably from those of the camera, the camera cannot be connected to the PC depending on the OS.

I have forgotten the password for the Wi-Fi.

• In the [Setup] ([Setting]) menu, [Reset], reset network settings. (⇒[Reset]: 100)

However, all information set in [Wi-Fi Setup] and [Bluetooth] will also be reset.
### TV, PC, Printer

#### The TV images are displayed with gray bands.
- Depending on the [Aspect Ratio], gray bands may be displayed on the top and bottom or the left and right of the images. You can change the band color in [Background Color(Playback)] in [HDMI Connection] of the [Setup] ([IN/OUT]) menu. ([HDMI Connection]: 590)

#### Images cannot be imported even when connected to a PC.
- Set the [USB Mode] of the camera to [PC(Storage)]. ([USB]: 589)
- Turn the camera off and on.

#### Cannot print when the camera is connected to a printer.
- Pictures cannot be printed using a printer that does not support PictBridge.
- Set the camera’s [USB Mode] to [PictBridge(PTP)]. ([USB]: 589)
Others

When the camera is shaken, a rattling sound is heard from the camera.

• The sound is caused by the in-body stabilizer. This is not a malfunction.

There is rattling noise from the lens when the camera is turned on or off, or when the camera is swung. There is a sound from the lens when recording.

• This is the sound of the lens moving and aperture operation. It is not a malfunction.

An unreadable language was selected by mistake.

• Reselect the language from the menu using the following procedure:
  [Language] ➜ [Language] ➜ [Language] ➜ [Language] ➜ Select desired language (⇒ Language: 596)

The camera becomes warm.

• The camera surface and back of the monitor may become warm during use, but this does not indicate a problem with performance or quality.
Cautions for Use

- The camera

Keep this unit as far away as possible from electromagnetic equipment (such as microwave ovens, TVs, video games etc.).

- If you use this unit on top of or near a TV, the pictures and/or sound on this unit may be disrupted by electromagnetic wave radiation.
- Do not use this unit near cell phones because doing so may result in noise adversely affecting the pictures and/or sound.
- Recorded data may be damaged, or pictures may be distorted, by strong magnetic fields created by speakers or large motors.
- Electromagnetic wave radiation may adversely affect this unit, disturbing the pictures and/or sound.
- If this unit is adversely affected by electromagnetic equipment and stops functioning properly, turn this unit off and remove the battery or disconnect AC adaptor. Then reinsert the battery or reconnect AC adaptor and turn this unit on.

Do not use this unit near radio transmitters or high-voltage lines.

- If you record near radio transmitters or high-voltage lines, the recorded pictures and/or sound may be adversely affected.

Always use the supplied cords and cables.
If you use optional accessories, use the cords and the cables supplied with them.
Do not extend the cords or the cables.

Do not keep objects such as credit cards that may be influenced magnetically close to this unit.
The data on these objects may become corrupted and unusable.
Do not spray the camera with insecticides or volatile chemicals.  
• If the camera is sprayed with such chemicals, the body of the camera may be damaged and the surface finish may peel off.

Do not keep products made of rubber, PVC or similar materials in contact with the camera for a long period of time.

❖ When using in cold places or at low temperatures
• Skin burns may result if you leave the metal parts of the camera in direct contact with the skin for long periods of time at cold places (environments with temperatures at or below 0 °C (32 °F), such as ski resorts or places at high altitude).

Use gloves or similar when using it for long periods.
• The performance of the battery (Number of pictures that can be taken/available recording time) may decrease temporarily at temperatures between –10 °C and 0 °C (14 °F and 32 °F).
Keep the battery warm as you are using by keeping it inside your cold weather gear or clothes. Battery performance will recover when the internal temperature rises again.
• The battery cannot be charged at temperatures below 0 °C (32 °F).
An error message is shown on the charger or on the camera body when charging is not possible.
  – When charging with the charger: The 50 % charged light blinks rapidly.
  – When charging in the camera body: The charging light blinks.
• If using in cold locations, do not allow water droplets and snow to remain on the camera.
If these are left on the camera, water may freeze in gaps in the camera on/off switch, speaker, and microphone, making these parts difficult to move, and/or leading to reduced volume. This is not a malfunction.
Cleaning
Before cleaning the camera, remove the battery or the DC Coupler, and disconnect the power plug from the electrical outlet. Then wipe the camera with a dry, soft cloth.
• When the camera is soiled badly, it can be cleaned by wiping the dirt off with a wrung wet cloth, and then with a dry cloth.
• Do not use solvents such as benzine, thinner, alcohol, kitchen detergents, etc., to clean the camera, since it may deteriorate the external case or the coating may peel off.
• When using a chemical cloth, be sure to follow the accompanying instructions.

Dirt on the Image Sensor
If dirt gets inside the mount when changing lenses, depending on the recording conditions, it may adhere to the image sensor and appear on the recorded picture.
To prevent debris or dust adhering to internal parts of the body, avoid changing the lens in a dusty environment and always fit the body cap or a lens when storing the camera.
Remove any dirt on the body cap before attaching it.

Dust reduction function
The camera has a dust reduction function that will blow off the dirt and dust that have affixed to the front of the image sensor.
If the dirt is particularly noticeable, from the [Setup] ([Others]) menu, perform [Sensor Cleaning]. (➔[Sensor Cleaning]: 595)
Removing dirt on the image sensor
The image sensor is very precise and delicate, so be sure to observe the following when you do have to clean it yourself.

- Blow dust off the surface of the image sensor using a commercially available blower.
  Do not blow the dust off with excessive power.
- Do not put the blower further inside than the lens mount.
  The blower can scratch the image sensor if it touches.
- Do not use any objects except a blower to clean the image sensor.
- If you cannot remove the dirt or dust with the blower, consult the dealer or Panasonic.

Cleaning the Viewfinder
If the viewfinder is dirty, then remove the eye cup and clean.
Blow dirt off the surface of the viewfinder using a commercially available blower, then lightly wipe with a soft, dry cloth.

- After cleaning, attach the eye cup.
- Be careful not to lose the eye cup.
Monitor/Viewfinder

- Do not push hard on the monitor. This may cause irregular coloration or malfunction.
- Extremely high precision technology is employed to produce the monitor/viewfinder screen. However, there may be some dark or bright spots, or spots that light constantly (red, blue, or green) on the screen. This is not a malfunction.
  Though the monitor/viewfinder screen parts are produced with highly controlled precision technology, some pixels may be inactive or always lit. The spots will not be recorded on images on a card.

Lens

- When using this lens, take care not to drop, bump, or apply undue force to it. Doing so may cause malfunction or damage to this lens and the digital camera.
- Do not aim the lens at the sun or strong light sources. The concentrated light may cause fire or damage.
- Images may be affected by dust, dirt, and soiling (water, oil, fingerprints, etc.) on the lens surface. Before and after recording, use a blower to blow off dust and dirt from the surface of the lens, then lightly wipe with a soft dry cloth to remove soiling.
- When the camera is not being used, attach the lens cap and lens rear cap to prevent dust and dirt from adhering to or entering the camera.
- To protect the lens contact points (A), do not do the following. These may cause a malfunction.
  - Touch the lens contact points.
  - Soil the lens contact points.
  - Place the lens with its mount surface facing down.
18. Materials – Cautions for Use

• To improve the dust and splash resistant performance of the interchangeable lens (H-ES12060/H-FS12060), a lens mount rubber is used in the mount.
  – The lens mount rubber will leave scuff marks on the digital camera mount, but this does not impact performance.
  – To replace the lens mount rubber, contact Panasonic.

❖ Battery

The battery is a rechargeable lithium ion battery.
It is highly sensitive to temperature and humidity, and the effect on performance increases as the temperature rises or drops.

Always remove the battery after use.
• Place the removed battery in a plastic bag, etc., and keep away from metallic objects (clips, etc.) for storage or transport.

If you drop the battery accidentally, check to see if the body of the battery and the contacts are deformed.
• Damage to the camera will result if a battery with deformed contacts is inserted into the camera.

Dispose of unusable battery.
• The battery has a limited life.
• Do not throw the battery into fire because it may cause an explosion.
18. Materials – Cautions for Use

Do not allow battery terminals to come into contact with metal objects (such as necklaces, hairpins, etc.).
• This can cause short-circuiting or heat generation and you may be badly burned if you touch a battery.

❖ Charger, AC Adaptor
• The charging lights may blink under the influence of static electricity or electromagnetic wave, depending on the charging environment. This phenomenon has no effects on charging.
• If you use the AC adaptor near a radio, the radio reception may be disturbed.
  Keep the AC adaptor 1 m (3.3 feet) or more away from radio.
• During usage, the AC adaptor may emit an electrical hum; this is not a malfunction.
• After use, be sure to disconnect the power plug from the electrical outlet.
  (A very small amount of current is consumed if it is left connected.)
• Keep the contacts (B) of the charger and battery clean.
  Wipe them with a dry cloth if they get dirty.

(B)
Card

Do not leave the card in areas with high temperatures, direct sunlight, or areas prone to electromagnetic waves and static.

Do not bend or drop the card.

Do not subject the card to strong vibration.

- Otherwise, the card and recorded data may be damaged.
- Put the card in the card case or the storage bag after use and when storing or carrying the card.
- Do not allow dirt, water or other foreign objects to get into the contacts on the card. Additionally, do not touch the contacts with your hands.
Personal Information

Personal information is stored within the camera and in recorded images. We recommend that you enhance security by setting a Wi-Fi password and Wi-Fi function lock to protect personal information. ([Wi-Fi Setup] Menu: 674)

- Images may contain information that can be used to identify the user, such as recording dates and times, and location information. Confirm details carefully before uploading images to a web service.

Disclaimer

- Information including personal information may be altered or vanish due to erroneous operation, effect of static electricity, accident, malfunction, repair, or other handleings.

Please note in advance that Panasonic is not liable in any way for any direct or indirect damage from the alteration or vanishing of information or personal information.

When requesting a repair or transferring/disposing of the camera

- After making a copy of personal information, be sure to delete information, including personal information, such as wireless LAN connection settings that you have registered or saved within the camera with [Reset] ([Reset]: 100).
- Reset the settings to protect the personal information. ([Reset]: 100)
- Remove the card from the camera.
- Settings may return to factory default when camera is repaired.
- Please contact the dealer where you purchased the camera or Panasonic if above operations are not possible due to malfunction.
Points to remember when disposing of/transferring the memory card

Format or delete using the camera or a PC will only modify the file management information, so it will not delete the data in the card completely. We recommend physically destroying the card or using commercially available PC data deletion software to delete the card data completely when disposing of/transferring the card.

You are responsible for handling of data on cards.

❖ When Not Using the Camera for a Long Period of Time

• Ensure you remove the battery and card from the camera. If the battery is left in the camera, it may over-discharge, and be rendered unusable even after charging.
• Store the battery in a cool and dry place with a relatively stable temperature. (Recommended temperature: 15 °C to 25 °C (59 °F to 77 °F); recommended humidity: 40 %RH to 60 %RH)
• If storing for a long period of time, it is recommended that the battery be charged once per year, fully drained in the camera, then removed from the camera and then stored again.
• We recommend storing the camera with a desiccant (silica gel) when you keep it in a closet or a cabinet.
• Check all the parts before recording when you have not used the camera for a long period of time.

❖ Image Data

• Recorded data may be damaged or lost if the camera breaks down due to inappropriate handling.

Panasonic will not be liable for any damage caused due to loss of recorded data.
18. Materials – Cautions for Use

**Tripod**

- Make sure the tripod is stable when the camera is attached to it.
- When using a tripod, removal of the battery may not be possible.
- When using this unit with a large-diameter lens, the lens may come into contact with the pedestal depending on the tripod. Tightening the screw with the lens and pedestal in contact with each other may damage this unit or the lens. Therefore it is recommended to attach the tripod adaptor (DMW-TA1: optional) before mounting on the tripod.
- Also refer to the operating instructions for the tripod.

**Shoulder Strap**

- If you attach a heavy interchangeable lens to the camera body, do not carry the camera by the shoulder strap. Hold the camera and the lens when carrying them.

**Wi-Fi Function**

*Use the camera as a wireless LAN device*

When using devices or computer systems that require more reliable security than wireless LAN devices, ensure that the appropriate measures are taken for safety designs and defects for the systems used. Panasonic will not take any responsibility for any damage that arises when using the camera for any purpose other than as a wireless LAN device.

*Use of the Wi-Fi function of the camera is presumed to be in countries where it is sold*

There is the risk that the camera violates the radio wave regulations if used in countries other than those where it is sold, and Panasonic takes no responsibility for any violations.
There is the risk that data sent and received via radio waves may be intercepted
Please note that there is the risk that data sent and received via radio waves may be intercepted by a third party.

Do not use the camera in areas with magnetic fields, static electricity or interference
• Do not use the camera in areas with magnetic fields, static electricity or interference, such as near microwave ovens. These may cause the interruption of the radio waves.
• Using the camera near devices such as microwave ovens or cordless telephones that use the 2.4 GHz radio wave band may cause a decrease in performance in both devices.

Do not connect to the wireless network you are not authorized to use
When using Wi-Fi, wireless networks (SSID) that you are not allowed to use may be displayed, but you should not connect to these as it may be viewed as unauthorized access.
Number of Pictures That Can Be Taken and Available Recording Time with the Battery

Listed below are the numbers of pictures that can be taken and the time lengths available for recording when the supplied battery is being used.

• The number of pictures that can be taken is according to the CIPA (Camera & Imaging Products Association) standards.
• Using a Panasonic UHS-II compatible SDXC memory card.
• The values listed are approximate.

❖ Recording Pictures (When Using the Monitor)

<table>
<thead>
<tr>
<th>When the interchangeable lens (H-ES12060) is used</th>

<td>Playback time (minutes): 250</td>
</tr>
</tbody>
</table>

* The number of pictures that can be taken and the available recording time vary depending on the surrounding environment and the usage conditions. For example, these will reduce in the following case:
  - In low-temperature environments, such as on ski slopes.
* If the usage duration drops significantly even when the battery is fully charged, then the battery is at the end of its service life. Replace with a new battery.
Number of Still Images That Can Be Taken and Video Recording Time with Cards

Listed below are the numbers of pictures and the time lengths of videos that can be recorded on a card.
• The values listed are approximate.

**Type**

- **Type**
  - Digital Single Lens Mirrorless camera
- **Recording media**
  - SD memory card / SDHC memory card*1 / SDXC memory card*1
  - *1 Compliant with UHS-I/UHS-II UHS Speed Class 3, UHS-II Video Speed Class 90
  - Double slot recording function is available.
- **Lens mount**
  - Micro Four Thirds mount

797
### Image sensor
- **Image sensor**
  4/3” Live MOS sensor, total pixel number 21,770,000 pixels, Primary color filter
- **Effective number of pixels of the camera**
  20,330,000 pixels

### Latitude
12 stops (V-Log L)

### Recording format for still images
- **File format for still images**
  JPEG (DCF compliant, Exif 2.31 compliant) / RAW
- **File format for 6K/4K photos**
  - 6K photo: MP4 (H.265/HEVC, AAC (2ch))
  - 4K photo: MP4 (H.264/MPEG-4 AVC, AAC (2ch))
- **Picture size (pixels)**
  **When the aspect ratio setting is [4:3]**

### Focus

- **AF type**
  TTL type based on image detection (Contrast AF)

- **Focus mode**
  AFS / AFC / MF

- **AF mode**
  Automatic detection (Face/Eye/Body/Animal) / Tracking / 225-Area / Zone (Vertical/Horizontal) / Zone (Square) / Zone (Oval) / 1-Area + Supplementary (Automatic detection possible) / 1-Area (Automatic detection possible) / Pinpoint / Custom1, 2, 3,
  Focus area selection is possible by touching or with the joystick

---

### Exposure control

- **Light metering system, Light metering mode**
  1728-zone metering, multi-metering / center-weighted metering / spot metering / highlight-weighted metering

- **Metering range**
  EV 0 to EV 18 (F2.0 lens, ISO100 conversion)

- **Exposure**
  Program AE (P) / Aperture-Priority AE (A) / Shutter-Priority AE (S) / Manual Exposure (M)

- **Exposure compensation**
  1/3 EV steps, ±5 EV

- **ISO sensitivity (standard output sensitivity)**
  AUTO / 200 to 25600,
  When [Extended ISO] is set: AUTO / 100 to 25600,
  1/3 EV steps
### White balance

- AWB / AWBc / AWBw / Daylight / Cloudy / Shade / Incandescent lights / Flash / White set 1, 2, 3, 4 / Color temperature 1, 2, 3, 4

### Shutter

- **Format**
  - Focal-plane shutter

- **Shutter speed**
  - **Pictures:**
    - Mechanical shutter: Bulb (max. approx. 30 minutes), 60 seconds to 1/8000 of a second
    - Electronic front curtain: Bulb (max. approx. 30 minutes), 60 seconds to 1/2000 of a second
    - Electronic shutter: Bulb (max. approx. 60 seconds), 60 seconds to 1/16000 of a second
  - **Videos:**
    - 1/25\(^*3\) of a second to 1/16000 of a second

\(^*3\) When [Exposure Mode] is set to [M] and focus mode is set to [MF], this can be set up to 1/2

- **Flash synchronization speed**
  - Equal to or smaller than 1/250 of a second
### Burst recording

- **Burst rate**
  - High speed (Mechanical shutter/Electronic front curtain): 12 frames/second ([AFS], [MF]), 9 frames/second ([AFC])
  - High speed (Electronic shutter): 12 frames/second ([AFS], [MF]), 7 frames/second ([AFC])
  - Medium speed: 7 frames/second
  - Low speed: 2 frames/second

- **Maximum number of frames recordable**
  - [FINE] / [STD.]: 999 frames or more
  - [RAW+FINE] / [RAW+STD.] / [RAW]: 108 frames or more

[When recording is performed under the test conditions specified by Panasonic (Using an UHS-II compatible card.).]

### Zoom

- **Extended Tele Conversion (Picture)**
  - Max. 2.0× (when a picture size of [S] is selected.)

### Microphone / Speaker

- **Microphone**
  - Stereo

- **Speaker**
  - Monaural
## Interface

- **USB**
  USB Type-C™, SuperSpeed USB3.1 GEN1, Supports USB Power Delivery (9.0 V/3.0 A)
- **[HDMI]**
  HDMI Type A
- **[REMOTE]**
  ⌀ 2.5 mm jack
- **[MIC]**
  ⌀ 3.5 mm stereo mini jack
- **Headphones**
  ⌀ 3.5 mm stereo mini jack
- **Flash Synchro**
  Yes

## Splash Resistant

Yes

## External dimensions / Mass

- **External dimensions**
  Approx. 138.5 mm (W)×98.1 mm (H)×87.4 mm (D)
  (5.45” (W)×3.86” (H)×3.44” (D))
  (excluding the projecting parts)
- **Mass (Weight)**
  Approx. 727 g/1.60 lb (camera body, with battery and one card)
  Approx. 647 g/1.43 lb (only camera body)
Operating environment

- **Recommended operating temperature**
  - 10 °C to 40 °C (14 °F to 104 °F)
  - Battery performance temporarily worsens at low temperatures (−10 °C to 0 °C (14 °F to 32 °F)), reducing the number of pictures that can be taken and the available recording time.

- **Permissible relative humidity**
  - 10 %RH to 80 %RH

Wi-Fi

- **Compliance standard**
  - IEEE 802.11a/b/g/n/ac (standard wireless LAN protocol)

- **Frequency range used (central frequency)**
  - Specifications vary depending on the country or area where the camera was purchased.
  - Refer to the “Operating Instructions <Quick Start Guide>” (supplied) for details.

- **Encryption method**
  - Wi-Fi compliant WPA™ / WPA2™

- **Access method**
  - Infrastructure mode

Bluetooth

- **Compliance standard**
  - Bluetooth v4.2, Bluetooth Low Energy (BLE)

- **Frequency range used (central frequency)**
  - 2402 MHz to 2480 MHz

- This camera complies with the “Design rule for Camera File system” (DCF) and “Exchangeable Image File Format” (Exif) standards established by “Japan Electronics and Information Technology Industries Association” (JEITA). The camera cannot play back files that do not comply with the DCF standard. Exif is a file format for pictures which allows recording information, etc. to be added.

Firmware Update

• Firmware Ver. 1.1: F-3

A firmware update has been made available to improve camera capabilities and to add functionality. The subsequent sections describe functions that have been added or modified.

- To check the firmware version of the camera, select [Firmware Version] in the [Setup] ([Others]) menu.
- For the latest information on the firmware or to download/update the firmware, visit the following support site:
  

(English only)
About Applications/Software

When you have updated the firmware for the camera, use the latest version of the application for your smartphone or the software for your PC.

“LUMIX Sync”
• Install or update the application on your smartphone.

“LUMIX Tether”
• Check the following site and then download and install the software:
(English only)
Firmware Ver. 1.1

- Support for Wired LAN Connection: F-4
- Connection Methods for Streaming (USB Tethering, Wired LAN) Have Been Added: F-8
- Support for "LUMIX Tether" Wired LAN Connections: F-19
- Precautions When Inserting a Battery into the Camera for Charging: F-25
- [Live View Composite] Has Been Added: F-26
- Rotational Angle to [Focus Ring Control] Has Been Added: F-30
- Added Menus: F-31
Support for Wired LAN Connection

- Menu Added: F-5

It is now possible to connect to a wired network with a LAN cable by connecting a commercially available USB ethernet adaptor to the USB port on the camera.

(A) USB port
(B) USB ethernet adaptor (commercially available)
(C) LAN cable

- For information about USB ethernet adaptors whose operation has been verified with this camera, check the following support site. (As of November 2021)
  (English only)
- For information about operation methods for streaming with the wired LAN connection
  (☞ Connection Methods for Streaming (USB Tethering, Wired LAN) Have Been Added: F-8)
- For information about operation methods for “LUMIX Tether” with the wired LAN connection
  (☞ Support for “LUMIX Tether” Wired LAN Connections: F-19)
Menu Added

A menu has been added to the [Wi-Fi Setup] menu for the wired LAN connection, and the [Wi-Fi Setup] menu has become [LAN / Wi-Fi Setup].

Firmware 1.0

[ ] ➔ [ ] ➔ [Wi-Fi] ➔ [Wi-Fi Function]/[Wi-Fi Setup]/[Streaming Setup] ¹

Firmware 1.1

[ ] ➔ [ ] ➔ [LAN / Wi-Fi] ➔ [Wi-Fi Function]/[LAN / Wi-Fi Setup]

¹ The streaming setup menu has been moved by a firmware update.

[ ] ➔ [ ] ➔ [ ] ➔ [Streaming]  
(⇒ Connection Methods for Streaming (USB Tethering, Wired LAN) Have Been Added: F-8)
### [LAN / Wi-Fi Setup]

</tbody>
</table>

**[LAN / Wi-Fi Function Lock]**

[Wi-Fi Function Lock] has been changed to [LAN / Wi-Fi Function Lock] by the firmware update. Along with the Wi-Fi function, use of the wired LAN function is protected by a password. (<Wi-Fi Function Lock>: 675)

**[Network Address Display (LAN)]**
Displays the MAC address and IP address of the camera when connecting via wired LAN.

**[Network Address Display (Wi-Fi)]**
Displays the MAC address and IP address of the camera when connecting via Wi-Fi.
Connection Methods for Streaming (USB Tethering, Wired LAN) Have Been Added

- Menu Changes: F-8
- Image Qualities in [Streaming Quality] Have Been Added: F-11
- Using the Streaming Function with USB Tethering Connections: F-14
- Using the Streaming Function with Wired LAN Connections (IP Streaming (RTP/RTSP)): F-17

It is now possible to use USB tethering or wired LAN connection for the streaming function.

Menu Changes

The menu name and position for the streaming menu have changed, and setting menus for USB tethering and wired LAN have been added.

Firmware 1.0

- [Wi-Fi] [Streaming Setup]

Firmware 1.1

- [Wi-Fi] [Streaming]
### [Streaming]*1

Firmware Ver. 1.1 – Connection Methods for Streaming (USB Tethering, Wired LAN) Have Been Added

*1 Can be assigned to [Fn Button Set] and [Q.MENU Settings].
*2 Displayed when [Streaming Method] is set to [Direct].
*3 Displayed when [Streaming Method] is set to [Via PC Software].
*4 Displayed when [Connection Method] is set to [Wi-Fi].

**[Streaming Setup]**

- **[Streaming Quality]** ([Image Qualities in [Streaming Quality] Have Been Added: F-11])
- **[RTSP Port]**: Set the RTSP port number. [CHANGE]: Change to any number. (Up to 65535) [DEFAULT]: Set to the default setting (554).
  - The following numbers cannot be set: 0 to 553, 555 to 1023, 1900, 10669, 10670, 15740, 50001, and 60606
- **[Streaming Address]** ([Streaming Address]: 682)
- **[Save/Load Streaming Address]** ([Save/Load Streaming Address]: 683)
- **[Wi-Fi Connection Setting]** ([Wi-Fi Connection Setting]: 684)

**When the streaming function is not to be used, set [Streaming Function] to [OFF].**

When set to [ON], if the [Connection Method] is set to [USB Tethering] or [LAN], power is supplied from the battery of this camera to the connected device, so the battery will be consumed faster.

- The communication speed depends on the internet connection and the handset, so we recommend that you perform streaming tests beforehand.
- Refer to the "16. Streaming Function" chapter for notes about when the streaming function is being used. ([Streaming Function: 676])
Image Qualities in [Streaming Quality] Have Been Added

The H.265 (4K/FHD) and H.264 (4K) streaming image qualities have been added.
The items you can set depend on the connection method.

- Set a streaming image quality (bit rate) appropriate to the communication speed of your internet connection.
Using the Streaming Function with USB Tethering Connections

It is possible to live stream from locations where a router is not available, when you are out and about for example, by connecting the camera to the internet via the mobile data communication (4G/5G, etc.) on your smartphone.

(A) USB port
(B) USB connection cable (commercially available)

- For information about the tethering function of your smartphone, refer to the operating instructions of the smartphone and the contract you have with the cell-phone provider. Depending on the contract you have, there may be limitations on tethering or it may incur large additional charges.
- The NETWORK connection lamp does not light when connected to the internet via USB tethering.
Firmware Ver. 1.1 – Connection Methods for Streaming (USB Tethering, Wired LAN) Have Been Added

Getting started:
- Confirm that the camera and the smartphone are not connected.

1. Set the mode dial to [ ].

2. Set the menu on the camera.
   - [ ] [ ] [ ] [ ] [ ]
     1. In [Streaming Method], select [Direct], and set [Connection Method] to [USB Tethering].
     2. In [Streaming Setup], set [Streaming Quality] and the streaming destination.
        - How to set the streaming destination (Stream by Operating the Camera: 679)
          Read Steps 1 to 3-2.
     3. Set [Streaming Function] to [ON].

- You can also perform streaming settings by using Bluetooth to connect a smartphone on which the smartphone app “LUMIX Sync” is installed and the camera.
  1. In the “LUMIX Sync” home screen, select [Others] [ ] [Live streaming] [ ] video sharing website or [Stream with RTMP/RTMPS], and then select [USB Tethering] in [Connection Method].
  2. Set [Streaming Quality] and [Privacy settings].
  3. Select [Set to the camera].

- If the message [Unable to confirm security of the streaming address. Continue?] is displayed, check that the URL of the streaming destination is correct before continuing the connecting operation.
- [ ] is displayed on the recording screen.
3 Connect the camera and the smartphone using a USB connection cable.

4 Enable the USB tethering function on the smartphone.
   - Select [USB Tethering] (for Android devices) or [Personal Hotspot] (for iOS devices) on the smartphone.
   - If a confirmation message appears on the smartphone screen asking for permission to enable access by the connected device, grant permission. Connection is not complete until permission is given.
   - Please also refer to the operating instructions of your smartphone.

5 Start/end streaming.
   - Press the shutter button or video rec. button.
   - You can also perform the same operation by selecting [Start streaming]/[Stop streaming] in “LUMIX Sync”.
   - When streaming starts, [ ] is displayed on the recording screen.
   - Operations to start streaming may be needed on the video sharing website.

6 End the streaming function.
   - [ ] [ ] [ ] [ ] [ ] [ ] [ ] [ ] [OFF]
   - You can also perform the same operation by selecting [End streaming] in “LUMIX Sync”.

F-16
Using the Streaming Function with Wired LAN Connections (IP Streaming (RTP/RTSP))

You can perform live streaming with IP streaming (RTP/RTSP) by connecting a commercially available USB ethernet adaptor to the camera.

Getting started:
* Install the RTP/RTSP compatible streaming software onto your PC.

1. **Set the mode dial to 

2. **Set [IP Address Setting (LAN)] to the same network as the PC.
   
   - 
   
   - If you have modified settings in [IP Address Setting (LAN)], turn the camera off and on again.
3 Set up streaming settings on the camera.
   • [ ] ➔ [ ] ➔ [ ] ➔ [Streaming]
   1 In [Streaming Method], select [Via PC Software], and set [Connection Method] to [LAN].
   2 In [Streaming Setup], set [Streaming Quality] and [RTSP Port].
   3 Set [Streaming Function] to [ON].
     • [ ] is displayed on the recording screen.

4 Connect the commercially available USB ethernet adaptor to the camera, then use LAN cables to connect the camera and the PC to a router.

5 Use your streaming software to start/end streaming.
   • Set the URL as follows in your streaming software:
     rtsp://(IP address of this camera)/stream
   • If the [RTSP Port] has been changed from the default setting (554), set as follows:
     rtsp://(IP address of this camera):(RTSP port)/stream
   • When streaming starts, [ ] is displayed on the recording screen.
   • For details about operation methods, refer to the operating instructions of the streaming software.

   • While the IP streaming function is being used, you can connect “LUMIX Tether” with the wired LAN connection just by starting “LUMIX Tether”. You do not have to operate the camera.
   (The live view is not displayed on the “LUMIX Tether” screen during streaming.)
Support for “LUMIX Tether” Wired LAN Connections

- [Tether(USB ethernet adaptor)] Has Been Added: F-20
- Using “LUMIX Tether” with a Wired LAN Connection: F-21
- Support for Remote Control of Multiple Cameras: F-23

Connect the camera and a PC with a LAN cable, then use the “LUMIX Tether” camera control software to control your camera remotely.

- Use the latest version of “LUMIX Tether”.
- Refer to the operation guide of “LUMIX Tether” for instructions on how to operate “LUMIX Tether”.

F-19
Firmware Ver. 1.1 – Support for “LUMIX Tether” Wired LAN Connections

[Tether(USB ethernet adaptor)] Has Been Added

This enables connection to “LUMIX Tether” with a wired LAN connection.

Cookie button → [Wi-Fi] → [USB] → Select [Tether(USB ethernet adaptor)]

Settings: [ON]/[OFF]

• When this function is not to be used, set this setting to [OFF]. When set to [ON], power is supplied from the battery of this camera to the connected device, so the battery will be consumed faster.
• When using “LUMIX Tether” with a wired LAN connection, the following functions are not available:
  – [Wi-Fi Function] ([LAN / Wi-Fi])
  – [Bluetooth]
Using “LUMIX Tether” with a Wired LAN Connection

1. Set the camera as a DHCP server.
   - [LAN / Wi-Fi] [IP Address Setting (LAN)] [DHCP Server]
   - If you have modified settings in [IP Address Setting (LAN)], turn the camera off and on again.

2. Set to wired LAN tethering connection.
   - [USB] [Tether(USB ethernet adaptor)] [ON]

(A) USB port
(B) USB ethernet adaptor (commercially available)
(C) LAN cable
(D) A PC on which “LUMIX Tether” is installed
3 Connect the commercially available USB ethernet adaptor to the camera, then use a LAN cable to connect the camera and the PC.

4 Use “LUMIX Tether” to remotely control the camera.
   • (Initial connection) Set the password to be used to connect from “LUMIX Tether” to the camera. (Between 8 and 31 characters)
   • [ ] is displayed on the top right of the camera’s screen.
Support for Remote Control of Multiple Cameras

A number of cameras can be remotely controlled using “LUMIX Tether”.

(A) USB ethernet adaptor (commercially available)
(B) LAN cable
(C) Router (or hub)
(D) A PC on which “LUMIX Tether” is installed

For example: When there is a DHCP server in the LAN, and the camera is to be connected as a DHCP client

1 Set the camera as a DHCP client (default setting).
   • [ ] ⇒ [ ] ⇒ [LAN / Wi-Fi] ⇒ [LAN / Wi-Fi Setup] ⇒ [IP Address Setting (LAN)] ⇒ [DHCP Client]

   • If there is no DHCP server in the LAN, it is also possible to make the connection by setting one camera as [DHCP Server], and the remainder as [DHCP Client].
   • If you have modified settings in [IP Address Setting (LAN)], turn the camera off and on again.
2 Do the operations in “Using “LUMIX Tether” with a Wired LAN Connection” from Step 2.
   - Connect the cameras, PC, and router (hub) according to the above diagram.
   - You can operate “LUMIX Tether” and remotely control all connected cameras as a group, or select any individual camera to control remotely.

- When recording with multiple tethered cameras, we recommend allocating unique device names to each of the cameras:
  [ ] [ ] [LAN / Wi-Fi] [LAN / Wi-Fi Setup] [Device Name]
Precautions When Inserting a Battery into the Camera for Charging

After connecting via wired LAN or USB tethering, when charging the battery in the camera, make sure that the charging light of the camera lights red.
If the charging light does not light, reconnect the USB connection cable while the camera is turned off.
[Live View Composite] Has Been Added

Images are recorded over several times and only the parts that change to become brighter form part of the composition. The images composed by recording at a set exposure time (shutter speed) are displayed, allowing the images to be confirmed as recording proceeds. This allows you to reduce the overall brightness for recording, so it is convenient for recording the light trails of stars or fireworks against a bright nightscape.

- Use a tripod to minimize camera shake.

1. Set the mode dial to [M].
2. Set [Live View Composite].

```
[M] → [ ] → [ ] → [Live View Composite]
```

![Live View Composite Menu]
3 **Start Live View Composite recording.**
   - Select [Start] and then press 📸 or 🎥.

4 **Decide on the composition and then fix the camera in place.**

5 **Set the shutter speed and ISO sensitivity.**
   - Rotate ⏰ to set the shutter speed.
     - The shutter speed can be set in the range between 60 seconds and 1/2 of a second.
   - Press [ISO], then rotate ⏪, ⏫, ⏫, or ⏪ to set the ISO sensitivity.
     - The ISO sensitivity can be set in the range between [200] and [1600] ([100] and [1600] when [Extended ISO] is set).

6 **Get the image to use for noise reduction.**
   - Press the shutter button fully.
7 **Start recording.**
- Press the shutter button fully.
- Recording is done according to the settings in Step 5, and images processed with noise reduction are merged a frame at a time.

(A) Histogram display
(B) Shutter speed x Number of images merged
(C) Elapsed time

8 **Stop recording.**
- Press the shutter button fully.
- A maximum of 3 hours can be recorded with one Live View Composite recording. (Recording automatically ends when the time exceeds 3 hours.)

9 **End [Live View Composite].**
- Press [Q].

uder Items ([Live View Composite])

<table>
<thead>
<tr>
<th>Setting Items ([Live View Composite])</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Start</strong></td>
<td>Starts Live View Composite recording.</td>
</tr>
<tr>
<td><strong>Shutter Delay</strong></td>
<td>Sets the delay time from when the shutter button is pressed until the shutter is released.</td>
</tr>
<tr>
<td>[SEC]/[4 SEC]/[2 SEC]/[1 SEC]/[OFF]</td>
<td></td>
</tr>
</tbody>
</table>
- [Long Exposure NR] will be [ON].
- When recording with the flash, the flash fires only in the first frame.
- [Flash Synchro] is fixed to [1ST].
- The image for noise reduction is discarded when you do the following. Do Step 6 again.
  - Modify the shutter speed/ISO sensitivity
  - Switch the playback mode
- When pressing the shutter button fully to end recording, the last image may not be merged.
- During Live View Composite recording, audio is not output to an external device connected by HDMI.
- [Power Save Mode] does not work.
- [Live View Composite] is not available when using the following functions:
  - [ELEC.]/[ELEC.+NR] ([Shutter Type])
  - [Filter Settings]
  - [Silent Mode]
  - [Multiple Exposure]
- When using [Live View Composite], the following functions are not available:
  - Burst recording
  - [6K/4K PHOTO]
  - [Post-Focus]
  - [Time Lapse Shot]
  - [Stop Motion Animation]
  - [Self Timer]
  - [AF mode]
  - [ISO Sensitivity (photo)]
  - [i.Dynamic Range]
  - [Filter Effect]
  - [Bracketing]
  - [Silent Mode]
  - [Shutter Type]
  - [Shutter Delay]
  - [Multiple Exposure]
Rotational Angle to [Focus Ring Control] Has Been Added

When [Focus Ring Control] is set to [LINEAR], it is now possible to set the rotational angle of the focus ring to a maximum of 1080 degrees.

⇒ [()] ⇒ [()] ⇒ [Focus Ring Control] ⇒ Select [SET]

Settings: [NON-LINEAR]/[LINEAR]/[SET] (90° to 1080°, Maximum)
**Added Menus**

Specifications information for the menus added by the firmware update.

- **List of Default Settings/Custom Saving/Settings Available for Copying**
  
  - Using [Reset], the function to return to default settings
  - Using [Save to Custom Mode], the function to save settings details in the Custom mode
  - Using [Save/Restore Camera Setting], the function to copy settings details
