*1: When the standby mode is set to eco, LAN-based network functions such as the standby on function will not operate and only certain commands can be received from RS-232C control.
*2: Measurement, measuring conditions, and method of notation all comply with ISO 21118 international standards.
***3: Protruding parts not included.**
*4: Average value. May differ depending on models.
*5: The operating temperature range is 0°C to 35°C (32°F to 95°F) when used in High-Altitude mode (1,400 m to 2,700 m (4,593 ft to 8,858 ft)). Also, if the ambient temperature exceeds 35°C (95°F) (30°C (86°F) in High-Altitude mode) when the lamp power mode is set to NORMAL, the light output may be reduced approximately 30% to protect the projector.

* **This distance is especially recommended for ceiling-mounted use and other permanent installations.**

NOTE:

Values shown are approximate.

The value for L (distance to screen) varies slightly depending on the zoom lens characteristics.

When the shortest projection distance is used, a small amount of distortion may occur in the image due to the zoom lens characteristics.

Calculation of the projection distance

For a screen size different from the above, use the equation below to calculate the projection distance.

Aspect ratio 4 : 3
minimum   L (m) = (diagonal screen size in inches) × 0.0302 − 0.035
maximum   L (m) = (diagonal screen size in inches) × 0.0358 − 0.035
Aspect ratio 16 : 9
minimum   L (m) = (diagonal screen size in inches) × 0.0330 − 0.041
maximum   L (m) = (diagonal screen size in inches) × 0.0391 − 0.040
NOTE: Distances calculated with the above equations will include a slight error.

Installable angle

Install the projector at an angle within the range shown below.

• Vertical direction
The projector may be installed at a vertical angle of ±30°.

Computer data compatibility

This projector accepts up to 91 kHz horizontal scanning frequency and 193 MHz dot clock.

NOTE: Pixel thinning is applied to signals that exceed a dot clock frequency of 170 MHz. The display resolution of this projector is 1,024 × 768 pixels. Input signals that exceed this resolution will be converted to 1,024 × 768 pixels.

NOTE
- If a wrong command is received, the projector will send an ER401 command to the computer.
- If a wrong parameter is received, the projector will send an ER402 command to the computer.

CAUTION
- It may not be possible to send or receive commands for about 10 to 60 seconds when the lamp is first turned on. If this occurs, wait for 60 seconds, then try sending or receiving again.
- When sending multiple commands, be sure to wait for at least 0.5 second after receiving a response from the projector before sending the next command.
- Additional time is sometimes required for response due to processing inside the projector. Set the time-out period for command response to 10 seconds or more.

[1] Do not send PON, POF, or OSH commands continuously in a short period of time (0.5 second or less). Doing so may burst the lamp or shorten the lamp replacement cycle.

[2] These commands are effective when the standby mode is set to eco. (Other commands are not effective.)

Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Never place objects on top of the projector.
2. Make sure there is an unobstructed space of 500 mm (19-11/16″) or more around the projector's exhaust openings. Also, make sure there is an efficient space for replacing lamp units or detaching or attaching the air filter.
3. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
4. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.

Operating the projector continuously

1. If the projector is to be operated continuously 10 hours or more, lamp replacement cycle duration becomes shorter.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods (one hour or less).
